# CompTIA XK0-005 Download Free Dumps & Online XK0-005 Version

Our CompTIA XK0-005 test braindump materials is popular based on that too. As we all know the passing rate for exams is low, the wise choice for candidates will select valid CompTIA XK0-005 test braindump materials to make you pass exam surely and fast. Our CompTIA XK0-005 test simulations will help you twice the result with half the effort.

# CompTIA Linux+ Certification Exam Sample Questions (Q354-Q359):

**NEW QUESTION # 354**
The following represents a partial listing of a user's .bashrc file:
HISTSIZE=800
HISTFILESIZE=1000
umask 2002
HISTCONTROL=ignoreboth
When the user opens a terminal, an error message appears:
Octal number out of range
Which of the following lines in the partial .bashrc should be modified to prevent the error from occurring?

- A. HISTSIZE=800
- B. HISTFILESIZE=1000
- C. umask 2002
- D. HISTCONTROL=ignoreboth

**Answer: C**

**NEW QUESTION # 355**
A Linux administrator is troubleshooting a systemd mount unit file that is not working correctly. The file contains:
[root@system] # cat mydocs.mount
[Unit]
Description=Mount point for My Documents drive
[Mount]
What=/dev/drv/disk/by-uuid/94afc9b2-ac34-ccff-88ae-297ab3c7ff34
Where=/home/user1/My Documents
Options=defaults
Type=xfs
[Install]
WantedBy=multi-user.target
The administrator verifies the drive UUID correct, and user1 confirms the drive should be mounted as My Documents in the home directory. Which of the following can the administrator do to fix the issues with mounting the drive? (Select two).

- A. Change the What entry to /dev/drv/disk/by-uuid/94afc9b2\-ac34\-ccff\-88ae\-297ab3c7ff34.
- B. Add quotes to the What and Where entries, such as What="/dev/drv/disk/by-uuid/94afc9b2-ac34-ccff-88ae-297ab3c7ff34" and Where="/home/user1/My Documents".
- C. Rename the mount file to home-user1-My\x20Documents.mount.
- D. Change the Where entry to Where=/home/user1/my\ documents.
- E. Change the Where entry to Where=/home/user1/My\x20Documents.
- F. Rename the mount file to home-user1-my-documents.mount.

**Answer: C,E**

Explanation:
The mount unit file name and the Where entry must be escaped to handle spaces in the path.ReferenceThe mount unit file name must be named after the mount point directory, with spaces replaced by \x20. See How to escape spaces in systemd unit files? and systemd.mount.The Where entry must use \x20 to escape spaces in the path. See systemd.mount and The workaround is to use /usr/bin/env followed by the path in quotes..

**NEW QUESTION # 356**
A technician wants to secure a sensitive workstation by ensuring network traffic is kept within the local subnet. To accomplish this task, the technician executes the following command:
echo 0 > /proc/sys/net/ipv4/ip_default_ttl

Which of the following commands can the technician use to confirm the expected results?
(Choose two.)

- A. traceroute
- B. iperf
- C. arp
- D. ip
- E. tcpdump
- F. route

**Answer: A,E**

Explanation:
https://hackertarget.com/tcpdump-examples/

**NEW QUESTION # 357**
A new file was added to a main Git repository. An administrator wants to synchronize a local copy with the contents of the main repository. Which of the following commands should the administrator use for this task?

- A. git push
- B. git status
- C. git reflog
- D. git pull

**Answer: D**

Explanation:
Explanation
The command iptables -t nat -A PREROUTING -p tcp --dport 80 -j DNAT --to-destination
192.0.2.25:3128 adds a rule to the nat table that redirects all incoming TCP packets with destination port 80 (HTTP) to the proxy server 192.0.2.25 on port 3128. This is the correct way to achieve the task. The other options are incorrect because they either delete a rule (-D), use the wrong protocol (top instead of tcp), or use the wrong port (81 instead of 80). References: CompTIA Linux+ (XK0-005) Certification Study Guide, Chapter 12: Managing Network Connections, page 381.

**NEW QUESTION # 358**
A Linux administrator is troubleshooting an issue in which users are not able to access
https://portal.comptia.org from a specific workstation. The
administrator runs a few commands and receives the following output:
Which of the following tasks should the administrator perform to resolve this issue?

- A. Add a network route from the 10.10.10.0/24 to the 192.168.0.0/16.
- B. Clear the local DNS cache on the workstation and rerun the host command.
- C. Update the name server in resolv. conf to use an external DNS server.
- D. Remove the entry for portal . comptia.org from the local hosts file.

**Answer: D**

Explanation:
Explanation
The best task to perform to resolve this issue is B. Remove the entry for portal.comptia.org from the local hosts file. This is because the local hosts file has a wrong entry that maps portal.comptia.org to 10.10.10.55, which is different from the actual IP address of 192.168.1.55 that is returned by the DNS server. This causes a mismatch and prevents the workstation from accessing the website. By removing or correcting the entry in the hosts file, the workstation will use the DNS server to resolve the domain name and access the website successfully.
To remove or edit the entry in the hosts file, you need to have root privileges and use a text editor such as vi or nano. For example, you can run the command:
sudo vi /etc/hosts
and delete or modify the line that says:
10.10.10.55 portal.comptia.org

Then save and exit the file.

**NEW QUESTION # 359**

......

Our team of experts updates actual CompTIA Linux+ Certification Exam (XK0-005) questions regularly so you can prepare for the CompTIA Linux+ Certification Exam (XK0-005) exam according to the latest syllabus.
