

C-S43-2601 Valid Dumps, New C-S43-2601 Test Materials

C_S43_2022

**SAP Certified Application
Associate - SAP S/4HANA
Asset Management**

SAP Certified Implementation Consultant - SAP S/4HANA Cloud Private Edition, Asset Management (C_S43_2601) has introduced practice test (desktop and web-based) for the students so they can practice anytime in an easy way. The SAP Certified Implementation Consultant - SAP S/4HANA Cloud Private Edition, Asset Management (C_S43_2601) (C-S43-2601) practice tests are customizable which means the students can set the time and questions according to their needs. The C-S43-2601 Practice Tests have unlimited tries so that the users don't make extra mistakes when giving it the next time. Candidates can access the previously given tries from the history and avoid making mistakes in the final examination.

As far as our C-S43-2601 practice test is concerned, the PDF version brings you much convenience with regard to the following two aspects. On the one hand, the PDF version contains demo where a part of questions selected from the entire version of our C-S43-2601 Test Torrent is contained. On the other hand, our C-S43-2601 preparation materials can be printed so that you can study for the exams with papers and PDF version. With such benefits, why don't you have a try?

>> C-S43-2601 Valid Dumps <<

New SAP C-S43-2601 Test Materials - New C-S43-2601 Exam Answers

Use this C-S43-2601 practice material to ensure your exam preparation is successful. Mock exams at Braindumpsqa are available in C-S43-2601 desktop software and web-based format. Both SAP C-S43-2601 self-assessment exams have similar features. They create an SAP C-S43-2601 actual test-like scenario, point out your mistakes, and offer customizable sessions.

SAP Certified Implementation Consultant - SAP S/4HANA Cloud Private Edition, Asset Management (C_S43_2601) Sample Questions (Q10-Q15):

NEW QUESTION # 10

Check Inspection Lot and record Inspection Results

The project team evaluates during the implementation project the checking of Inspection Lots Checklist processing including result recording. The following features need to be checked:

- * Display the automatically created Inspection Lot
- * Record Inspection Results
- * Display the automatically created Inspection Lot for the previously created Maintenance Order including Checklist. The Inspection Lot comprises the following data:

Field	Value
Material	T-PM1100
Plant	1010
Inspection Lot Origin	89 Miscellaneous
Group	CL-DE-00
Group Counter	1

* Record Inspection Results for the previously created Inspection Lot so that the Usage Decision is automatically set to Can be used

Answer:

Explanation:

See the Explanation for complete Solution of this Task.

Explanation:

Task 13 Overview

This task focuses on the quality management (QM) integration with maintenance. You will verify the inspection lot that was automatically triggered by your maintenance order and then record the results to confirm the technical object is fit for use.

Step 1: Display the Automatically Created Inspection Lot

Before recording results, you must verify that the system generated the correct inspection lot for your maintenance order.

* Access the Transaction : Enter QA03 (Display Inspection Lot) in the command field and press Enter .

* Locate the Lot : Search for the inspection lot associated with the maintenance order you created in Task 12.

* Verify the Following Data :

* Material : T-PM1100

* Plant : 1010

* Inspection Lot Origin : 89 (Miscellaneous)

* Group : CL-DE-00

* Group Counter : 1

Explanation : The inspection lot is the central record for quality testing. Seeing these specific values (Group CL-DE-00) confirms that the classification you set up in Task 11 correctly triggered the intended inspection plan.

Step 2: Record Inspection Results

This is the process of entering the actual findings from the checklist inspection.

* Access the Transaction : You can navigate directly from the Inspection Lot in QA03 or use transaction QE51N (Results Recording Selection).

* Select the Lot : Enter your inspection lot number and click Execute .

* Record Results :

* Enter the inspection values for each characteristic listed in the checklist.

* Ensure the values you enter are within the "Acceptable" range or marked as "Pass".

* Automatic Usage Decision : Record the results such that the Usage Decision (UD) is automatically set to "Can be used" .

* Save : Click the Save (floppy disk) icon.

Explanation : By recording positive results, you satisfy the quality requirements for the maintenance task.

