Latest AIGP Exam Questions - AIGP Certification Exam
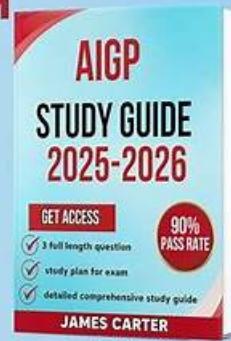

AIGP exam practice is well known for its quality service! Our users are all over the world, and we use uniform service standards everywhere. Our after-sales service staff will be on-line service 24 hours a day, 7 days a week. So, whether you are purchasing AIGP Training Materials, or during the study period, no matter what kind of problems you encounter on the AIGP study guide, you can always contact online customer service to get the timely help.

IAPP AIGP Exam Syllabus Topics:

Topic	Details
Topic 1	• Understanding the Foundations of AI Governance: This section of the exam measures skills of AI governance professionals and covers the core concepts of AI governance, including what AI is, why governance is needed, and the risks and unique characteristics associated with AI. It also addresses the establishment and communication of organizational expectations for AI governance, such as defining roles, fostering cross-functional collaboration, and delivering training on AI strategies. Additionally, it focuses on developing policies and procedures that ensure oversight and accountability throughout the AI lifecycle, including managing third-party risks and updating privacy and security practices.
Topic 2	• Understanding How to Govern AI Development: This section of the exam measures the skills of AI project managers and covers the governance responsibilities involved in designing, building, training, testing, and maintaining AI models. It emphasizes defining the business context, performing impact assessments, applying relevant laws and best practices, and managing risks during model development. The domain also includes establishing data governance for training and testing, ensuring data quality and provenance, and documenting processes for compliance. Additionally, it focuses on preparing models for release, continuous monitoring, maintenance, incident management, and transparent disclosures to stakeholders.
Topic 3	• Understanding How to Govern AI Deployment and Use: This section of the exam measures skills of technology deployment leads and covers the responsibilities associated with selecting, deploying, and using AI models in a responsible manner. It includes evaluating key factors and risks before deployment, understanding different model types and deployment options, and ensuring ongoing monitoring and maintenance. The domain applies to both proprietary and third-party AI models, emphasizing the importance of transparency, ethical considerations, and continuous oversight throughout the model's operational life.

Topic 4	• Understanding How Laws, Standards, and Frameworks Apply to AI: This section of the exam measures skills of compliance officers and covers the application of existing and emerging legal requirements to AI systems. It explores how data privacy laws, intellectual property, non-discrimination, consumer protection, and product liability laws impact AI. The domain also examines the main elements of the EU AI Act, such as risk classification and requirements for different AI risk levels, as well as enforcement mechanisms. Furthermore, it addresses the key industry standards and frameworks, including OECD principles, NIST AI Risk Management Framework, and ISO AI standards, guiding organizations in trustworthy and compliant AI implementation.

Quiz 2026 Latest AIGP: Latest IAPP Certified Artificial Intelligence Governance Professional Exam Questions

Each format has a pool of IAPP Certified Artificial Intelligence Governance Professional (AIGP) actual questions which have been compiled under the guidance of thousands of professionals worldwide. Questions in this product will appear in the IAPP AIGP final test. Hence, memorizing them will help you get prepared for the AIGP examination in a short time. The product of TrainingDump comes in PDF, desktop practice exam software, and AIGP web-based practice test. To give you a complete understanding of these formats, we have discussed their features below.

IAPP Certified Artificial Intelligence Governance Professional Sample Questions (Q143-Q148):

NEW QUESTION # 143
Each of the following actors are typically engaged in the Al development life cycle EXCEPT?

- **A. Government regulators.**
- B. Data architects.
- C. Socio-cultural and technical experts.
- D. Legal and privacy governance experts.

Answer: A

Explanation:
Typically, actors involved in the AI development life cycle include data architects (who design the data frameworks), socio-cultural and technical experts (who ensure the AI system is socio-culturally aware and technically sound), and legal and privacy governance experts (who handle the legal and privacy aspects).
Government regulators, while important, are not directly engaged in the development process but rather oversee and regulate the industry. Reference: AIGP BODY OF KNOWLEDGE and AI development frameworks.

NEW QUESTION # 144
CASE STUDY
Please use the following answer the next question:
XYZ Corp., a premier payroll services company that employs thousands of people globally, is embarking on a new hiring campaign and wants to implement policies and procedures to identify and retain the best talent.
The new talent will help the company's product team expand its payroll offerings to companies in the healthcare and transportation sectors, including in Asia.
It has become time consuming and expensive for HR to review all resumes, and they are concerned that human reviewers might be susceptible to bias.
Address these concerns, the company is considering using a third-party Al tool to screen resumes and assist with hiring. They have been talking to several vendors about possibly obtaining a third-party Al-enabled hiring solution, as long as it would achieve its goals and comply with all applicable laws.
The organization has a large procurement team that is responsible for the contracting of technology solutions.
One of the procurement team's goals is to reduce costs, and it often prefers lower-cost solutions. Others within the company are responsible for integrating and deploying technology solutions into the organization's operations in a responsible, cost-effective

manner.

