## **Reliable Mule-Dev-201 Learning Materials & Mule-Dev-201 Test Dumps.zip**

Knowledge is defined as intangible asset that can offer valuable reward in future, so never give up on it and our Mule-Dev-201 exam preparation can offer enough knowledge to cope with the exam effectively. To satisfy the needs of exam candidates, our experts wrote our Mule-Dev-201 practice materials with perfect arrangement and scientific compilation of messages, so you do not need to study other numerous materials to find the perfect one anymore. Our Mule-Dev-201 Exam Quiz will offer you the best help. And our Mule-Dev-201 training material will never let you down.

## **Salesforce Certified MuleSoft Developer Sample Questions (Q140-Q145):**

### **NEW QUESTION # 140**

What asset cannot be created using Design Center?

- A. API portals
- B. API specifications
- C. API fragments
- D. Mule Applications

**Answer: A**

Explanation:

API portal are created by API Exchange and cannot be created by Design Center

### **NEW QUESTION # 141**

A Scatter-Gather processes three separate HTTP requests. Each request returns a Mule event with a JSON payload. What is the final output of the Scatter-Gather?

- A. An Object containing all three JSON payload Objects

- B. An Object containing all three Mule event Objects
- C. An Array of the three Mule event Objects
- D. An Array of the three JSON payload Objects

**Answer: B**

Explanation:

Correct answer is An Object containing all three Mule event Objects

The Scatter-Gather component is a routing event processor that processes a Mule event through different parallel processing routes that contain different event processors. Each route receives a reference to the Mule event and executes a sequence of one or more event processors. Each of these routes uses a separate thread to execute the event processors, and the resulting Mule event can be either the same Mule event without modifications or a new Mule event with its own payload, attributes, and variables. The Scatter-Gather component then combines the Mule events returned by each processing route into a new Mule event that is passed to the next event processor only after every route completes successfully.

The Scatter-Gather component executes each route in parallel, not sequentially. Parallel execution of routes can greatly increase the efficiency of your Mule application and may provide more information than sequential processing.

Sample output is as below

Table Description automatically generated with low confidence

□ MuleSoft Documentation reference :<https://docs.mulesoft.com/mule-runtime/4.3/scatter-gather-concept>

**NEW QUESTION # 142**

A Mule project contains a MySQL Database dependency. The project is exported from Anypoint Studio so it can be deployed to CloudHub.

What export options create the smallest deployable archive that will successfully deploy to CloudHub?

What export option creates the smallest deployable archive that will successfully deploy to CloudHub?

- A. □
- B. □
- C. □
- D. □

**Answer: A**

**NEW QUESTION # 143**

Refer to the exhibit.

□ What

is the response to a web client request to <http://localhost:8081>?

- A. Validation Error
- B. null
- C. After
- D. before

**Answer: A**

Explanation:

□

**NEW QUESTION # 144**

Correct answer is {customerID}.

- A. `fun toUpper(userName) = upper(userName)`
- B. `fun toUpper(userName) -> upper(userName)`