The automatic transition to "Can be used" status tells the system the pump has passed inspection and the maintenance order can proceed toward completion.

NEW QUESTION # 11

Create a Task List

The project team evaluates during the implementation project Task Lists in SAP S/4HANA Asset Management. The following features need to be checked:

* Create a Task List header

* Create Task List operations

* Create a Task List with 3 Task List operations. Maintenance Strategy Z## comprises Maintenance Packages with different hierarchy levels.

Use the following information at header level of the Task List:

Field	Value
Group	TL-##
Group Counter	1
Planning Plant	1010
Description	Regular Maintenance GR##
Work Center	MK-00
Work Center Plant	1010
Usage	4
Planner Group	P##
Maintenance Strategy	Z##

Use the following information for each Task List operation:

Field	Value
Work Ctr	MK-00
Plnt	1010
Control Key	PM01
Work	30
Unit	MIN

* Assign Maintenance Packages to the Task List Operations as follows:

- * Operation 10 is to be performed monthly.
- * Operation 20 is to be performed every 4 months.
- * Operation 30 is to be performed every 12 months.

Answer:

Explanation:

See the Explanation for complete Solution of this Task.

Explanation:

Since we encountered that error with the Z48 strategy , we must ensure that is fixed before we can finish the Task List. Here is the complete, verified, step-by-step process to finalize Task 7 , including the "hidden" pre- requisite.

Task 7: Create a General Task List

Objective : To create a standardized template of maintenance steps that can be automatically pulled into future work orders based on a schedule.

Step 1: The Pre-requisite (Fixing Strategy Z48)

If you haven't done this yet, SAP will not let you save the Task List.

- * Transaction : IP11 (Maintain Maintenance Strategies).
- * Action : Click New Entries .
- * Strategy : Z48
- * Description : Strategy for Group 48
- * Strategy Unit : MON (Months).
- * Packages : On the left, double-click Packages , then click New Entries :
- * Line 1 : Cycle 1 / Unit MON / Text Monthly
- * Line 2 : Cycle 4 / Unit MON / Text Every 4 Months
- * Line 3 : Cycle 12 / Unit MON / Text Yearly
- * Save (Floppy Disk icon).

Explanation : A strategy is the "calendar" that defines how often work happens. Without this, the system doesn't know what

"Monthly" or "Yearly" means.

Step 2: Create Task List Header

* Transaction : IA05 .

* Initial Screen : Group TL-48, Group Counter 1. Press Enter .

* Header Fields :

* Description : Regular Maintenance GR48

* Planning Plant : 1010

* Work Center : MK-00 / Plant : 1010

* Usage : 4 (Plant Maintenance)

* Status : 4 (Released)

* Planner Group : P48

* Maint. Strategy : Z48

Explanation : The header defines who is responsible for the work (Planner Group P48) and which scheduling rules (Strategy Z48) apply to the whole list.

Step 3: Create Operations

* Click the Operations button (F6) at the top.

* Enter three rows with this data:

* Op 10 : Work Center MK-00, Plant 1010, Control Key PM01, Work 30, Unit MIN.

* Op 20 : (Same as above).

* Op 30 : (Same as above).

Explanation : Operations are the actual steps the technician follows. Here, we are saying each step takes 30 minutes of mechanical labor.

Step 4: Assign Maintenance Packages (The "Frequencies")

This is the most important part of Task 7. We tell SAP which operation happens when.

* Select Row 10 (click the box at the far left of the row).

* Go to Menu: Goto > Maintenance Packages .

* Check the box for the 1 Month package. Click the Back (Green Arrow) icon.

* Select Row 20 .

* Go to Goto > Maintenance Packages and check the 4 Month package. Click Back .

* Select Row 30 .

* Go to Goto > Maintenance Packages and check the 12 Month package. Click Back .

Explanation : Now, SAP knows that Op 10 happens every month, but Op 30 only happens once a year.

Step 5: Save

* Click the Save icon.

* The message at the bottom should say: "Task list TL-48 saved with group counter 1" .

