

Analytics-Admn-201 Exam Pass4sure & Analytics-Admn-201 Torrent VCE: Salesforce Certified Tableau Server Administrator

DOWNLOAD the newest It-Tests Analytics-Admn-201 PDF dumps from Cloud Storage for free: https://drive.google.com/open?id=1YmpXsgR_5Kp6XaPlaKTDy68D1bSySHs

With the rapid development of information the global information has already entered into the age of which that computer network is the core. Analytics-Admn-201 certification test answers help people who are interested in computer network get a stepping stone to a good job. Many workers know obtaining a Salesforce certification means a good job with high salary, good benefit and better life. Analytics-Admn-201 Certification Test Answers will be of important for you.

Salesforce Analytics-Admn-201 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none"> Migration & Upgrade: This section of the exam measures the skills of System Engineers and covers the process of upgrading and migrating Tableau Server environments. Candidates should understand how to carry out clean reinstalls, migrate servers to new hardware, and maintain backward compatibility during the process.
Topic 2	<ul style="list-style-type: none"> Administration: This section of the exam measures the skills of Tableau Administrators and covers the day-to-day tasks of maintaining Tableau Server. Candidates should understand how to create and manage schedules, subscriptions, backups, and restores, as well as how to use tools such as TSM, Tabcmd, and REST API. It emphasizes monitoring, server analysis, log file usage, and embedding practices. It also includes managing projects, sites, and nested structures, while contrasting end-user and administrator abilities. Knowledge of publishing, web authoring, sharing views, caching, and data source certification is also tested.
Topic 3	<ul style="list-style-type: none"> Connecting to and Preparing Data: This section of the exam measures the skills of Tableau Administrators and covers the basic understanding of Tableau Server’s interface, navigation, and overall topology. Candidates are expected to recognize both client and server components, understand how these interact, and know where to find information about versions, releases, and updates. It also focuses on system requirements, including hardware, operating systems, browsers, email configurations, cloud considerations, and licensing models. Additionally, it examines knowledge of server processes, data source types, network infrastructure, and ports needed for a stable deployment.

Topic 4	<ul style="list-style-type: none"> • Installation and Configuration: This section of the exam measures the skills of Server Engineers and covers the process of installing Tableau Server, understanding installation paths, identity store options, SSO integrations, SSL setup, and silent installs. Candidates also need to demonstrate the ability to configure Tableau Server by setting cache, distributing processes, customizing sites, and configuring user quotas. It further includes adding users, managing their roles and permissions, and applying Tableau's security model at different levels from sites to workbooks.
Topic 5	<ul style="list-style-type: none"> • Troubleshooting: This section of the exam measures the skills of Support Specialists and covers resolving common Tableau Server issues. Candidates must know how to reset accounts, package logs, validate site resources, rebuild search indexes, and use analysis reports. It also includes understanding the role of browser cookies and creating support requests when needed.

Pass Guaranteed Quiz 2026 Analytics-Admn-201: Salesforce Certified Tableau Server Administrator Latest Exam Simulator Online

Wondering where you can find the perfect materials for the exam? Don't leave your fate depending on thick books about the exam. Our authoritative Salesforce Certified Tableau Server Administrator practice materials are licensed products. Whether newbie or experienced exam candidates you will be eager to have them. And they all made huge advancement after using them. So prepare to be amazed by our Analytics-Admn-201 practice materials. We can absolutely guarantee that even if the first time to take the exam, candidates can pass smoothly.

Salesforce Certified Tableau Server Administrator Sample Questions (Q26-Q31):

NEW QUESTION # 26

You have an installation of Tableau Server and a site that are configured to use default settings. What should you do to ensure that the users on the site can set up data-driven alerts?

- A. Run the tsm configuration set -k dataAlerts.checkIntervalInMinutes -v 60 command
- B. No action is necessary: the default settings enable data-driven alerts for the site
- C. Enable data-driven alerts on the Tableau Services Manager Configuration page
- **D. Change the data-driven alerts setting on the new site's Settings page**

Answer: D

Explanation:

Data-driven alerts in Tableau Server allow users to receive notifications when data in a view meets certain conditions (e.g., a sales metric exceeds a threshold). By default, this feature is disabled for a site unless explicitly enabled by an administrator.

Option C (Change the data-driven alerts setting on the new site's Settings page): This is the correct answer. In the Tableau Server web interface, a site administrator can navigate to the site's Settings > General page and enable the option "Let users create data-driven alerts." This must be done manually because the default setting for a new site is disabled. Once enabled, users with appropriate permissions (e.g., Viewer, Explorer, or Creator roles) can create alerts on views they have access to.

