

Microsoft's Exam Questions for DP-600 Help You Achieve Success in Your First Attempt

Domain Covered in [DP-600] Exam

TOPICS	Weightage of Question
<ul style="list-style-type: none"> • Maintain a data analytics solution • Prepare data • Implement and manage semantic models 	<p>(25-30%)</p> <p>(45-50%)</p> <p>(25-30%)</p>

P.S. Free 2026 Microsoft DP-600 dumps are available on Google Drive shared by Lead2PassExam: <https://drive.google.com/open?id=1bORQgcumqkOnaYj6ixIvcbKsjAtET7xy>

Therefore, make the most of this opportunity of getting these superb exam questions for the Microsoft DP-600 certification exam. We guarantee you that our top-rated Implementing Analytics Solutions Using Microsoft Fabric practice exam (PDF, desktop practice test software, and web-based practice exam) will enable you to pass the Microsoft DP-600 Certification Exam on the very first go.

We are not satisfied with that we have helped more candidates pass DP-600 exam, because we know that the IT industry competition is intense, we must constantly improve our dumps so that we cannot be eliminated. So our technical teams continue to renew the DP-600 Study Materials in time, in order to let the examinee using our products to keep up with the DP-600 exam reform tightly.

DP-600 Customizable Exam Mode | Online DP-600 Bootcamps

Do you want your IT capability to be most authoritatively recognized? One of the best method is to pass the DP-600 certification exam. The DP-600 exam software designed by our Lead2PassExam will help you master DP-600 Exam skills. Besides, abundant materials, user-friendly design and one-year free update after payment are the best favor for you to pass DP-600 exam.

Microsoft DP-600 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none"> • Prepare data: This section of the exam measures the skills of engineers and covers essential data preparation tasks. It includes establishing data connections and discovering sources through tools like the OneLake data hub and the real-time hub. Candidates must demonstrate knowledge of selecting the appropriate storage type—lakehouse, warehouse, or eventhouse—depending on the use case. It also includes implementing OneLake integrations with Eventhouse and semantic models. The transformation part involves creating views, stored procedures, and functions, as well as enriching, merging, denormalizing, and aggregating data. Engineers are also expected to handle data quality issues like duplicates, missing values, and nulls, along with converting data types and filtering. Furthermore, querying and analyzing data using tools like SQL, KQL, and the Visual Query Editor is tested in this domain.

Topic 2	<ul style="list-style-type: none"> • Implement and manage semantic models: This section of the exam measures the skills of architects and focuses on designing and optimizing semantic models to support enterprise-scale analytics. It evaluates understanding of storage modes and implementing star schemas and complex relationships, such as bridge tables and many-to-many joins. Architects must write DAX-based calculations using variables, iterators, and filtering techniques. The use of calculation groups, dynamic format strings, and field parameters is included. The section also includes configuring large semantic models and designing composite models. For optimization, candidates are expected to improve report visual and DAX performance, configure Direct Lake behaviors, and implement incremental refresh strategies effectively.
Topic 3	<ul style="list-style-type: none"> • Maintain a data analytics solution: This section of the exam measures the skills of administrators and covers tasks related to enforcing security and managing the Power BI environment. It involves setting up access controls at both workspace and item levels, ensuring appropriate permissions for users and groups. Row-level, column-level, object-level, and file-level access controls are also included, alongside the application of sensitivity labels to classify data securely. This section also tests the ability to endorse Power BI items for organizational use and oversee the complete development lifecycle of analytics assets by configuring version control, managing Power BI Desktop projects, setting up deployment pipelines, assessing downstream impacts from various data assets, and handling semantic model deployments using XMLA endpoint. Reusable asset management is also a part of this domain.

Microsoft Implementing Analytics Solutions Using Microsoft Fabric Sample Questions (Q157-Q162):

NEW QUESTION # 157

You have a Fabric tenant that contains a semantic model. The model contains data about retail stores.

You need to write a DAX query that will be executed by using the XMLA endpoint. The query must return the total amount of sales from the same period last year.

How should you complete the DAX expression? To answer, select the appropriate options in the answer area. NOTE: Each correct selection is worth one point.

