

1z1-076 Latest Exam Questions, Reliable 1z1-076 Exam Test

Oracle 1Z0-076 Certification Exam Syllabus and Exam Questions

Oracle 1Z0-076 Exam

www.DBExam.com
Get complete detail on 1Z0-076 exam guide to crack Oracle Database 19c - Data Guard Administration. You can collect all information on 1Z0-076 tutorial, practice test, books, study material, exam questions, and syllabus. Firm your knowledge on Oracle Database 19c - Data Guard Administration and get ready to crack 1Z0-076 certification. Explore all information on 1Z0-076 exam with number of questions, passing percentage and time duration to complete test.

P.S. Free 2026 Oracle 1z1-076 dumps are available on Google Drive shared by Pass4guide: <https://drive.google.com/open?id=1xPavEWjdFvpKSLHOCP4rJiFhxEARpkEk>

If you still have no confidence for passing test, here we will recommend you an excellent reference material. Our valid 1z1-076 exam collection pdf will help you pass exam and go to success, you will approach to IT field top. You can just spend short time in preparing for real test with our latest 1z1-076 Exam Collection Pdf. You can download free demo in our website for your reference to verify the reliability of our dumps before purchasing.

All operating systems also support this web-based 1z1-076 practice test. The third format is desktop Oracle 1z1-076 practice exam software that can be accessed easily after installing it on your Windows PC or Laptop. These formats are there so that the students can use them as per their unique needs and prepare successfully for Oracle Database 19c: Data Guard Administration (1z1-076) the on first try.

Oracle 1z1-076 Exam Dumps Are Available At A Cheap Price

Nowadays, using electronic materials to prepare for the exam has become more and more popular, so now, you really should not be restricted to paper materials any more, our electronic 1z1-076 exam torrent will surprise you with their effectiveness and usefulness, and the pass rate of 1z1-076 Practice Test is high as 98% to 100%. I can assure you that you will pass the exam as well as getting the related certification under the guidance of our training materials 1z1-076 as easy as pie.

Oracle 1z1-076 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none">Creating a Logical Standby Database: This topic guides users through the process of creating and managing a logical standby database, including SQL Apply filtering.
Topic 3	<ul style="list-style-type: none">Oracle Data Guard Broker Basics: An overview of the Data Guard broker, its architecture, components, benefits, and configurations, is provided here. It serves as an introduction to the tool used for managing Data Guard configurations.
Topic 4	<ul style="list-style-type: none">Using Flashback Database in a Data Guard Configuration: This topic covers the configuration and advantages of using Flashback Database in a Data Guard setup, as well as the process of enabling fast-start failover for seamless role changes.
Topic 5	<ul style="list-style-type: none">Performing Role Transitions: Here, the concept of database roles is explained, along with the steps for performing switchovers, failovers, and maintaining physical standby sessions during role transitions.
Topic 6	<ul style="list-style-type: none">Oracle Data Guard Basics: This topic covers the essential architecture and concepts of Oracle Data Guard. It includes sub-topics such as the physical and logical standby database comparison, benefits of Data Guard, and its integration with multi-tenant databases.
Topic 7	<ul style="list-style-type: none">Managing Oracle Net Services in a Data Guard Environment: The section focuses on Oracle Net Services and its role in Data Guard networking setup.

Oracle Database 19c: Data Guard Administration Sample Questions (Q74-Q79):

NEW QUESTION # 74

Which two statements are true regarding asynchronous redo transport in a Data Guard

- A. This transport mode satisfies the minimum requirements for Maximum Availability data protection mode.
- B. The performance of SQL apply on a logical standby database always improves when using this transport mode.
- C. This transport mode satisfies the minimum requirements for Maximum Performance data protection mode.
- D. Real-time query performance on a physical standby database improves for current read requests when using this transport mode.
- E. A transaction can commit without waiting for redo to be sent to any standby database in the data guard configuration.

Answer: C,E

Explanation:

Asynchronous redo transport is a method where the primary database does not wait for an acknowledgment from the standby database before committing transactions, which helps in minimizing the impact on the primary database's performance (B). This transport mode is associated with the Maximum Performance data protection mode, which prioritizes performance over synchronicity of data between the primary and standby databases (C). While it provides a level of data protection, there could be some data loss in the event of a primary database failure because redo data may not have been transmitted to the standby database at the time of the failure.