Option A (Enable data-driven alerts on the TSM Configuration page): This is incorrect because the TSM Configuration page (accessed via the TSM web UI or CLI) manages server-wide settings like ports, authentication, and processes, not site-specific features like data-driven alerts.

Option B (Run the tsm configuration set -k dataAlerts.checkIntervalInMinutes -v 60 command): This is incorrect. The dataAlerts.checkIntervalInMinutes key controls how frequently Tableau Server checks alert conditions (default is 60 minutes), but it does not enable the feature itself. The feature must first be turned on at the site level.

Option D (No action is necessary): This is incorrect because the default setting for data-driven alerts is off for new sites, requiring explicit action to enable it.

Reference: Tableau Server Documentation - "Configure Data-Driven Alerts" (https://help.tableau.com/current/server/en-us/data_alerts.htm).

NEW QUESTION # 27

What are two features of the Tableau Server user-based license? (Choose two.)

- A. Enables distinct user roles
- B. A perpetual license
- C. A subscription license
- D. Restricts the number of machine cores you can deploy

Answer: A,C

Explanation:

Tableau Server's user-based licensing model assigns licenses to individual users (Creator, Explorer, Viewer) rather than machines or cores. Key features include:

* Subscription license: Licenses are typically subscription-based, renewed annually or monthly, aligning with Tableau's pricing model.
* Distinct user roles: It supports three roles (Creator, Explorer, Viewer), each with specific capabilities, enabling granular access control.

* Option A (A subscription license): Correct. User-based licenses are subscription-based by default.

* Option B (Enables distinct user roles): Correct. The model defines Creator, Explorer, and Viewer roles.

* Option C (Restricts the number of machine cores): Incorrect. This applies to core-based licensing, not user-based.

* Option D (A perpetual license): Incorrect. Perpetual licenses were phased out; user-based licenses are subscription-based as of recent models.

Reference: Tableau Server Documentation - "Licensing Overview" (https://help.tableau.com/current/server/en-us/license_usage.htm).

NEW QUESTION # 28

Your deployment of Tableau Server uses Active Directory authentication. What statement correctly describes the process of importing a group from Active Directory?

- A. If an imported group contains any users that have Tableau Server accounts, their site role will be changed to match the site role specified during the import
- B. You can change the name of a group during import, although this will not change the group's name in Active Directory
- C. Importing a group from Active Directory requires a .csv file that lists user IDs
- D. New users created as a result of importing a group are assigned the site role specified during the import

Answer: D

Explanation:

Importing an AD group into Tableau Server syncs user management-let's analyze the process and options:

* AD Group Import Process:

* How: In the UI (Users > Groups > Add Group > Active Directory), enter the AD group name, set a site role, and sync.

* Behavior:

* Existing Users: If a user is already in Tableau Server, their site role remains unchanged unless manually adjusted-sync applies the minimum role only if it upgrades access.

* New Users: Added to Tableau with the site role specified during import.

* Config: Requires AD authentication enabled in TSM.

* Option D (New users created are assigned the site role specified during import): Correct.

* Details: When importing (e.g., "SalesTeam" group, site role: Explorer):

* New users get Explorer.

* Existing users keep their role unless it's below Explorer (e.g., Unlicensed # Explorer).

* Why: Ensures consistent onboarding-new users align with the group's intended access.

* Option A (Existing users' roles change to match import): Incorrect.

* Why: Existing roles persist unless lower than the minimum-e.g., Viewer stays Viewer if import sets Explorer, but Unlicensed upgrades. Not a full overwrite.

* Option B (Requires a .csv file): Incorrect.

* Why: AD import uses live sync via LDAP-no .csv needed (that's for local auth imports).

* Option C (Change group name during import): Incorrect.

* Why: The AD group name is fixed-you can't rename it in Tableau during sync (it mirrors AD).

Post-import renaming is possible but not part of the process.

Why This Matters: Accurate AD sync ensures seamless user management-missteps can disrupt access or licensing.

Reference: Tableau Server Documentation - "Synchronize Active Directory Groups" (<https://help.tableau.com>)

/current/server/en-us/groups_sync.htm).

NEW QUESTION # 29

What is the minimum hardware recommendation for a single-node production installation of Tableau Server?