NEW QUESTION # 12

Create a Maintenance Order with Checklists

The project team evaluates during the implementation project Maintenance Orders with Checklists in SAP S/4HANA Asset Management. The following features need to be checked:

* Create a Maintenance Order with Checklist

* Display a Maintenance Order with automatically generated Object List and Checklist.

* Create a Maintenance Order using an Order Type which is already configured for the checklist process.

Use the following data:

Field	Value
Functional Location	##-01-PRD-01-03-HD
General Maintenance Task List	A / T-PMCLN / 1

* Display the previously created Maintenance Order with automatically generated Object List and Checklist.

Answer:

Explanation:

See the Explanation for complete Solution of this Task.

Explanation:

Task 12 Overview

In this task, you will create a maintenance order using a specific order type configured for the checklist process. The system will then

automatically generate an object list and a corresponding checklist based on the equipment and task list assigned.

Step 1: Create a Maintenance Order with Checklist

You need to create a new order using a functional location and a specific task list that triggers the checklist functionality.

* Access the Transaction : Use transaction code IW31 (Create Maintenance Order).

* Initial Screen :

* Order Type : Select an order type already configured for the checklist process (typically PM01 or a specific custom type designated for checklists in your training environment).

* Press Enter .

* Enter Header and Location Data :

* Functional Location : Enter 48-01-PRD-01-03-HD .

* Description : Enter a relevant description (e.g., Pump Checklist Maintenance GR48).

* Assign the Task List :

* Go to the Operations tab or find the task list assignment section.

* General Maintenance Task List : Enter A / T-PMCLEN / 1 .

* Press Enter to validate.

* Save : Click the Save (floppy disk) icon.

Explanation : By assigning this specific functional location and general task list, you are triggering the

"Checklist" integration. The system uses the classification data you set up in Task 11 to determine that a checklist (inspection lot) is required for this job.

Step 2: Display and Verify the Checklist

After saving, you must verify that the system correctly generated the technical components of the checklist.

* Display the Order : Use transaction code IW33 and enter the order number you just created.

* Verify the Object List :

* Navigate to the Object List tab.

* You should see the equipment or functional location listed here with a link to the checklist.

* Verify the Checklist :

* Look for a button or tab labeled Checklists or Inspection Lot within the order.

* The system should show that a checklist has been automatically generated for the repair operations.

Explanation : The goal of this step is to confirm that the "Object List" and "Checklist" were created automatically by the system. This proves the background configuration for QM (Quality Management) integration is working correctly with your maintenance order

NEW QUESTION # 13

Task 6: Configure Maintenance Order Types and work with Maintenance Orders The project team evaluates during the implementation project Maintenance Orders in SAP S/4HANA Asset Management. The following features need to be checked:

* Configure a Maintenance Order Type and create a Maintenance Order

* Create a Time Confirmation a Maintenance Order

* Prepare a Maintenance Order for Completion

* Create a Maintenance Order and save it.

Note:

Make sure that you have maintained all required customizing settings for the Maintenance Order Type.

Use the following information at header level:

Field	Value
Order Type	ZZ##
Description	Repair pump
Priority	Medium
Equipment	T-PA##
Planning Plant	1010
Maintenance activity type	003 Repair
Plnd Costing Va	ZZ01
Act. Costing Va	ZZ01
Priority Type	PM

Plan a Maintenance Order Operation and use the following information:

Field	Value
WkCtr	T-ME##
Plnt	1010
Ctrl key	PM01

Work durtn	2 HR
------------	------

* Create a Time Confirmation for the just created Maintenance Order. Use the following information:

Field	Value
Work Center	T-ME##
Work Center Plant	1010
Actual Work	2 HR
Activity Type	1410
Final Confirmtn	x (select indicator)

* Display the Actual Costs assigned to the just created Maintenance Order and set it to Technically Completed. Display the Settlement Rule.

Note:
The following information is displayed:

Field	Value
Actual Costs / Internal Labor	60,00 EUR
Sys.Status	TECO CNF JBF1 NMAT PRC SETC
Acct Assignment Cat. (via SAP GUI)	CTR
Settlement Category (via FLP)	Cost Center
Settlement Receiver	4110

Answer:

Explanation:

See the Explanation for complete Solution of this Task.

