

Valid Microsoft AZ-800 Exam Prep - AZ-800 Reliable Study Guide

What's more, part of that 2Pass4sure AZ-800 dumps now are free: <https://drive.google.com/open?id=1JcYnzRoQ3gfFgsSmi5cn-nWA69IGnw0H>

2Pass4sure offers actual and updated Microsoft AZ-800 Dumps after seeing the students struggling to prepare quickly for the test. We have made this product after consulting with a lot of professionals so the students can be successful. 2Pass4sure has hired a team of professionals who work on a daily basis without caring about themselves to update the Microsoft AZ-800 practice material.

Microsoft AZ-800 exam is designed for IT professionals who want to demonstrate their skills in administering Windows Server hybrid core infrastructure. AZ-800 exam is part of the Microsoft Certified: Azure Stack HCI Administrator Associate certification, which validates the candidate's expertise in managing and monitoring servers, storage, and networking in a hybrid environment. The AZ-800 exam measures the candidate's abilities to configure and maintain Windows Server infrastructure, implement high availability and disaster recovery solutions, and manage virtual machines and containers.

Microsoft AZ-800 certification exam is a valuable credential for IT professionals who are looking to enhance their skills in managing and maintaining hybrid environments. With a solid understanding of Windows Server administration and experience working with cloud-based solutions, candidates can demonstrate their expertise and advance their careers.

The AZ-800 Exam covers a wide range of topics, including implementing and managing storage, virtualization, networking, and security solutions. Candidates are also tested on their ability to deploy and manage Azure services in a hybrid environment, as well as their knowledge of Azure Stack HCI management tools and features. AZ-800 exam is ideal for IT professionals who work with Windows Server 2019 and Azure technologies and want to enhance their skills and advance their careers.

With our AZ-800 exam questions, you will find the exam is just a piece of cake. What are you still hesitating for? Hurry to buy our AZ-800 learning engine now!

Microsoft Administering Windows Server Hybrid Core Infrastructure Sample Questions (Q49-Q54):

NEW QUESTION # 49

You have an on-premises server named Server1 that runs Windows Server. You have an Azure virtual network that contains an Azure virtual network gateway. You need to connect only Server1 to the Azure virtual network. What should you use?

- A. Azure Network Adapter
- B. Azure Extended Network

- C. an ExpressRoute circuit
- D. a Site-to-SiteVPN

Answer: A

Explanation:

Reference:

<https://docs.microsoft.com/en-us/windows-server/manage/windows-admin-center/azure/use-azure-network-adapter>

NEW QUESTION # 50

You create a new Azure subscription.

You plan to deploy Azure Active Directory Domain Services (Azure AD DS) and Azure virtual machines. The virtual machines will be joined to Azure AD DS.

You need to deploy Active Directory Domain Services (AD DS) to ensure that the virtual machines can be deployed and joined to Azure AD DS.

Which three actions should you perform in sequence? To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.

Answer:

Explanation:

NEW QUESTION # 51

SIMULATION

You need to configure Hyper-V to ensure that running virtual machines can be moved between SRV1 and SRV2 without downtime.

You do NOT need to move any virtual machines at this time.

To complete this task, sign in the required computer or computers.

Answer:

Explanation:

Windows Server, Hyper-V, Set up hosts for live migration without Failover Clustering You can set up hosts that aren't clustered so you can do live migrations between them.

Phase 1: Configure constrained delegation (optional) [Skip]

If you have decided to use Kerberos to authenticate live migration traffic, configure constrained delegation using an account that is a member of the Domain Administrators group.

Phase 2: Set up the source and destination computers for live migration This step includes choosing options for authentication and networking.

Use Hyper-V Manager to set up the source and destination computers for live migration Step 1: Open Hyper-V Manager. (From Server Manager, click Tools >>Hyper-V Manager.) Step 2: In the navigation pane, select one of the servers. (If it isn't listed, right-click Hyper-V Manager, click Connect to Server, type the server name, and click OK. Repeat to add more servers.) [Here: SRV1]

Step 3: In the Action pane, click Hyper-V Settings >>Live Migrations.

Step 4: In the Live Migrations pane, check Enable incoming and outgoing live migrations.

Step 5: Under Simultaneous live migrations, specify a different number if you don't want to use the default of 2.

Step 6: Under Incoming live migrations, if you want to use specific network connections to accept live migration traffic, click Add to type the IP address information. Otherwise, click Use any available network for live migration. Click OK.

Step 7: To choose Kerberos and performance options, expand Live Migrations and then select Advanced Features.

If you have configured constrained delegation, under Authentication protocol, select Kerberos.

Under Performance options, review the details and choose a different option if it's appropriate for your environment.

Step 8: Click OK.

Step 9: Select the other server [Here SRV2] in Hyper-V Manager and repeat the steps.
