When using the LCM Dark Site procedure in Prism Element or Prism Central, which Nutanix software component should be checked and upgraded first?

- **A. LCM Framework**
- B. NCC
- C. Foundation
- D. MSP

**Answer: A**

Explanation:

When using the LCM (Life Cycle Manager) Dark Site procedure, the LCM Framework should be checked and upgraded first. The LCM Framework is the core component responsible for orchestrating updates for other Nutanix software components. Ensuring the framework is up to date guarantees compatibility and reliability during subsequent upgrades.

- \* A. MSP: Incorrect, as MSP (Managed Service Provider) is not directly related to the LCM Dark Site procedure.
- \* B. Foundation: Incorrect, as Foundation is used for initial cluster deployment, not for lifecycle management.
- \* C. NCC: While NCC is critical for health checks, it does not need to be updated first in the LCM process.
- \* D. LCM Framework: Correct, as it manages the update process and must be updated first.

- A. Hyper-V
- B. ESXi
- C. XenServer
- **D. AHV**

**Answer: D**

Explanation:

Nutanix AHV (Acropolis Hypervisor) supports integrated IP address management (IPAM) as a built-in feature. IPAM allows administrators to dynamically allocate and manage IP addresses for VMs within a network segment. This functionality simplifies network management by automating the assignment of IPs without relying on external DHCP servers.

- \* A. ESXi: Incorrect, as ESXi does not include built-in IPAM.
- \* B. Hyper-V: Incorrect, as Hyper-V lacks integrated IPAM functionality.
- \* C. AHV: Correct, as AHV has built-in IPAM for automated IP address allocation.
- \* D. XenServer: Incorrect, as XenServer does not support integrated IPAM.

## NEW QUESTION # 76

What role does a Replication Factor of 2 or 3 play in ensuring data integrity and recovery?

- A. It reduces the need for offsite backup solutions.
- B. It limits the scope of hardware failures during recovery operations.
- **C. It ensures that multiple copies of data are available for recovery.**
- D. It accelerates data transfer to remote backup sites.

**Answer: C**

Explanation:

Replication Factor (RF) defines the number of copies of data stored in a Nutanix cluster. RF2 ensures two copies of data, and RF3 ensures three copies. This redundancy allows the system to maintain data integrity and recoverability even in the event of hardware failures.

- \* A. It limits the scope of hardware failures during recovery operations: Incorrect, as RF focuses on data replication, not limiting failure scopes.
- \* B. It ensures that multiple copies of data are available for recovery: Correct, as RF directly relates to data redundancy and recovery capabilities.
- \* C. It accelerates data transfer to remote backup sites: Incorrect, as RF does not affect remote backup speed.
- \* D. It reduces the need for offsite backup solutions: Incorrect, as RF works within the cluster, not as a replacement for offsite backups.