Explanation:

Task 6 Overview

The goal of this task is to process a repair from start to finish. You will convert the "leaking pump" notification into a work order, plan the labor, record the work performed, and technically close the file.

Step 1: Create the Maintenance Order from Notification

Instead of starting from scratch, we link the order to the notification you created in Task 5.

* Access the Transaction : Use transaction code IW31 .

* Initial Screen :

* Order Type : PM01.

* Notification : Enter your notification number (e.g., 10000147).

* Press Enter .

* Header Data :

* The description "Pump is leaking" should pull in automatically.

* Main Work Center : Ensure it is T-ME48.

Explanation : By entering the notification number, SAP automatically pulls in the equipment, functional location, and problem description, ensuring "data integrity" across the maintenance process.

Step 2: Plan the Operations (Labor)

You must tell the system how much effort the repair requires.

- * Go to the Operations Tab .
- * Enter Planning Data :
- * Work : 2.
- * Unit (Un) : H (Hours).
- * Number : 1 (One person).
- * Duration (Dur.) : 2 / Unit : H.
- * Add Enhancement Data :
- * Click the Additional Data tab - > Enhancement sub-tab.
- * In the Field Key box, use the search (F4) to select 0000001 (User-defined fields).
- * In the first text box (Text 1), type: Industrial Z48.

Explanation : Planning the work allows the system to calculate the estimated cost of the repair. The "Enhancement" data is used to store specific technical details (like the motor type) that aren't in the standard SAP fields.

Step 3: Release the Order

An order in "Created" (CRTD) status is just a plan. To start work, it must be "Released" (REL).

- * Release : Look at the top toolbar and click the Green Flag icon .
- * Verify Status : The "Sys.Status" field should now include REL.
- * Save : Click the Save (floppy disk) icon.

Explanation : Releasing the order is the "Green Light" for the shop floor. It allows technicians to charge time to the job and warehouse staff to issue parts.

Step 4: Time Confirmation (Recording the Work)

Now we record that the repair is physically finished.

- * Access the Transaction : Use transaction code IW41 .
- * Enter Data :
- * Order : Enter your order number (e.g., 4000395).
- * Actual Work : 2 H.
- * Check the boxes for Final Confirmation and No Remaining Work .
- * Confirmation Text : Pump repaired and tested.
- * Save : Click the Save icon.

Explanation : This step captures the "Actual Cost." SAP multiplies the 2 hours of labor by the hourly rate of work center T-ME48 to calculate exactly how much this repair cost the company.

Step 5: Technical Completion (TECO)

The final administrative step to close the repair file.

- * Access the Transaction : Use transaction code IW32 .
- * Complete Technically :
- * Go to menu: Order > Functions > Complete > Complete (technically) .
- * Click the Green Checkmark on the popup window.
- * Save : Click the Save icon.

Explanation : TECO (Technical Completion) locks the order. It tells the system the asset is back in service and prevents any further labor or parts from being charged to this specific job.

NEW QUESTION # 14

Create and use a Maintenance Work Center

The project team evaluates during the implementation project the organizational elements in SAP S/4HANA Asset Management.

The following features need to be checked:

- * Create a Maintenance Work Center
- * Create a capacity demand for a Maintenance Work Center
- * Create a new Maintenance Work Center master record ZZ-ME## for maintenance plant 1010 similar to maintenance work center T-ME00 and save it. Use the following information:

Field	Value
Plant	1010
Work Center	ZZ-ME##
Description	Mechanical Maintenance ##
No. Ind. Capacities	5
Capacity	24,00 H

* Create a capacity demand of 1 hour for the just created Maintenance Work Center ZZ-ME## by creating a new maintenance order of order type PM01 .

Answer:

Explanation:

See the Explanation for complete Solution of this Task.

