Understanding and mutual benefits are the cordial principles of services industry. We know that tenet from the bottom of our heart, so all parts of

service are made due to your interests.

CMT Association CMT Level 1 Exam Sample Questions (Q60-Q65):

NEW QUESTION # 60

When a great majority of investors have the same view of the market:

- A. It is safe to assume that the market may trend to further highs
- B. It is safe to assume that a reversal of trend is a low-probability outcome
- C. Market sentiment is positive
- **D. It is a warning to expect a reversal contrary to the majority opinion**

Answer: D

Explanation:

Detailed Explanation:

This is the Theory of Contrary Opinion. When the crowd reaches a consensus (extreme majority bullish or bearish), everyone has likely already acted on that view (bought or sold). With no one left to push the trend further, the market is vulnerable. Thus, it is a warning to expect a reversal.

NEW QUESTION # 61

Which of the following describes an equally weighted average?

- A. Considers the market capitalization of each security in the average
- **B. An investor invests the same dollar amount in each security**
- C. Is the way the Dow Jones Industrial Average is calculated
- D. Is adjusted by a divisor

Answer: B

Explanation:

Detailed Explanation:

In an equally weighted average (like the S&P 500 Equal Weight), the calculation assumes the investor places the same dollar amount into every stock. This contrasts with price-weighted (DJIA) or cap-weighted (S&P 500 standard) indices.

NEW QUESTION # 62

On balance volume (OBV) is USEFUL to:

- A. Clarify volume trends
- **B. All the above**
- C. Confirm price
- D. Spot divergence

Answer: B

Explanation:

Detailed Explanation:

OBV is a cumulative volume indicator. It is used to:

* Confirm price: If price rises, OBV should rise.

* Spot Divergence: If price rises but OBV falls, it warns of weakness.

* Clarify trends: It shows if volume is flowing in (accumulation) or out (distribution).

NEW QUESTION # 63

As per the theory of contrary opinion, a high degree of consensus normally precedes a:

- A. Short-term consolidation

- B. Trend continuation
- C. Pause within an existing trend
- **D. Trend reversal**

Answer: D

Explanation:

Detailed Explanation:

When consensus is high (e.g., 90% bullish), the market is saturated. The trend cannot continue because there are no new buyers. This extreme sentiment typically marks a market top (or bottom), preceding a major trend reversal.

NEW QUESTION # 64

If a fund has a beta of 1.2, then it has:

- A. 0.2% more volatility
- B. 20% less volatility
- **C. 20% more volatility**
- D. 2% more volatility

Answer: C

Explanation:

Detailed Explanation:

Beta measures volatility relative to the market (Market Beta = 1.0).

A Beta of 1.2 means the fund is expected to move 1.2 times as much as the market.

$1.2 - 1.0 = 0.2$. This represents 20% more volatility than the overall market.

NEW QUESTION # 65

.....

If you are planning to pass the CMT-Level-I exam, you can choose our CMT-Level-I practice materials as your learning material since our products are known as the most valid exam engine in the world, which will definitely be beneficial to your preparation for exams.