The organization is aware of the risks presented by AI hiring tools and wants to mitigate them. It also questions how best to organize and train its existing personnel to use the AI hiring tool responsibly. Their concerns are heightened by the fact that relevant laws vary across jurisdictions and continue to change.

Which other stakeholder groups should be involved in the selection and implementation of the AI hiring tool?

- A. Finance and Legal.
- B. Supply Chain and Marketing.
- C. Litigation and Product Development.
- D. Marketing and Compliance.

Answer: A

Explanation:

In the selection and implementation of the AI hiring tool, involving Finance and Legal is crucial. The Finance team is essential for assessing cost implications, budget considerations, and financial risks. The Legal team is necessary to ensure compliance with applicable laws and regulations, including those related to data privacy, employment, and anti-discrimination. Involving these stakeholders ensures a comprehensive evaluation of both the financial viability and legal compliance of the AI tool, mitigating potential risks and aligning with organizational objectives and regulatory requirements.

NEW QUESTION # 145
A UK company has designed a facial recognition model to support border control.
The EU AI Act would apply to the model in all of the following situations EXCEPT if?

- A. The model was trained by an EU company.
- B. The model is deployed at UK border checkpoints.
- C. The model was released under an open source license.
- D. The model is deployed at an EU border checkpoint.

Answer: B

Explanation:

The EU AI Act applies extraterritorially, meaning it affects entities outside the EU when their AI systems impact individuals within the EU. However, it does not apply to systems that are developed, sold, or used entirely outside of the EU-such as in the UK, unless they affect the EU market or individuals.
From the AI Governance in Practice Report 2025:
"The act imposes regulatory obligations... depending on their capabilities, reach and computing power, certain GPAI systems are considered to present systemic risk and attract broadly similar obligations to those applicable to high-risk AI systems." (p. 7)
"The EU AI Act is the world's first comprehensive AI regulation... requirements apply to providers, deployers, importers, and distributors of AI systems when such systems are placed on the EU market." (p. 7-8) Thus:
* A. Open source release does not exclude applicability if deployed in the EU.
* B. Deployment at an EU border clearly invokes jurisdiction.
* D. Training by an EU company creates jurisdictional links.
* C. Deployment only at UK checkpoints, with no EU use or impact, is outside scope.

NEW QUESTION # 146
A company is working to develop a self-driving car that can independently decide the appropriate route to take the driver after the driver provides an address.
If they want to make this self-driving car "strong" AI, as opposed to "weak," the engineers would also need to ensure?

- A. That the AI has full human cognitive abilities that can independently decide where to take the driver.
- B. That the AI has strong cybersecurity to prevent malicious actors from taking control of the car.
- C. That they have obtained appropriate intellectual property (IP) licenses to use data for training the AI.
- D. That the AI can differentiate among ethnic backgrounds of pedestrians.

Answer: A

Explanation:

Strong AI, also known as artificial general intelligence (AGI), refers to AI that possesses the ability to understand, learn, and apply

intelligence across a broad range of tasks, similar to human cognitive abilities.

For the self-driving car to be classified as "strong" AI, it would need to possess full human cognitive abilities to make independent decisions beyond pre-programmed instructions. Reference: AIGP BODY OF KNOWLEDGE and AI classifications.

NEW QUESTION # 147

What is the best reason for a company adopt a policy that prohibits the use of generative AI?

- A. Avoid accidental disclosure to its confidential and proprietary information.
- B. Avoid needing to identify and hire qualified resources.
- C. Avoid using technology that cannot be monetized.
- D. Avoid the time necessary to train employees on acceptable use.

Answer: A

Explanation:
The primary concern for a company adopting a policy prohibiting the use of generative AI is the risk of accidental disclosure of confidential and proprietary information. Generative AI tools can inadvertently leak sensitive data during the creation process or through data sharing. This risk outweighs the other reasons listed, as protecting sensitive information is critical to maintaining the company's competitive edge and legal compliance. This rationale is discussed in the sections on risk management and data privacy in the IAPP AIGP Body of Knowledge.

NEW QUESTION # 148

......

If you want to pass the AIGP exam in the lest time with the lest efforts, then you only need to purchase our AIGP learning guide. You can own the most important three versioons of our AIGP practice materials if you buy the Value Pack! Also you can only choose the one you like best. As you know, the best for yourself is the best. Choosing the best product for you really saves a lot of time! AIGP Actual Exam look forward to be your best partner.
