## H12-841\_V1.5認證, H12-841\_V1.5參考資料

最近，Fast2test開始提供給大家很多關於IT認證考試的最新的資料。比如H12-841\_V1.5考古題都是根據最新版的IT認證考試研發出來的。可以告訴大家最新的與考試相關的消息。考試的大綱有什麼變化，以及考試中可能會出現的新題型，這些內容都包括在了資料中。所以，如果你想參加IT考試，最好利用Fast2test的資料。因為只有這樣你

才能更好地準備考試。

## 最新的 Huawei-certification H12-841\_V1.5 免費考試真題 (Q198-Q203):

### 問題 #198

In Huawei's SD-WAN solution, which of the following service optimization strategies can "assign the highest priority to VoIP services to ensure smooth calls"?

- A. QoS priority scheduling based on application type (VoIP is the highest)
- B. All services are forwarded with the same priority.
- C. Traffic distribution based on link bandwidth
- D. Limit VoIP service bandwidth to avoid consuming excessive resources.

答案: A

### 問題 #199

In the WAN BGP protocol, which of the following attributes is an "optional non-transitional attribute of a BGP route, used to convey the local AS's preference for that route to its neighbors"?

- A. Local Preference
- B. AS\_PATH
- C. Next Hop
- D. MED

答案: A

### 問題 #200

In a WAN BGP protocol deployment, if it is necessary to "control the range of routes advertised by the local AS to its neighbors, and only advertise routes to specific network segments", which of the following policies should be configured?

- A. BGP Neighbor MD5 Authentication
- B. BGP route aggregation
- C. BGP route filtering (e.g., prefix-list)
- D. Adjust BGP Local Preference properties

答案: C

### 問題 #201

In a WAN BGP protocol deployment, if it is necessary to "reject receiving routes to a specific network segment advertised by a neighbor (such as (192.168.10.0/24))", which of the following filtering policies should be configured?

- A. Enable BGP route aggregation
- B. Use a prefix-list to reject the network segment in the BGP neighbor inbound direction.
- C. Adjust BGP Local Preference properties
- D. Configure BGP neighbor MD5 authentication

答案: B

### 問題 #202

(On a virtualized campus network deployed using iMaster NCE-Campus, implementing mutual access between users in different virtual networks only requires the administrator to deploy a policy control matrix on iMaster NCE-Campus.)

- A. TRUE
- B. FALSE

答案: B

解題說明:

In a virtualized campus network built with iMaster NCE-Campus, virtual networks (VNs) are designed to be logically isolated by default. This isolation is achieved through VXLAN and VPN instances, ensuring that users in different VNs cannot communicate unless explicit interconnection mechanisms are configured. While the policy control matrix is an important component of access control, it is not sufficient by itself to implement mutual access between users in different VNs.

According to HCIP Datacom Campus Network documentation, the policy control matrix is used to define inter-group or inter-user access permissions, typically based on security groups. It controls whether traffic is permitted, denied, or restricted between different user groups. However, the policy control matrix only defines security policy behavior and does not establish Layer 3 connectivity between isolated virtual networks.

To enable mutual access between users in different VNs, the administrator must also configure inter-VN connectivity mechanisms, such as external networks, border nodes, or route import and export policies. This includes enabling route exchange between VPN instances using BGP EVPN and configuring appropriate gateway or routing paths. Only after Layer 3 reachability is established can the policy control matrix take effect to permit or restrict traffic.

Therefore, deploying a policy control matrix alone does not meet the technical requirements for inter-VN communication.

Both connectivity configuration and policy control are required. Hence, the statement is incorrect, and the correct answer is FALSE.