Explanation:

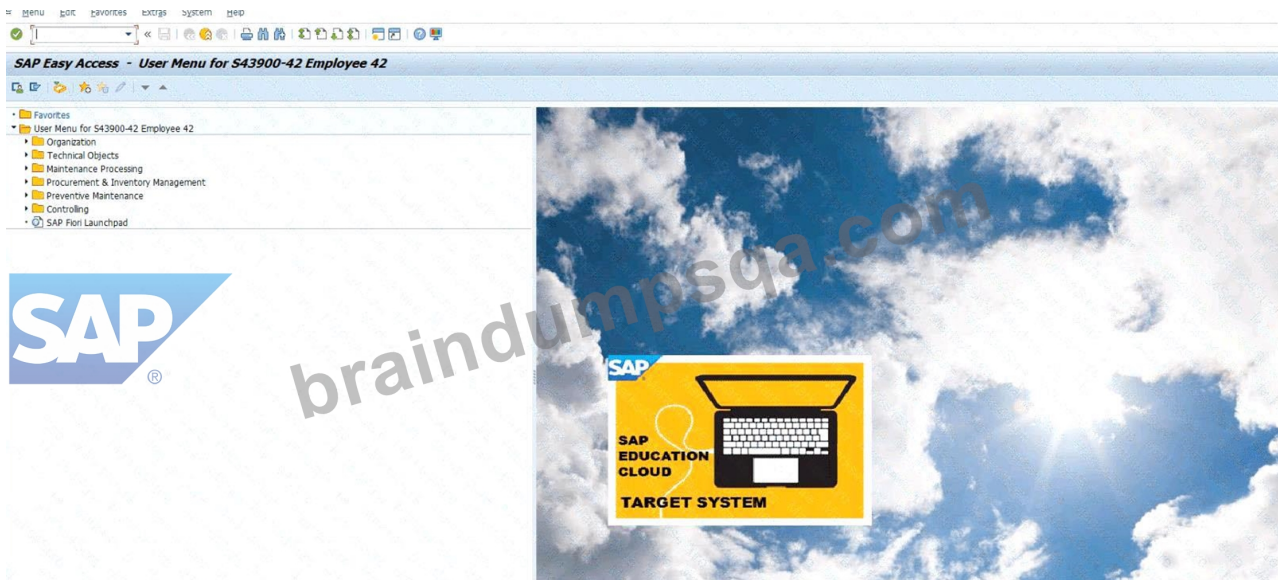

Task 3: Create and Use a Maintenance Work Center

Objective

In Task 3, the requirement was to:

- * create a new maintenance work center ZZ-ME42 for plant 1010 similar to T-ME00
- * maintain the required capacity values
- * create a 1-hour capacity demand for that work center by creating a maintenance order of type PM01

