You are creating an API proxy. Which of the following is a valid path prefix?

- A. /soap/opu/odata
- B. /sap/odu/odata
- C. /sap/opu/odata
- D. /sap/opo/odata

答案：C

解題說明：
In SAP systems (e.g., S/4HANA, SAP Gateway), OData services follow a standard URL path:
/sap/opu/odata # The valid and official prefix for OData services.
Example: /sap/opu/odata/sap/API_BUSINESS_PARTNER
Other options:
/sap/opo/odata and /sap/odu/odata # Typographical variations, not valid.
/soap/opu/odata # Incorrect, since OData is not SOAP-based.
Thus, the valid prefix is /sap/opu/odata.

問題 #14

You configured a content modifier as follows: Action Create. Name: ProductID. Source Type: XPath. Source Value: //ProductID. Data Type: java lang string. After testing the content modifier, you receive an error message that contains the following fragment: java.lang.ClassNotFoundException java lang string. What caused the error message?

- A. Incorrect data type
- B. Incorrect name
- C. Incorrect source type
- D. Incorrect source value

答案：A

解題說明：

The error message is caused by an incorrect data type in the content modifier configuration. The data type should be java.lang.String instead of java lang string. The data type defines the type of the value that will be stored in the header or property of the message. It should match one of the supported Java classes, such as java.lang.String, java.lang.Integer, java.lang.Boolean, and so on. If the data type is not valid, a java.lang.ClassNotFoundException will be thrown. Reference: Content Modifier | SAP Help Portal, Getting clear with SAP Integration Suite Content Modifier | SAP Blogs
