The screenshot displays the Fortinet FGT interface for configuring an Azure Connector and viewing application registration keys. The 'FGT connector settings' section includes fields for 'Server region' (Global), 'Directory ID' (60b93279-efda-45f5-9c1d-e7f999c), 'Application ID' (e7ac2b2f-25b1-4e66-96b4-9dbc90e), 'Client secret' (redacted with a message 'This field is required.'), 'Resource path' (checked), 'Subscription ID' (9a359c2e-e035-4d1e-ba17-0b600cb2), and 'Resource group' (SxLab). The 'Application registration key' section shows a table of client secrets, with one entry 'FortGateKey' having an expiration date of 12/31/2299 and a value of 'application secret' highlighted with a red box.

Description	Expires	Value	ID
FortGateKey	12/31/2299	application secret	

You are configuring an SDN connector for Azure on a FortiGate device. You completed all the required steps on the Azure side. While configuring the FortiGate side, you notice that you did not save the client secret used in the Azure App Registration. What is the quickest way to obtain the value of the client secret?

- A. Create a new resource group
- **B. Create a new client secret**
- C. Create a new app registration
- D. Create a new external connector for Azure

정답: B

설명:

Azure does not allow you to view an existing client secret's value after creation for security reasons. If you did not save the client secret when it was first generated, the quickest and only option is to create a new client secret under the existing app registration and use the new value in your FortiGate configuration.