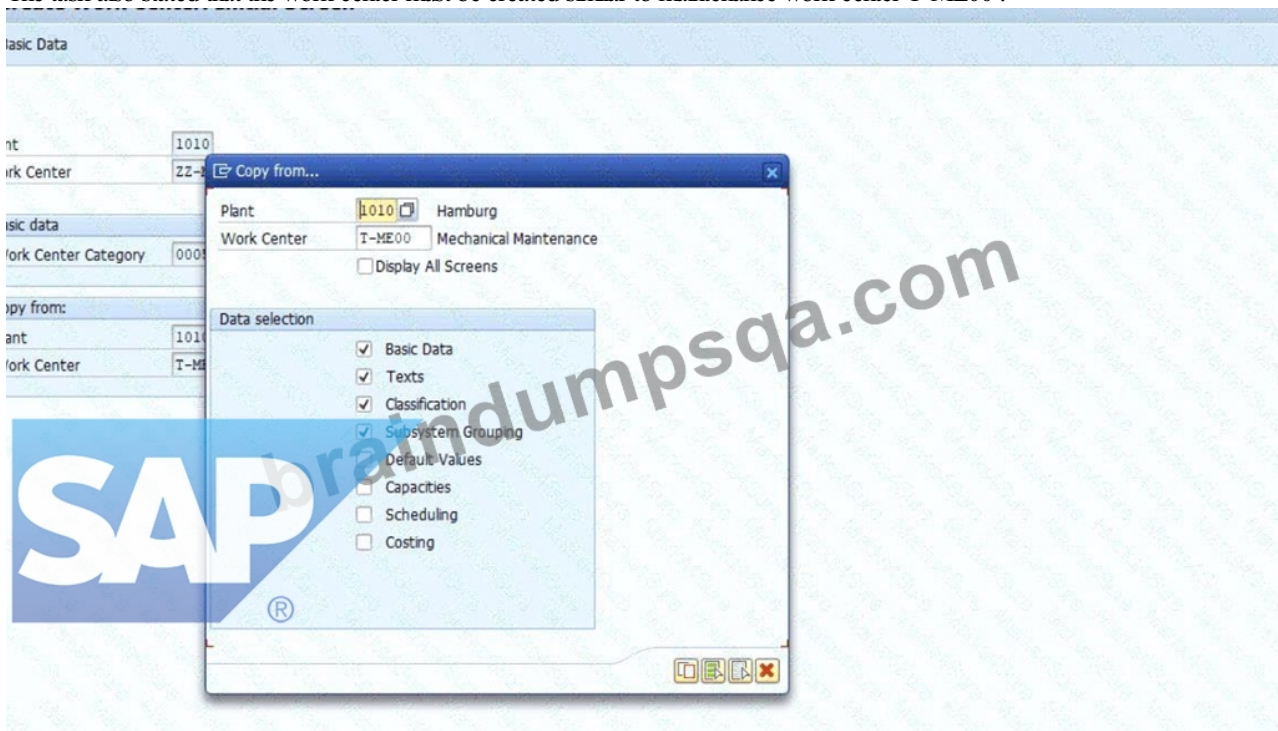

Part 1: Create the Maintenance Work Center Requirement from task file

The task required the following values for the work center:

- * Plant = 1010
- * Work Center = ZZ-ME42
- * Description = Mechanical Maintenance 42
- * No. Ind. Capacities = 5
- * Capacity = 24.00 H

The task also stated that the work center must be created similar to maintenance work center T-ME00 .

Step-by-step procedure

Step 1: Open work center creation

- * Go to SAP GUI command field
- * Enter transaction IR01
- * Press Enter

Transaction IR01 is used to create a new work center. This is the correct starting point for creating the maintenance work center required in Task 3.

Step 2: Enter initial work center data

On the Create Work Center: Initial Screen , enter:

- * Plant = 1010
- * Work Center = ZZ-ME42

- * Work Center Category = 0005
- * In Copy from :
- * Plant = 1010
- * Work Center = T-ME00

Then press Enter .

The task explicitly required the work center to be created for plant 1010 and to be created similar to T-ME00.

Work center category 0005 is the maintenance work center category, so this was the correct category to use for a maintenance work center.

Step 3: Include capacity data during copy

When the Copy from popup appeared:

- * select Capacities
- * continue with the green check

This was important because the task required changing capacity-related data:

- * No. Ind. Capacities = 5
- * Capacity = 24.00 H Copying the capacity data ensured the new work center inherited the capacity structure from T-ME00 and could then be adjusted correctly.

Create Work Center: Capacity Overview

Plant: 1010 Hamburg
 Work Center: ZZ-ME42 Mechanical Maintenance 42

Basic Data | Default Values | **Capacities** | Scheduling | Costing | Groups

Overview

Capacity category: 002 Labor
 Pooled capacity: Capacity Mechanical Control CapacityReduction
 Setup Formula: 0 Formula-Related
 Processing Formula: 0 Formula-Related
 Teardown Formula: 0 Formula-Related
 Other Formula: SAP008 Proj:RqmtsNetwkMai
 Distribution:
 Int. dist. key:

Capacity Form. Form... Formula constnts ActCapReqmnts

Step 4: Maintain basic data

On the work center master screen:

- * change the description to Mechanical Maintenance 42

This matches the exact description required by the task.

Step 5: Maintain capacity values

Go to the Capacities tab, then open the capacity detail screen.

Maintain or verify:

* No. Ind. Capacities = 5

* Capacity Base Unit = H

* Capacity recalculated to 24.00 H

In our system, the Capacity field was system-calculated and not directly editable.

The final valid values were achieved with:

* Start Time = 08:00:00

* End Time = 17:00:00

* Length of breaks = 01:00:00

* Capacity Utilization = 60

* No. Ind. Capacities = 5

This produced:

* Capacity = 24.00 H

The task required 24.00 H capacity, but SAP calculated it automatically based on operating time, utilization, and number of individual capacities.

