最新SAP C_ABAPD_2507考題套裝和專業的PDFExamDumps - 資格考試的領先提供商

PDFExamDumps 是個很好的為 SAP C_ABAPD_2507 認證考試提供方便的網站。根據過去的考試練習題和答案的研究，它能有效的捕捉 SAP C_ABAPD_2507 認證考試試題內容。我們提供的 C_ABAPD_2507 考試練習題與真實的考試題有緊密的相似性。而且 C_ABAPD_2507 考題一直備受考生的稱贊，很多考生使用後，都知道出題高，讓他們順利過關。

最新的 SAP Certified Associate C_ABAPD_2507 免費考試真題 (Q66-Q71):

問題 #66

Which function call returns 0?

- A. `find_any_not_of( val 'ABAP ABAP abap' sub = 'AB' )`
- B. `find_any_of( val = "ABAP ABAP abap" sub = "AB" )`
- C. `Count ( val - 'ABAP ABAP abap' sub - 'AB' )`
- D. `Count_any_of( val - 'ABAP ABAP abap' sub "AB" )`

答案: A

解題說明:

The function `find_any_not_of` returns the position of the first character in the string `val` that is not contained in the string `sub`. If no such character is found, the function returns 0. In this case, the string `val` contains only the characters A, B, and a, which are all contained in the string `sub`, so the function returns 0. The other functions return positive values, as follows:

`Count_any_of` returns the number of occurrences of any character in the string `sub` within the string `val`. In this case, it returns 8,

since there are 8 A's and B's in val.

Count returns the number of occurrences of the string sub within the string val. In this case, it returns 2, since there are 2 AB's in val. find_any_of returns the position of the first character in the string val that is contained in the string sub. In this case, it returns 1, since the first character A is in sub. Reference: String Functions - ABAP Keyword Documentation, Examples of String Functions - ABAP Keyword Documentation

問題 #67

Given the following Core Data Services (CDS) View Entity data definition:

```
DEFINE VIEW ENTITY demo_cds_view_entity
AS SELECT FROM spfli
{
  cityfrom,
  cityto,
  carrid,
  connid
}
```

When you attempt to activate the definition, what will be the response?

- A. Activation error due to missing annotation "@AbapCatalog.sqlViewName"
- B. Activation will be successful
- C. Activation error due to no key defined
- D. Activation error due to missing annotation "@AccessControl.authorizationCheck"

答案: C

解題說明:

Comprehensive and Detailed Explanation From Exact Extract:

* CDS View Entities are the successor of classic DDIC-based CDS views and do not use the CDS- managed DDIC view; therefore @AbapCatalog.sqlViewName (used for classic DDIC-based views) is not required for view entities. This eliminates option B.

* RAP and CDS modeling rely on key fields identified by the keyword key in the underlying CDS view to uniquely identify instances; this key is fundamental for BOs and their sources. A view entity without any key elements therefore lacks a primary key and will not pass activation. This supports option A.

* Authorization annotations are component annotations; their absence does not by itself block first-time activation of a CDS entity. This rules out option D as the primary cause.

Study-Guide anchors: CDS View Entities (successor of DDIC-based views; no SQL view name), requirement for key elements to define primary keys, and activation behavior for component annotations.

問題 #68

In what order are objects created to generate a RESTful Application Programming application?

- A). Database table 1
- B). Service binding Projection view 4
- C). Service definition 3
- D). Data model view 2

- A. A D C B
- B. B D C A
- C. D A B C
- D. C B A B

答案: A

解題說明:

The order in which objects are created to generate a RESTful Application Programming application is A, D, C, B. This means that the following steps are followed:

First, a database table is created to store the data for the application. A database table is a CDS DDIC-based view that defines a join or union of database tables. A database table has an SQL view attached and can be accessed by Open SQL or native SQL. Second, a data model view is created to define a data model based on the database table or other CDS view entities. A data model view is a CDS view entity that can have associations, aggregations, filters, parameters, and annotations. A data model view can also

define the behavior definition and implementation for the business object.

Third, a service definition is created to define the service interface for the application. A service definition is a CDS view entity that defines a projection on a data model view or another service definition. A service definition can also define service metadata, such as service name, version, description, and annotations.

Fourth, a service binding is created to define the service binding for the application. A service binding is a CDS view entity that defines a projection on a service definition. A service binding can also define the service protocol, such as OData V2, OData V4, or REST, and the service URL.

問題 #69

You want to check the behavior of an ordinary class ZCL_ORDINARY with class LTCL_TEST.
How do you specify LTCL_TEST as a test class?

- A. Use the addition "FOR TESTING: LTCL_TEST" in the class declaration of ZCL_ORDINARY.
- **B. Use the addition "FOR TESTING" in the class declaration of LTCL_TEST.**
- C. Create LTCL_TEST in a special package that is reserved for test classes.
- D. Create a parameter in the SETUP method of LTCL_TEST and set its value to "Test".

答案: B

問題 #70

Given the following code which defines an SAP HANA database table in SAP S/4HANA Cloud, public edition:

```
@EndUserText.label : 'Draft table for entity /DMO/R_AGENCY'
```

```
@AbapCatalog.tableCategory : #TRANSPARENT
```

```
@AbapCatalog.deliveryClass : #A
```

```
@AbapCatalog.dataMaintenance : #RESTRICTED
```

```
define table /dmo/agency_d {
```

```
key mandt : mandt not null;
```

```
key agencyid : /dmo/agency_id not null;
```

```
key draftuid : sdraft_uid not null;
```

```
name : /dmo/agency_name;
```

```
street : /dmo/street;
```

```
postalcode : /dmo/postal_code;
```

```
city : /dmo/city;
```

```
}
```

You are a consultant and the client wants you to extend this SAP database table with a new field called zz_countrycode on line #14.
Which of the following is the correct response?

- A. The database table can be extended whether extensibility enabled or not if it is assigned to a software component of type "ABAP Cloud".
- B. The database table can be extended once it has extensibility been enabled by the customer.
- C. The database table can be extended whether extensibility enabled or not if it is assigned to a software component of type "Standard ABAP".
- **D. The database table cannot be extended since it has not been extensibility enabled by SAP.**

答案: D

解題說明:

Comprehensive and Detailed Explanation From Exact Extract:

In SAP S/4HANA Cloud, public edition, database tables are only extendable if SAP has explicitly enabled extensibility for them via metadata. This is a strict limitation in the ABAP Cloud model to ensure upgrade- stability and isolation of extensions from SAP-owned objects.

Key facts:

* The annotation @AbapCatalog.dataMaintenance : #RESTRICTED implies that this table is not editable or extensible by default.

* The table resides in a delivered component and unless SAP marks it as extensible, customers cannot add fields like zz_countrycode.

* Even if the table is in an ABAP Cloud-compliant software component, extensibility must be explicitly enabled by SAP.

* Therefore, Option B is the only correct and valid answer.

Incorrect options:

* Option A and D are wrong because extensibility is not determined by the software component type alone.

* Option C is wrong because customers cannot enable extensibility for SAP-delivered tables; it must be pre-approved by SAP.
