

2026 RedHat Pass-Sure EX380: Reliable Red Hat Certified Specialist in OpenShift Automation and Integration Dumps Free

P.S. Free 2026 RedHat EX380 dumps are available on Google Drive shared by Exam4Free: https://drive.google.com/open?id=12Li7Fp8_XNt07Kshsj7dPkGFN8wsBda

If you still spend a lot of time studying and waiting for EX380 qualification examination, then you need our EX380 test prep, which can help solve all of the above problems. I can guarantee that our study materials will be your best choice. Our EX380 valid practice questions have three different versions, including the PDF version, the software version and the online version, to meet the different needs, our EX380 Study Materials have many advantages, and you can free download the demo of our EX380 exam questions to have a check.

To gain a full understanding of our product please firstly look at the introduction of the features and the functions of our EX380 exam torrent. The page of our product provide the demo and the aim to provide the demo is to let the you understand part of our titles before their purchase and see what form the software is after the you open it. The client can visit the page of our product on the website. So the client can understand our EX380 Quiz torrent well and decide whether to buy our product or not at their wishes. The client can see the forms of the answers and the titles.

New EX380 Test Cost, EX380 Top Exam Dumps

All of our EX380 pdf torrent are up-to-date and reviewed by our IT experts and professionals. We have written our EX380 study guide in such a way that you don't need to prepare anything else after practice our EX380 Exam Questions. You can pass the real exam easily with our latest EX380 vce dumps and this is the only smartest way to get success. Just contact us if you have any questions.

RedHat Red Hat Certified Specialist in OpenShift Automation and Integration Sample Questions (Q12-Q17):

NEW QUESTION # 12

Node Management - Remove Taint on Worker Node

Answer:

Explanation:

See the solution below in Explanation:

Explanation:

Step 1: Log in to the OpenShift web console with an account that has sufficient cluster administrative privileges.

This Task is performed from the GUI, not the CLI. The lab hint explicitly places this under the worker node details page in the console.

Step 2: Navigate to Compute .

This area contains node-level resources, including control plane and worker nodes.

Step 3: Open Nodes .

Here you can view all nodes currently registered in the cluster.

Step 4: Select the required worker node .

Choose the exact worker node referenced by the lab Task SIMULATION .

Step 5: Open the Details tab.

The taint configuration is managed from the selected node's details view.

Step 6: Locate the Taints section and click Edit .

A taint is used to control pod scheduling. If a worker has a taint, pods without matching tolerations may not schedule there.

Step 7: Remove the unwanted taint entry.

Removing the taint makes the worker eligible again for normal scheduling behavior, depending on the rest of the cluster policy.

Step 8: Click Save .

This commits the change so the node is updated and the scheduler can evaluate it without that taint.

NEW QUESTION # 13

Identity Management - Create CA ConfigMap

Answer:

Explanation:

See the solution below in Explanation:

Explanation:

Step 1: Ensure the certificate file rhds_ca.crt is available in your current working directory or use the correct path.

The Task requires creating a configmap from this CA certificate file.

Step 2: Run the command:

oc create configmap rhds-ca-config-map --from-file ca.crt=rhds_ca.crt -n openshift-config Step 3: Confirm the configmap is created.

The lab output shows:

```
configmap/rhds-ca-config-map created
```

Detailed explanation:

This creates a configmap named rhds-ca-config-map in the openshift-config namespace and maps the local file rhds_ca.crt to the key name ca.crt inside the configmap. This is important in external identity integration because OpenShift may need to trust a custom certificate authority when communicating with LDAP or another secured external service. By placing the certificate in a configmap, the authentication operator or related cluster configuration can reference it cleanly. The key name matters because many OpenShift resources expect a CA bundle key with a specific filename-like convention. If the file path is wrong, the command fails immediately. If the configmap name or key mapping is wrong, the authentication provider referencing it may not trust the external endpoint.

NEW QUESTION # 14

Configure log forwarding to an external endpoint

Task Information : Configure Cluster Logging to forward application logs to an external output using ClusterLogForwarder.

Answer:

Explanation:

See the solution below in Explanation:

Explanation:

- * Verify logging namespace and resources
- * oc get ns openshift-logging
- * oc -n openshift-logging get clusterlogforwarder
- * ClusterLogForwarder configures pipelines and outputs.
- * Create/Edit ClusterLogForwarder (example structure)
- * Define an output (external system) and pipeline selecting application logs.

