Our product is of high quality and the passing rate and the hit rate are both high.

Salesforce Certified Development Lifecycle and Deployment Architect Sample Questions (Q70-Q75):

NEW QUESTION # 70
An Architect is working on a Universal Containers project, and due to security concerns they cannot provide the Architect with production access. Instead, a central release management team will be responsible for performing production deployments for all development teams. How should an Architect leverage the Metadata API to ensure any metadata components necessary to deploy the project's functionality are properly communicated to the release management team?

- A. Send a package.xml file with associated metadata in a .zip file to the Release Management team
- B. Provide the Release Management team a copy of the audit trail from the sandbox you wish to deploy from
- C. Provide a spreadsheet of all components and utilize the metadata API's readMetadata call
- D. Create a change set in each sandbox and download the package.xml file for the release management team

Answer: A

NEW QUESTION # 71
The CTO at UniversalContainers is complaining to the software development managers that he has no visibility of their teams' work status.
What two software development methodologies should an architect suggest to solve this issue, and why?
Choose 2 answers

- A. DevOps, because monitoring and logging practices help you stay informed of performance in real time.
- B. Waterfall, because it defines a fixed schedule and duration for each activity.
- C. Kanban, because one of its basic elements is to make everything visible, creating consistent transparency of work items
- D. Scrum, because openness is one of the five core Scrum values.

Answer: C,D

Explanation:
Two software development methodologies that an architect should suggest to solve the issue of visibility are Scrum and Kanban. Scrum is based on the value of openness, which means that the team members and stakeholders share information and feedback regularly and transparently. Kanban is based on the principle of making everything visible, which means that the team uses a visual board to track the progress and status of the work items. Waterfall is not a good methodology for visibility, as it does not allow for frequent communication and feedback. DevOps is not a methodology, but a culture and practice that aims to improve collaboration and delivery across the software development lifecycle.

NEW QUESTION # 72
Universal Containers (UC) is implementing Salesforce for the first time. Their legacy CRM system is an on premise home-grown application written in Jav a. UC plans to implement a continuous integration process that mirrors their current standard. Under what conditions should an Architect recommend against continuous integration?

- A. Test scripts will be generated as part of the testing phase
- B. The client does not have budget for additional software
- C. There isn't a full sandbox available to leverage
- D. The Salesforce instance has only standard functionality

Answer: D

NEW QUESTION # 73
Universal Containers has multiple minor and major releases in a year .Minor releases have sample configuration changes, while major releases involve large number of complex code components. What is the deployment tools should an architect recommend for both types of releases?

- A. Change sets for minor releases and metadata API for major releases.
- B. Change sets for minor releases and Force.com IDE for major releases.
- C. Force.com IDE for minor releases and metadata API for major releases.

- D. Change sets for both minor releases and major releases.

Answer: A

NEW QUESTION # 74

Universal Containers has asked the salesforce architect to establish a governance framework to manage all of those Salesforce initiatives within the company. What is the first step the Architect should take?

- A. Implement a comprehensive DevOps framework for all initiatives within Universal Containers
- B. Implement a project management tool to manage all change requests on the project
- C. Establish a global Center of Excellence to define and manage Salesforce development standards across the organization
- D. Identify relevant Stakeholders from within Universal Containers to obtain governance goals and objectives

Answer: D

Explanation:

The first step in establishing a governance framework is to identify the relevant stakeholders from within the organization to obtain their goals and objectives. This will help to define the scope, roles, responsibilities, and processes for managing the Salesforce initiatives. The other options are possible steps to take later, but not the first one.
