<https://drive.google.com/open?id=1ehB-PSpQUd62pvSW3GABrqLr0AxHFAyh>

Pass4Test는 많은 분들이Zscaler인증ZDTA시험을 응시하여 성공하도록 도와주는 사이트입니다Pass4Test의 Zscaler인증ZDTA 학습가이드는 시험의 예상문제로 만들어진 아주 퍼펙트한 시험자료입니다. Zscaler인증ZDTA시험은 최근 가장 인기있는 시험으로 IT인사들의 사랑을 독차지하고 있으며 국제적으로 인정해주는 시험이라 어느 나라에서 근무하나 제한이 없습니다. Pass4Test로 여러분은 소유하고 싶은 인증서를 빠른 시일내에 얻게 될것입니다.

Zscaler ZDTA 시험요강:

주제	소개
주제 1	Platform Services: This section measures skills of Cloud Infrastructure Engineers and focuses on the suite of Zscaler platform services. Key topics include advanced device posture assessments, TLS inspection mechanics, and the application of policy frameworks governing internet, private access, and digital experience services.
주제 2	Risk Management: This domain measures skills of Risk Managers and Security Architects in using Zscaler's comprehensive risk management suite. Candidates are expected to understand risk capabilities, dashboards, asset and financial risk insights, vulnerability management, deception tactics, identity protection, and breach prediction analytics.

주제 3	• Cyberthreat Protection Services: This domain targets Cybersecurity Analysts and covers broad cybersecurity fundamentals and advanced threat protection capabilities. Candidates must know about malware protection, intrusion prevention systems, command and control channel detection, deception technologies, identity threat detection and response, browser isolation, and incident detection and response. • Data Protection Services
주제 4	• Zscaler Zero Trust Automation: This part measures Automation Engineers on their ability to utilize Zscaler APIs, including the One API framework, for automating zero trust security functions and integrating with broader enterprise security and orchestration tools.
주제 5	• This section assesses Data Protection Officers on techniques to secure data across motion, SaaS, cloud, and endpoints using Zscaler's AI-driven data discovery and data protection technologies. It involves securing BYOD environments and understanding risk management to protect sensitive information.

ZDTA시험정보 - ZDTA학습자료

Pass4Test의 Zscaler인증 ZDTA덤프를 구매하시고 공부하시면 밝은 미래를 예약한것과 같습니다. Pass4Test의 Zscaler인증 ZDTA덤프는 고객님의 시험에서 통과하여 중요한 IT인증자격증을 취득하게끔 도와드립니다. IT인증자격증은 국제적으로 인정받기에 취직이나 승진 혹은 이직에 힘을 가해드립니다. 학원공부나 다른 시험자료가 필요없이 Pass4Test의 Zscaler인증 ZDTA덤프만 공부하시면 Zscaler인증 ZDTA시험을 패스하여 자격증을 취득할수 있습니다.

최신 Digital Transformation Administrator ZDTA 무료샘플문제 (Q105-Q110):

질문 # 105

A user is accessing a private application through Zscaler with SSL Inspection enabled. Which certificate will the user see on the browser session?

- A. Real Server Certificate
- **B. Zscaler generated MITM Certificate**
- C. No certificate, as the session is decrypted by the Service Edge
- D. A self-signed certificate from Zscaler

정답: B

설명:

When SSL Inspection is enabled and a user accesses a private application through Zscaler, the user will see a Zscaler generated MITM (Man-In-The-Middle) Certificate on their browser session. Zscaler intercepts and decrypts SSL/TLS traffic at the Service Edge and then re-encrypts it before forwarding it to the client, presenting its own certificate to maintain the security of the connection while enabling inspection.

This allows Zscaler to inspect encrypted traffic for threats and policy enforcement transparently without exposing the original server's certificate. The study guide clarifies this mechanism under SSL Inspection details.

질문 # 106

What can Zscaler Client Connector evaluate that provides the most thorough determination of the trust level of a device as criteria for an access policy enabling remote access to sensitive private applications?

- A. Client Type
- B. Trusted Network
- **C. Posture Profiles**
- D. SCIM User Attributes

정답: C

설명:

Posture Profiles give a comprehensive view of a device's security state - checking OS version, patch level, antivirus status, disk encryption, and more - making them the richest criteria for trust decisions in access policies for sensitive private apps.

질문 # 107

How is data gathered with ZDX Advanced client performance?

- A. By generating synthetic transactions to designated Internet and Private applications every 5 minutes and measuring the performance of those sessions.
- B. By constantly analyzing live user sessions to critical SaaS applications and measuring the performance of those sessions.
- C. By using AI predictive analysis ZDX can extrapolate near-term client performance based upon recent past data observed.
- **D. By constantly analyzing live user sessions to both Internet and Private applications and measuring the performance of those sessions.**

정답: D

설명:

ZDX Advanced gathers data by constantly analyzing live user sessions to both Internet and Private applications and measuring the performance of those sessions. This real-time monitoring provides accurate and up-to-date performance metrics, enabling quick identification and resolution of client-side performance issues.

The study guide states that synthetic transactions are a feature but the primary data collection for client performance is through live session analysis, ensuring precise user experience monitoring.

질문 # 108

An organization has more than one ZIA instance, each on different clouds. The organization is using the same login domain for both and upon login users are given this menu in ZCC asking which cloud they would like to join. What steps could an Administrator take to avoid having this menu appear?

- **A. Customize an MSI version of the ZCC file specifying the CLOUDNAME variable.**
- B. Customize an MSI version of the ZCC file specifying the USERDOMAIN variable.
- C. Create only one SAML integration with the desired ZIA instance.
- D. Federate the login domain between two different IDP instances.

정답: A

설명:

To avoid prompting users with a cloud selection menu in the Zscaler Client Connector (ZCC), administrators should customize the MSI installation package with the CLOUDNAME parameter. This setting ensures the ZCC automatically connects to the correct ZIA cloud instance without user intervention. The CLOUDNAME corresponds to the designated cloud name for the organization's ZIA tenant, effectively bypassing the prompt.

This is outlined under Zscaler's deployment and configuration instructions for ZCC.

질문 # 109

What enables zero trust to be properly implemented and enforced between an originator and the destination application?

- A. Trusted network criteria designate the locations of originators which can be trusted.
- B. Connectivity between the originator and the destination application is over IPSec tunnels.
- **C. Access is granted without sharing the network between the originator and the destination application.**
- D. Cloud firewall policies ensure that only authenticated users are allowed access to destination applications.

정답: C

설명:

Zero Trust is achieved by granting users application-level access without ever placing them on the same network as the destination, ensuring users can reach only the specific app and never the underlying network.