The resulting calculation was correct and matched the task requirement exactly.

Step 6: Save the work center

* Click Save

Later, when trying to create the same work center again, SAP displayed the system message:

* "Work center ZZ-ME42 in plant 1010 already exists"

Explanation / Verification:

This system message confirmed that the work center had already been created successfully.

Therefore, the creation of ZZ-ME42 was verified as complete.

Part 2: Create a 1-Hour Capacity Demand

Requirement from task file

The task required:

* create a capacity demand of 1 hour

* for the newly created maintenance work center ZZ-ME42

* by creating a maintenance order of type PM01

Step-by-step procedure

Step 7: Open maintenance order creation

* In the command field, enter /nIW31

* Press Enter

Transaction IW31 is used to create a maintenance order.

The /n ensured SAP exited the previous transaction and opened the new one directly.

Step 8: Enter order header data

On the Create Maintenance Order: Initial Screen, enter:

* Order Type = PM01

* Planning Plant = 1010

Then press Enter.

The task explicitly required the capacity demand to be created by means of a maintenance order of type PM01.

Step 9: Enter order description

On the order header screen, enter a short text such as:

* Capacity demand ZZ-ME42

The task did not prescribe a specific short text, so a meaningful description was used for traceability.

Step 10: Create the first operation

In the first operation area / operations overview, maintain:

