100% Pass Unparalleled Salesforce - Reasonable Mule-Dev-301 Exam Price

With Mule-Dev-301 practice test questions you can not only streamline your exam Salesforce Mule-Dev-301 exam preparation process but also feel confident to pass the challenging Mule-Dev-301 Exam easily. One of the top features of Salesforce Mule-Dev-301 valid dumps is their availability in different formats.

Salesforce Certified MuleSoft Developer II Sample Questions (Q32-Q37):

NEW QUESTION # 32
A developer has created the first version of an API designed for business partners to work commodity prices.
What should developer do to allow more than one major version of the same API to be exposed by the implementation?

- A. In Design Center, open the RAML and modify each operation to include the major version number
- B. In Anypoint Studio, generate scaffolding from the RAML, and the modify the <http:listerner> in the generated flows to include a parameter to replace the version number
- C. In Anypoint Studio, generate scaffolding from the RAML, and then modify the flow names generated by APIKit to include a variable with the major version number
- D. In Design Center, open the RAML and modify baseUn to include a variable that indicates the version number

Answer: D

Explanation:
To allow more than one major version of the same API to be exposed by the implementation, the developer should modify the baseUri property in the RAML file to include a variable that indicates the version number. The baseUri property defines the base URL of the API and can include variables that are replaced with actual values when mocking or deploying the API. By using a variable for the version number, the developer can expose different versions of the API using different base URLs and avoid conflicts or confusion. Reference: https://docs.mulesoft.com/api-designer/design-modify-raml-specs#baseuri
https://docs.mulesoft.com/api-manager/2.x/api-versioning

NEW QUESTION # 33

Refer to the exhibit.

```xml
<build>
    <resources>
        <resource>
            <directory>src/main/resources</directory>
            <filtering>true</filtering>
        </resource>
    </resources>
    <testResources>
        <testResource>
            <directory>src/test/resources</directory>
            <filtering>true</filtering>
        </testResource>
        <testResource>
            <directory>src/test/funmon</directory>
            <filtering>true</filtering>
            <targetPath>funmon</targetPath>
        </testResource>
    </testResources>
    <pluginManagement>
        <plugins>
            <plugin>
                <groupId>org.apache.maven.plugins</groupId>
                <artifactId>maven-resources-plugin</artifactId>
                <configuration>
                    <nonFilteredFileExtensions>
                        <nonFilteredFileExtension>p12</nonFilteredFileExtension>
                        <nonFilteredFileExtension>crt</nonFilteredFileExtension>
                        <nonFilteredFileExtension>pem</nonFilteredFileExtension>
                    </nonFilteredFileExtensions>
                </configuration>
            </plugin>
```
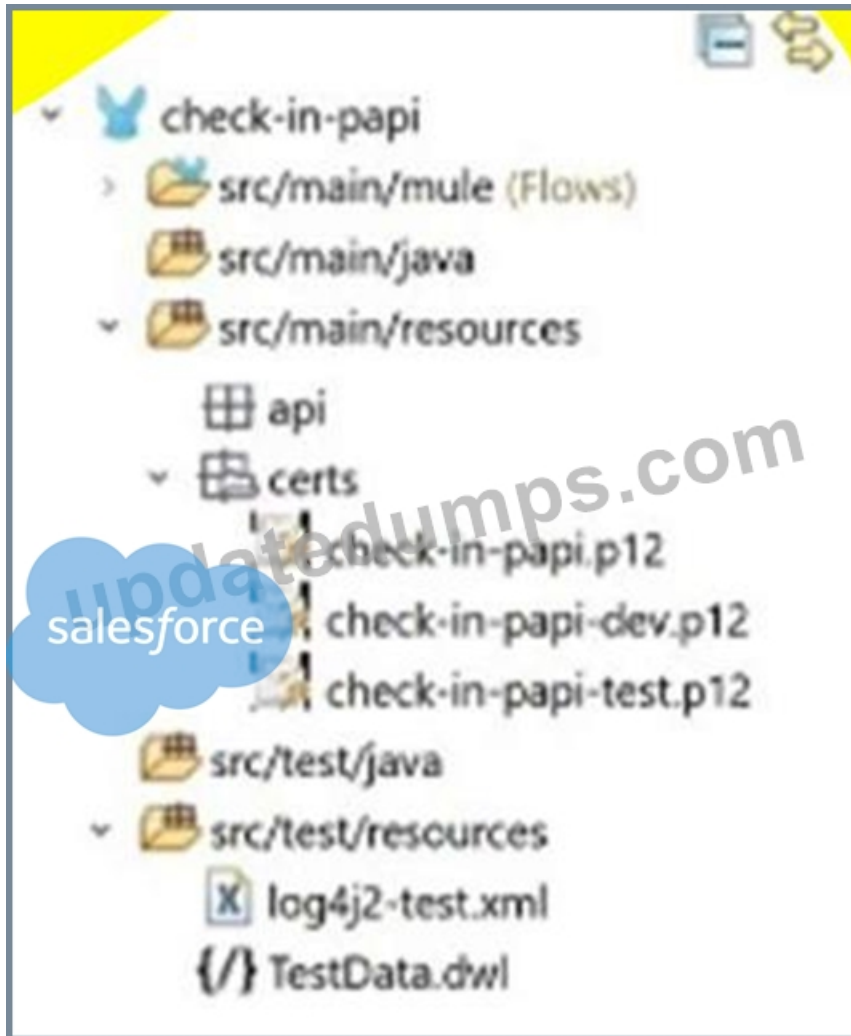

