

# Plat-Dev-210 Reliable Exam Dumps, Plat-Dev-210 Exam Details

2026 Latest ITCertMagic Plat-Dev-210 PDF Dumps and Plat-Dev-210 Exam Engine Free Share: <https://drive.google.com/open?id=1iqcCSekFrjxII48qZ-jrEKnKRFYI2k8O>

Propulsion occurs when using our Plat-Dev-210 preparation quiz. They can even broaden amplitude of your horizon in this line. Of course, knowledge will accrue to you from our Plat-Dev-210 training guide. There is no inextricably problem within our Plat-Dev-210 Learning Materials. Motivated by them downloaded from our website, more than 98 percent of clients conquered the difficulties. So can you as long as you buy our Plat-Dev-210 exam braindumps.

## Salesforce Plat-Dev-210 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none"><li>Integration Procedures: This section measures the skills of an Integration Architect and involves designing and configuring Integration Procedures to automate processes and integrate systems. It requires comparing and contrasting different elements and configurations within Integration Procedures to meet specific use cases. Candidates are also tested on selecting the correct elements and properties to satisfy functional requirements, ensuring seamless data flow and process automation.</li></ul>
Topic 2	<ul style="list-style-type: none"><li>OmniScripts: This portion of the exam measures the skills of a Business Analyst and focuses on the use of OmniScripts to create dynamic, guided user experiences. It includes comparing and contrasting various OmniScript elements and their configurations to fulfill given use cases. The section also examines the candidate's understanding of the JSON structure that supports OmniScripts, as well as the ability to select appropriate elements and properties to address functional requirements effectively.</li></ul>
Topic 3	<ul style="list-style-type: none"><li>Flexcards: This section of the exam measures the skills of a Solution Architect and covers the ability to design and configure FlexCards based on specific business requirements. It evaluates the candidate's knowledge in selecting appropriate card styles, defining data sources and fields, and implementing user actions across different card states. Additionally, this domain tests the understanding of constructing the underlying JSON data structure that powers the FlexCards framework, ensuring that the configured cards meet both functional and technical specifications.</li></ul>

Topic 4	<ul style="list-style-type: none"> <li>• <b>Expression Sets &amp; Decision Matrices:</b> This section measures the skills of a Logic Designer and covers the configuration and application of Expression Sets and Decision Matrices within Omnistudio tools. It requires demonstrating an understanding of how Expression Sets evaluate conditions and how Decision Matrices use rule-based logic to determine outcomes. This knowledge is essential for automating decisions and streamlining complex business processes.</li> </ul>

## Plat-Dev-210 Exam Details & New Plat-Dev-210 Dumps Files

The ITCertMagic is committed to making the Salesforce Plat-Dev-210 exam practice test question the ideal study material for quick and complete Salesforce Certified Omnistudio Developer (Plat-Dev-210) exam preparation. To achieve this objective the "ITCertMagic" is offering real, valid, and updated Plat-Dev-210 Exam Practice test questions in three different formats. These formats are ITCertMagic Plat-Dev-210 PDF dumps files, desktop practice test software, and web-based practice test software.

### Salesforce Certified Omnistudio Developer Sample Questions (Q106-Q111):

#### NEW QUESTION # 106

On a FlexCard canvas, several fields display with Salesforce data, but one of the fields shows only the label. What could cause this?

- A. There are No test Data test Parameters configured.
- B. In the FlexCard state, the Field type for the field does not match the type in the Salesforce record.
- C. In the Setup Pabel, {recordId} is misspelled in the Data Source Input Map.
- **D. The field name in the FlexCard state does not match the DataRaptorExtract's Output JSON Path name.**

**Answer: D**

Explanation:

According to the FlexCard Designer Overview page, one possible cause of a field showing only the label is that "the field name in the FlexCard state does not match the DataRaptor Extract's Output JSON Path name".

#### NEW QUESTION # 107

A developer has an existing DataRaptorLoad that insert Contact records with inputs as LastName and firstName. The DataRaptor works as expected when previewed.

The developer creates an integration Procedure to test the DataRaptor and is using a SetValue element in the Integration Procedure to set the first name and last name for the contact record. The DataRaptor and Integration Procedure are set up as shown in the exhibit below.

When the developer executes the Integration procedure in preview, the following error message displays:

Required fields are missing: [last Name]",

How should the developer address this issue?

- **A. SetValueContactDetails should have been added to Additional input of DataRaptor Post Action in Integration Procedure**
- B. The valid field names should be added in the Domain object field in the DataRaptor
- C. The DataRaptor Post Action in the integration procedure should have been executed before the Set Values Action

- D. The Set values Action Keys should include the DataRaptor Post Action element name path, e.g LoadContactDetails, lastname

**Answer: A**

Explanation:

According to the Integration Procedure Actions page, "To pass data from a Set Values action to a DataRaptor action, add the Set Values action name to the Additional Input field of the DataRaptor action."

### NEW QUESTION # 108

A developer needs to display read-only contact information in a OmniScript. The developer will format the information as a table, using merge codes to dynamically include first name, last name, street address, state, postal, code, and country from the data JSON. Which OmniScript element should the developer use to meet this requirement?

- **A. Text Block**
- B. Text area
- C. Edit Block
- D. Rich text Area

**Answer: A**

Explanation:

A Text Block element allows the developer to display read-only text in a table format, using merge codes to dynamically include data from the data JSON. A Rich Text Area element is used to display formatted text with images and links. A Text Area element is used to display editable text in a single line or multiple lines.

An Edit Block element is used to display editable fields in a form layout.

### NEW QUESTION # 109

An OmniScript displays data from an API using an Integration Procedure, but some of the data is missing. Which two configuration errors could cause this?

Choose 2 answers

- A. The Integration Procedure Preview Input Parameters do not match the JSON sent from the OmniScript.
- **B. The missing data is trimmed in the Integration Procedure Action Response JSON Path.**
- C. The JSON sent from the Integration Procedure Action does not match any of the Original Input for the Integration Procedure.
- **D. The element name for the missing data does not match the JSON node key in the Integration Procedure Response.**

**Answer: B,D**

Explanation:

When an OmniScript receives incomplete data from an Integration Procedure, the issue is typically in Response JSON path mapping or naming mismatches.

\* A. The missing data is trimmed in the Integration Procedure Action Response JSON Path - If the Response JSON Path only points to part of the structure, any nested or unrelated values are excluded from the output.

\* B. The element name for the missing data does not match the JSON node key in the Integration Procedure Response - OmniScript expects a matching node name to bind the data to UI elements. If the key doesn't match, that field will appear blank.

Incorrect Options:

\* C. Preview Input Parameters are only for testing in the Integration Procedure editor; they don't affect runtime execution.

\* D. Even if the JSON from the Integration Procedure Action is different from the original IP input, it would cause a failure or unexpected data, not necessarily missing specific values.

### NEW QUESTION # 110

A customer has a new Engagement Manager who is going to be the new Primary Contact for the Account.

What type of mapping does a DataRaptor Load use to create the new contact and then add it as the new Primary Contact?