Answer:

Explanation:

NEW QUESTION # 158

You have a Fabric tenant that contains a workspace named Workspace1.

You plan to deploy a semantic model named Model1 by using the XMLA endpoint.

You need to optimize the deployment of Model1. The solution must minimize how long it takes to deploy Model1.

What should you do in Workspace1?

- A. Select Large semantic model storage format.
- B. Select Users can edit data models in the Power BI service.
- **C. Select Small semantic model storage format.**
- D. Set Enable Cache for Shortcuts to On.

Answer: C

Explanation:

When using XMLA endpoint for deployment or processing, the semantic model storage format impacts deployment times. Small storage format allows faster metadata operations and shorter deployment times.

Large semantic model storage format is only needed for extremely large models (> 10 GB dataset limit), and it increases deployment overhead.

The other options (B: service editing, C: cache for shortcuts) are unrelated to XMLA endpoint deployment performance.

Reference:

Power BI semantic model storage format

answer: A. Select Small semantic model storage format.

NEW QUESTION # 159

You have a Fabric workspace named Workspacel that contains a lakehouse named Lakehouse1. Lakehouse1 contains a table named Table1. Table 1 contains the following data.

You need to perform the following actions:

- * Load the data from Table1 into a star schema.
- * Create a product dimension table named DimProduct and a fact table named FactSales.

Which three columns should you include in DimProduct?

- A. Date, ProductID, and TransactionID.
- B. ProductID, ProductName, and SalesAmount
- C. ProductName, SalesAmount, and TransactionID
- **D. ProductColor, ProductID, and ProductName.**

Answer: D

NEW QUESTION # 160

You have a Fabric tenant.

You plan to create a Fabric notebook that will use Spark DataFrames to generate Microsoft Power BI visuals.

You run the following code.

For each of the following statements, select Yes if the statement is true. Otherwise, select No. NOTE: Each correct selection is worth one point.

Answer:

Explanation:

Explanation:

- * The code embeds an existing Power BI report. - No
- * The code creates a Power BI report. - No
- * The code displays a summary of the DataFrame. - Yes

The code provided seems to be a snippet from a SQL query or script which is neither creating nor embedding a Power BI report directly. It appears to be setting up a DataFrame for use within a larger context, potentially for visualization in Power BI, but the code itself does not perform the creation or embedding of a report. Instead, it's likely part of a data processing step that summarizes data.

References =

- * Introduction to DataFrames - Spark SQL
- * Power BI and Azure Databricks

NEW QUESTION # 161

You have a Fabric workspace that uses the default Spark starter pool and runtime version 1,2.

You plan to read a CSV file named Sales.raw.csv in a lakehouse, select columns, and save the data as a Delta table to the managed area of the lakehouse. Sales_raw.csv contains 12 columns.

You have the following code.

For each of the following statements, select Yes if the statement is true. Otherwise, select No. NOTE: Each correct selection is worth one point.

Answer:

Explanation:

Explanation:

The Spark engine will read only the 'SalesOrderNumber', 'OrderDate', 'CustomerName', 'UnitPrice' columns from Sales_raw.csv. - Yes Removing the partition will reduce the execution time of the query. - No Adding inferSchema=true to the options will increase the execution time of the query. - Yes The code specifies the selection of certain columns, which means only those columns will be read into the DataFrame. Partitions in Spark are a way to optimize the execution of queries by organizing the data into parts that can be processed in parallel. Removing the partition could potentially increase the execution time because Spark would no longer be able to process the data in parallel efficiently. The inferSchema option allows Spark to automatically detect the column data types, which can increase the execution time of the initial read operation because it requires Spark to read through the data to infer the schema.

NEW QUESTION # 162

.....

The Lead2PassExam is committed to making the Microsoft DP-600 certification exam preparation simple, smart, and successful. To achieve this objective Lead2PassExam is offering top-notch and real DP-600 exam questions in three different formats. The names of these Implementing Analytics Solutions Using Microsoft Fabric (DP-600) exam questions formats are PDF files, desktop practice test software, and web-based DP-600 practice test software.