- A. 4-Core CPU (2.0 GHz or higher), 64 GB RAM, 50 GB free disk space
- B. 2-Core CPU (1.8 GHz or higher), 8 GB RAM, 15 GB free disk space
- C. 4-Core CPU (2.0 GHz or higher), 16 GB RAM, 50 GB free disk space
- **D. 8-Core CPU (2.0 GHz or higher), 32 GB RAM, 50 GB free disk space**

Answer: D

Explanation:

Tableau Server's minimum hardware recommendations for a production single-node deployment ensure reliable performance for small to medium workloads. As of the latest documentation:

- * CPU: 8 cores (2.0 GHz or higher) to handle concurrent users, rendering, and background tasks.
- * RAM: 32 GB to support in-memory processing (e.g., VizQL, Data Engine) and caching.
- * Disk Space: 50 GB free for installation, logs, extracts, and temporary files.

Let's break it down:

- * Option C (8-Core CPU, 32 GB RAM, 50 GB free disk space): Correct. This matches Tableau's official minimum for production:
- * 8 cores ensure sufficient parallelism for processes like Backgrounder and VizQL.
- * 32 GB RAM supports multiple users and extract refreshes.
- * 50 GB disk space accommodates growth (initial install is ~1-2 GB, but logs and extracts expand).
- * Option A (4-Core, 16 GB RAM, 50 GB): Incorrect. Too low for production-4 cores and 16 GB RAM are below the threshold for reliable performance under load.
- * Option B (2-Core, 8 GB RAM, 15 GB): Incorrect. This is for non-production (e.g., trial) setups, insufficient for production stability.
- * Option D (4-Core, 64 GB RAM, 50 GB): Incorrect. 4 cores are inadequate, though 64 GB RAM exceeds the minimum (32 GB).

Why This Matters: Under-spec hardware can lead to slow performance, failed refreshes, or crashes in production-adhering to the minimum ensures stability.

Reference: Tableau Server Documentation - "Minimum Hardware Recommendations" (<https://help.tableau.com/current/server/en-us/requirements.htm>).

NEW QUESTION # 30

Which three types of data should you backup to ensure that you can restore a Tableau Server? (Choose three.)

- **A. Server secrets and Repository passwords**
- **B. Configuration data**
- **C. Repository data**
- D. Topology data

Answer: A,B,C

Explanation:

Backing up Tableau Server ensures recovery from failures or migrations. A full backup includes multiple data types-let's dissect this comprehensively:

* Backup Components:

- * Repository Data: PostgreSQL database with metadata (users, permissions, workbooks). Backed up via `tsm maintenance backup -f<filename>.tsbak`.
- * Configuration Data: Server settings (e.g., ports, authentication) also in the .tsbak file.
- * Server Secrets: Encryption keys, internal tokens, Repository passwords-critical for restoring functionality.
- * Extracts: .hyper files in File Store (optional, separate backup).
- * Option A (Server secrets and Repository passwords): Correct.
- * Details: Includes encryption keys (for extracts), internal tokens (process communication), and Repository credentials. Backed up separately or stored securely (e.g., tsm security export-keys).
- * Why Critical: Without these, restored data may be inaccessible or services may fail.
- * Option C (Configuration data): Correct.
- * Details: Ports, authentication settings, process topology-part of the .tsbak file.
- * Why Critical: Restores server behavior and connectivity post-recovery.

* Option D (Repository data): Correct.

* Details: Core metadata database-also in .tsbak.

* Why Critical: Without it, all content and user data is lost.

* Option B (Topology data): Incorrect.

* Details: Topology (process distribution) is part of configuration data in the .tsbak, not a separate entity. It's not distinctly backed up as "topology data." Why This Matters: A complete backup (secrets, config, repository) ensures full restoration-missing any piece risks an unusable server.

Reference: Tableau Server Documentation - "Back Up Tableau Server Data" (https://help.tableau.com/current/server/en-us/backup_restore.htm).

NEW QUESTION # 31

.....

We learned that a majority of the candidates for the exam are office workers or students who are occupied with a lot of things, and do not have plenty of time to prepare for the Analytics-Admn-201 exam. So we have tried to improve the quality of our training materials for all our worth. Now, I am proud to tell you that our training materials are definitely the best choice for those who have been yearning for success but without enough time to put into it. There are only key points in our Analytics-Admn-201 Training Materials. That is to say, you can pass the Analytics-Admn-201 exam as well as getting the related certification only with the minimum of time and efforts under the guidance of our training materials.
