Google Professional-Cloud-Architect Actual Questions: Google Certified Professional - Cloud Architect (GCP) - ExamsLabs Best Provider

Our Professional-Cloud-Architect exam questions have been expanded capabilities through partnership with a network of reliable local companies in distribution, software and product referencing for a better development. That helping you pass the Professional-Cloud-Architect exam with our Professional-Cloud-Architect latest question successfully has been given priority to our agenda. The Professional-Cloud-Architect Test Guide offer a variety of learning modes for users to choose from PDF version, Soft version and APP version. We believe that our Professional-Cloud-Architect exam questions can be excellent beyond your expectation.

The GCP certification exam is targeted at architects, developers, and IT professionals who have experience with cloud computing and want to take their skills to the next level. Professional-Cloud-Architect Exam covers a broad range of topics, including cloud architecture, networking, security, data storage, and machine learning. It tests candidates on their ability to design and implement GCP solutions that meet specific business requirements and performance objectives.

Google Certified Professional - Cloud Architect (GCP) Sample Questions (Q142-Q147):

NEW QUESTION # 142

Your customer is receiving reports that their recently updated Google App Engine application is taking approximately 30 seconds to load for some of their users. This behavior was not reported before the update. What strategy should you take?

- A. Open a support ticket to ask for network capture and flow data to diagnose the problem, then roll back your application.
- B. Roll back to an earlier known good release initially, then use Stackdriver Trace and logging to diagnose the problem in a development/test/staging environment.
- C. Roll back to an earlier known good release, then push the release again at a quieter period to investigate. Then use

Stackdriver Trace and logging to diagnose the problem.

- D. Work with your ISP to diagnose the problem.

Answer: B

Explanation:

Stackdriver Logging allows you to store, search, analyze, monitor, and alert on log data and events from Google Cloud Platform and Amazon Web Services (AWS). Our API also allows ingestion of any custom log data from any source. Stackdriver Logging is a fully managed service that performs at scale and can ingest application and system log data from thousands of VMs.

Even better, you can analyze all that log data in real time.

NEW QUESTION # 143

An application development team believes their current logging tool will not meet their needs for their new cloud-based product.

They want a better tool to capture errors and help them analyze their historical log data.

You want to help them find a solution that meets their needs.

What should you do?

- A. Send them a list of online resources about logging best practices
- B. Help them define their requirements and assess viable logging tools
- **C. Direct them to download and install the Google StackDriver logging agent**
- D. Help them upgrade their current tool to take advantage of any new features

Answer: C

Explanation:

The Stackdriver Logging agent streams logs from your VM instances and from selected third party software packages to Stackdriver Logging. Using the agent is optional but we recommend it. The agent runs under both Linux and Microsoft Windows.

Note: Stackdriver Logging allows you to store, search, analyze, monitor, and alert on log data and events from Google Cloud Platform and Amazon Web Services (AWS). Our API also allows ingestion of any custom log data from any source. Stackdriver Logging is a fully managed service that performs at scale and can ingest application and system log data from thousands of VMs.

Even better, you can analyze all that log data in real time.

NEW QUESTION # 144

Your marketing department wants to send out a promotional email campaign. The development team wants to minimize direct operation management. They project a wide range of possible customer responses, from 100 to 500,000 click-throughs per day. The link leads to a simple website that explains the promotion and collects user information and preferences. Which infrastructure should you recommend? (CHOOSE TWO)

- **A. Use a managed instance group to serve the website and Google Cloud Bigtable to store user data.**
- **B. Use Google App Engine to serve the website and Google Cloud Datastore to store user data.**
- C. Use a Google Container Engine cluster to serve the website and store data to persistent disk.
- D. Use a single compute Engine virtual machine (VM) to host a web server, backed by Google Cloud SQL.

Answer: A,B

NEW QUESTION # 145

For this question, refer to the Mountkirk Games case study. Mountkirk Games wants to design their solution for the future in order to take advantage of cloud and technology improvements as they become available. Which two steps should they take? (Choose two.)

- A. Begin packaging their game backend artifacts in container images and running them on Kubernetes Engine to improve the availability to scale up or down based on game activity.

- B. Store as much analytics and game activity data as financially feasible today so it can be used to train machine learning models to predict user behavior in the future.
- C. Set up a CI/CD pipeline using Jenkins and Spinnaker to automate canary deployments and improve development velocity.
- D. Implement a weekly rolling maintenance process for the Linux virtual machines so they can apply critical kernel patches and package updates and reduce the risk of 0-day vulnerabilities.
- E. Adopt a schema versioning tool to reduce downtime when adding new game features that require storing additional player data in the database.

Answer: C,D

NEW QUESTION # 146

Your agricultural division is experimenting with fully autonomous vehicles. You want your architecture to promote strong security during vehicle operation.

Which two architectures should you consider? (Choose two.)

- A. Require IPv6 for connectivity to ensure a secure address space.
- B. Use multiple connectivity subsystems for redundancy.
- C. Use a trusted platform module (TPM) and verify firmware and binaries on boot.
- D. Use a functional programming language to isolate code execution cycles.
- E. Treat every micro service call between modules on the vehicle as untrusted.
- F. Enclose the vehicle's drive electronics in a Faraday cage to isolate chips.

Answer: C,F