* Operation = 0010

* Work Center = ZZ-ME42

* Plant = 1010

* Control Key = PM01

* Work Duration / Work = 1

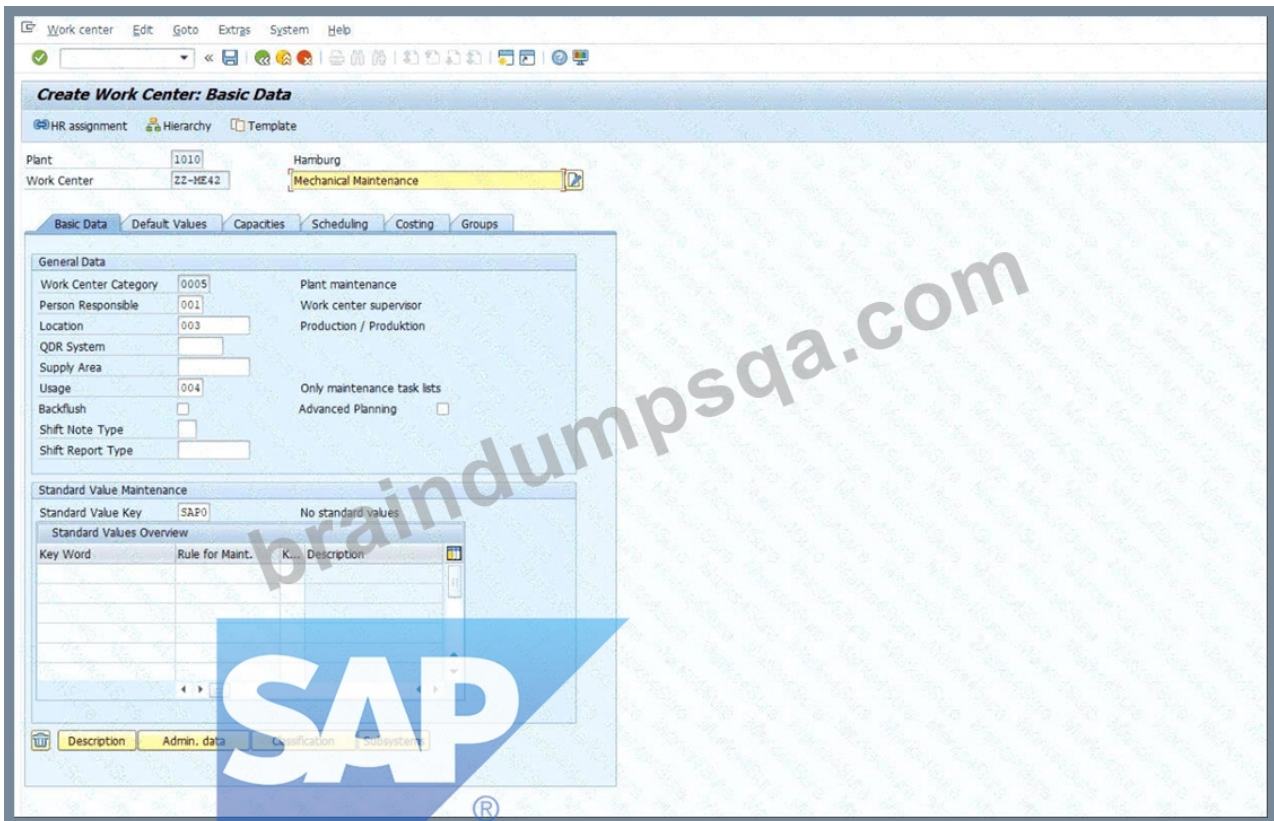

* Unit = H

Then press Enter.

This operation is the actual source of the capacity demand.

The capacity demand is not created merely by the order header; it is created by assigning the operation to the work center with a planned work value of 1 hour.

Therefore, these operation entries were the critical part of fulfilling Task 3.

Step 11: Save the maintenance order

* Click Save

SAP displayed the confirmation message:

* "Order saved with number 4000314"

Explanation / Verification:

This was the final confirmation that the maintenance order had been created successfully.

Because the operation was assigned to ZZ-ME42 with 1 H planned work, this verified that the required 1- hour capacity demand had been created for the work center.

Verified completed objects

The following results were verified during execution:

- * Maintenance Work Center created
- * Work Center = ZZ-ME42
- * Plant = 1010
- * confirmed by SAP message that the work center already existed when rechecked
- * Capacity maintained correctly
- * No. Ind. Capacities = 5
- * Capacity = 24.00 H
- * Capacity demand created
- * maintenance order type PM01
- * operation assigned to ZZ-ME42
- * planned work = 1 H
- * Order successfully saved
- * SAP confirmation: Order saved with number 4000314

NEW QUESTION # 15

.....

Our company employs a professional service team which traces and records the popular trend among the industry and the latest update of the knowledge about the C-S43-2601 exam reference. We give priority to keeping pace with the times and providing the advanced views to the clients. We keep a close watch at the most advanced social views about the knowledge of the test C-S43-2601 Certification. Our experts will renovate the test bank with the latest C-S43-2601 exam practice question and compile the latest knowledge and information into the questions and answers.

New C-S43-2601 Test Materials: https://www.braindumpsqa.com/C-S43-2601_braindumps.html

We know deeply that a reliable New C-S43-2601 Test Materials - SAP Certified Implementation Consultant - SAP S/4HANA Cloud Private Edition, Asset Management (C_S43_2601) valid practice test is our company's foothold in this competitive market, Choose our C-S43-2601 study guide, 100% pass SAP C-S43-2601 exams for sure, Hence, our accurate, reliable, and top-ranked SAP C-S43-2601 exam questions will help you qualify for your SAP C-S43-2601 certification on the first try, The most key consideration is the quality of C-S43-2601 actual test.

The overriding objective of the book is to teach students C-S43-2601 Instant Discount to use many layers of abstraction in solving problems and to see problems in small and in large, The Affordable Care Act is also part of the growing C-S43-2601 ecosystem of support services making life as an independent worker/freelancer easier and more secure.

SAP C-S43-2601 Exam | C-S43-2601 Valid Dumps - 10 Years of Excellence of New C-S43-2601 Test Materials

We know deeply that a reliable SAP Certified Implementation Consultant - SAP S/4HANA Cloud Private Edition, Asset Management (C_S43_2601) valid practice test is our company's foothold in this competitive market, Choose our C-S43-2601 study guide, 100% pass SAP C-S43-2601 exams for sure.

Hence, our accurate, reliable, and top-ranked SAP C-S43-2601 exam questions will help you qualify for your SAP C-S43-2601 certification on the first try.

The most key consideration is the quality of C-S43-2601 actual test, When you are shilly-shally too long, you may be later than others.