- * Apply via YAML:
- * `oc -n openshift-logging apply -f clusterlogforwarder.yaml`
- * Validate collector pods are healthy
- * `oc -n openshift-logging get pods`
- * Forwarding relies on collectors (vector/fluentd depending config).
- * Generate a test log line
- * `oc -n openshift-logging run logger --image=busybox --restart=Never -- /bin/sh -c 'echo hello- forwarding; sleep 5'`
- * This creates a known message to search in the external endpoint.
- * Confirm logs arrive at destination
- * Use your external system's query/search to confirm hello-forwarding.

NEW QUESTION # 15

Configure BackupStorageLocation and VolumeSnapshotLocation

Task Information : Configure OADP/Velero storage locations and confirm they show as Available.

Answer:

Explanation:

See the solution below in Explanation:

Explanation:

- * Create a secret for cloud credentials (S3-compatible example)
 - * `oc -n openshift-adp create secret generic cloud-credentials \`
 - * `--from-file=cloud=/path/to/credentials`
 - * Velero uses this secret to authenticate to object storage.
 - * Create/Update the DataProtectionApplication (DPA)
 - * Apply a DPA CR that defines:
 - * backupLocations (bucket, endpoint URL, region, etc.)
 - * snapshotLocations (if using snapshots)
 - * Verify BackupStorageLocation and SnapshotLocation
 - * `velero backup-location get`
 - * `velero snapshot-location get`
 - * Status should be Available, meaning storage config is valid.
-

NEW QUESTION # 16

Logging Configuration - Configure ClusterLogging in Web Console

Answer:

Explanation:

See the solution below in Explanation:

Explanation:

Step 1: Log in to the OpenShift web console.

This Task is explicitly defined as a GUI workflow.

Step 2: Navigate to Operators .

Installed logging components are managed through the operator framework.

Step 3: Open Installed Operators .

This lists operators already deployed in the cluster.

Step 4: Select Red Hat OpenShift Logging .

This operator manages the cluster logging stack and its custom resources.

Step 5: Open the ClusterLogging instance.

The Task SIMULATION refers to editing the existing ClusterLogging custom resource.

Step 6: Switch to YAML View .

This allows direct editing of the logging custom resource specification.

Step 7: Edit the collection type and set it to vector.

This changes the log collector implementation.

Step 8: Click Save .

The operator will reconcile the resource and apply the updated collector configuration.

Detailed explanation:

The ClusterLogging custom resource controls the logging stack behavior in OpenShift. Changing the collection type to vector updates which collector technology is used for gathering node and container logs. In operator-managed platforms, direct YAML edits to the custom resource are the preferred method for changing managed behavior because the operator then applies and maintains the desired state. This Task tests both navigation skills in the web console and knowledge of where logging behavior is configured. Saving the resource triggers reconciliation, which is a core OpenShift operator pattern: the declared configuration is read and enforced by the operator rather than by manual per-pod changes.

NEW QUESTION # 17

.....

EX380 learning materials have a variety of self-learning and self-assessment functions to test learning outcomes. EX380 study guide is like a tutor, not only gives you a lot of knowledge, but also gives you a new set of learning methods. EX380 Exam Practice is also equipped with a simulated examination system that simulates the real exam environment so that you can check your progress at any time.

New EX380 Test Cost: <https://www.exam4free.com/EX380-valid-dumps.html>

RedHat Reliable EX380 Dumps Free The validity and reliability are without a doubt, RedHat Reliable EX380 Dumps Free i have gone through almost 528 numbers of questions and the corresponding answers were relevant, After you buy our New EX380 Test Cost - Red Hat Certified Specialist in OpenShift Automation and Integration latest torrent vce, we still pay attention to your satisfaction on our New EX380 Test Cost - Red Hat Certified Specialist in OpenShift Automation and Integration practice demo pdf as we committed, RedHat Reliable EX380 Dumps Free What you need to do is to spend some time to practice.

To choke the ellipse, change the stroke color of the EX380 Top Exam Dumps ellipse to the same as the background color, First, you need not produce a Creation Method for every object configuration: you can write Creation Methods for the EX380 Official Practice Test most popular configurations and leave some public constructors around to handle the rest of the cases.

Updated RedHat EX380 Questions - Fast Track To Get Success

The validity and reliability are without a doubt, EX380 Official Practice Test i have gone through almost 528 numbers of questions and the corresponding answers were relevant, After you buy our Red Hat Certified Specialist in OpenShift Automation and Integration latest torrent vce, Reliable EX380 Dumps Free we still pay attention to your satisfaction on our Red Hat Certified Specialist in OpenShift Automation and Integration practice demo pdf as we committed.

What you need to do is to spend some EX380 time to practice, We also will check the updates at any time every day.