Reference:

Oracle Data Guard Concepts and Administration documentation provides detailed explanations of different redo transport modes and their implications on data protection and performance. Asynchronous transport mode's behavior and association with Maximum Performance mode are outlined explicitly.

NEW QUESTION # 75

Which THREE statements are true..... open in real time query mode, which becomes a new.

- A. All sessions are disconnected and all
- B. User sessions and Current Buffers are maintained by default.

- C. User sessions can be retained.
- D. Sessions that are using database links
- E. Sessions that have long running queries can be retained.
- F. All current buffers can be retained.

Answer: A,C,F

Explanation:

When a physical standby database is opened in real-time query mode, which may be referred to as real-time apply when using Active Data Guard, certain operations can disrupt ongoing sessions. However, with features like Application Continuity and the proper configuration of initialization parameters such as STANDBY_DB_PRESERVE_STATES, user sessions and current buffers may be preserved during role transitions such as a switchover or failover. Specifically, the STANDBY_DB_PRESERVE_STATES parameter can be set to preserve none, all, or only user sessions during such transitions. This ensures that in-flight transactions are not lost and that users do not experience disruptions during the role transitions of a physical standby database.

NEW QUESTION # 76

Examine this validate command:

DGMGRL> VALIDATE DATABASE VERBOSE "<database name>";

Which THREE statements are TRUE?

- A. The command can be used for a logical standby database.
- B. The command uses information available in various Oracle Data Guard views as well as the Automatic Diagnostic Repository.
- C. The command performs network connectivity checks between members of a broker configuration.
- D. The command performs a comparison of SPFILE entries between the primary database and a specified standby database.
- E. The command performs a comprehensive set of database checks prior to a role change.

Answer: A,C,E

Explanation:

The command performs a comprehensive set of database checks prior to a role change (A): The VALIDATE DATABASE command in Data Guard Manager (DGMGRL) is designed to perform an exhaustive check of a specified database's readiness for a role change, such as a switchover or failover.

The command performs network connectivity checks between members of a broker configuration (C): One of the checks includes verifying that the necessary network connectivity exists between the databases in a Data Guard Broker configuration.

The command can be used for a logical standby database (D): The VALIDATE DATABASE command is versatile and can be used for both physical and logical standby databases to ensure their readiness for role changes.

NEW QUESTION # 77

Which two are true about managing and monitoring Oracle container databases in a Data Guard environment using the broker?

- A. All broker actions execute at the root container for container databases.
- B. After a role change, the broker opens all Pluggable databases (pdbb) on the new primary.
- C. If the primary database is a container database, then a logical standby may be a non-container database.
- D. If the primary database is not a container database, then a standby may be a container database.
- E. If the primary database is a container database, then a physical standby may be a non-container database.

Answer: A,B

Explanation:

In the context of Oracle Data Guard and container databases (CDBs) managed by Data Guard Broker:

All broker actions execute at the root container for container databases (D): When using Data Guard Broker to manage a CDB, the

actions performed by the broker are executed at the level of the root container. This is because the root container maintains the control and configuration information that applies to the entire CDB, including all of its pluggable databases (PDBs). After a role change, the broker opens all Pluggable databases (PDBs) on the new primary (E): Following a role transition such as a switchover or a failover, Data Guard Broker ensures that all PDBs within the CDB of the new primary database are opened, which is essential to resume operations of the PDBs without manual intervention.

NEW QUESTION # 78

Which three are prerequisites for enabling Fast-Start Failover?

- A. A static service name must be configured only for the Fast-Start Failover target standby database.
- B. Flashback Database must be enabled on the primary database.
- C. The Fast-Start Failover target standby database must receive REDO synchronously when the configuration operates in Maximum Availability mode.
- D. Flashback Database must be enabled on the Fast-Start Failover target standby database.
- E. The Fast-Start Failover target standby database may receive REDO either synchronously or asynchronously when the configuration operates in Maximum Performance mode.

Answer: B,C,D