A Mule application pom.xml configures the Maven Resources plugin to exclude parsing binary files in the project's src/main/resources/certs directory.

Which configuration of this plugin achieves a successful build?

- A.
- B. ☐
- C. ☐

- D.

Answer: B

Explanation:
To configure the Maven Resources plugin to exclude parsing binary files in the project's src/main/resources/certs directory, option C should be used. This option specifies that any files with .cer or .jks extensions under the certs directory should be excluded from filtering. Filtering is a process of replacing placeholders with actual values in resource files during the build process. Binary files

should not be filtered because they may become corrupted or unusable. Reference: https://maven.apache.org/plugins/maven-resources-plugin/examples/filter.html https://maven.apache.org/plugins/maven-resources-plugin/examples/include-exclude.html

NEW QUESTION # 34

Refer to the exhibit.

What is the result if "Insecure" selected as part of the HTTP Listener configuration?

- A. Mutual TLS authentication will be enabled between this HTTP Listener and an HTTP client
- B. The HTTP Listener will trust any certificate presented by the HTTP client
- C. The HTTP listener will only accept HTTP requests
- D. The HTTP Lister will accept any unauthenticated request

Answer: C

Explanation:

Based on the exhibit below, if 'Insecure' is selected as part of the HTTP Listener configuration, the HTTP listener will only accept HTTP requests. This means that no TLS context will be configured for this listener and no encryption or authentication will be applied to incoming requests. The protocol attribute of this listener will be set to HTTP instead of HTTPS. Reference: https://docs.mulesoft.com/http-connector/1.6/http-listener-ref#insecure

NEW QUESTION # 35

A Mule application deployed to a standardalone Mule runtime uses VM queues to publish messages to be consumed asynchronously by another flow.

In the case of a system failure, what will happen to in-flight messages in the VM queues that have been consumed?

- A. For transient queues, the message will be processed after the system comes online
- B. For persistent queues, the message will be processed after the system comes online
- C. For any type of queue, the message will be lost
- D. For nay type of queue, the message will be processed after the system comes online

Answer: B

Explanation:

In case of a system failure, in-flight messages in persistent VM queues that have been consumed will be processed after the system comes online. This is because persistent VM queues store messages on disk and guarantee delivery even if there is a system crash or restart. Therefore, any in-flight messages that have been consumed but not processed will be recovered from disk and processed when the system is back online. Reference: https://docs.mulesoft.com/mule-runtime/4.3/vm-connector#persistent-queues

NEW QUESTION # 36

A company with MuleSoft Titanium develops a Salesforce System API using MuleSoft out-of-the-box Salesforce Connector and deploys the API to CloudHub.

Which steps provide the average number of requests and average response time of the Salesforce Connector?

- A. Access Anypoint Monitoring built-in dashboard.
  Select a resource.
  Locate the information under Log Manager < Raw Data.
- B. Access Anypoint Monitoring's built-in dashboard. Select a resource.
  Locate the information under the Connectors tab.
- C. Access Anypoint Monitoring's built-in dashboard
  Seclect a resource.
  Create a custom dashboard to retrieve the information.
- D. Change the API Implementation to capture the information in the log.
  Retrieve the information from the log file.

Answer: B

Explanation:

To get the average number of requests and average response time of the Salesforce Connector, the developer should access Anypoint Monitoring's built-in dashboard, select a resource (such as an application or an API), and locate the information under the Connectors tab. The Connectors tab shows metrics for each connector used by the resource, such as average requests per minute, average response time, and failures. Reference: https://docs.mulesoft.com/monitoring/built-in-dashboard-reference

NEW QUESTION # 37

......

As for our Mule-Dev-301 exam braindump, our company masters the core technology, owns the independent intellectual property rights and strong market competitiveness. What is more, we have never satisfied our current accomplishments. Now, our company is specialized in design, development, manufacturing, marketing and retail of the Mule-Dev-301 test question, aimed to provide high quality product, solutions based on customer's needs and perfect service of the Mule-Dev-301 Exam braindump. At the same time, we have formed a group of passionate researchers and experts, which is our great motivation of improvement. Every once in a while we will release the new version study materials. You will enjoy our newest version of the Mule-Dev-301 study prep after you have purchased them. Our ability of improvement is stronger than others. New trial might change your life greatly.
