The certification is necessary to get a job in your desired Cisco company. Success in the test gives you an edge over the others because you will have certified skills that will make a good impression on the interviewer. Most people preparing for the Implementing and Operating Cisco Security Core Technologies (350-701) exam are confused about preparation. How will they get real and updated Implementing and Operating Cisco Security Core Technologies (350-701) exam questions? In the case of studying with outdated Implementing and Operating Cisco Security Core Technologies (350-701) practice questions, you will fail and lose your resources.

Cisco 350-701 SCOR: Target Audience

The Cisco 350-701 exam is created for those IT professionals who work in the networking field. The test is targeted at the engineers and architects specializing in unified communications, video, and voice. To pass this exam with flying colors, the applicants must demonstrate that they have the ability to operate and implement core security technologies, which include Cloud security, network security, secure network access, endpoint protection and detection, enforcement, and visibility. In addition, candidates should also have familiarity with TCP/IP networking and Ethernet. It is recommended that the students also have knowledge of Windows OS. In addition, they should know the fundamental concepts of networking security and possess expertise in Cisco IOS networking.

Cisco 350-701 Exam covers a wide range of topics related to network security. 350-701 exam tests the candidates' knowledge of security technologies such as Cisco Identity Services Engine (ISE), Cisco Advanced Malware Protection (AMP), Cisco Firepower Next-Generation Firewall (NGFW), and Cisco Umbrella. It also evaluates the candidates' understanding of security policies, procedures, and best practices, and their ability to implement and manage security solutions.

Cisco Implementing and Operating Cisco Security Core Technologies Sample Questions (Q494-Q499):

NEW QUESTION # 494

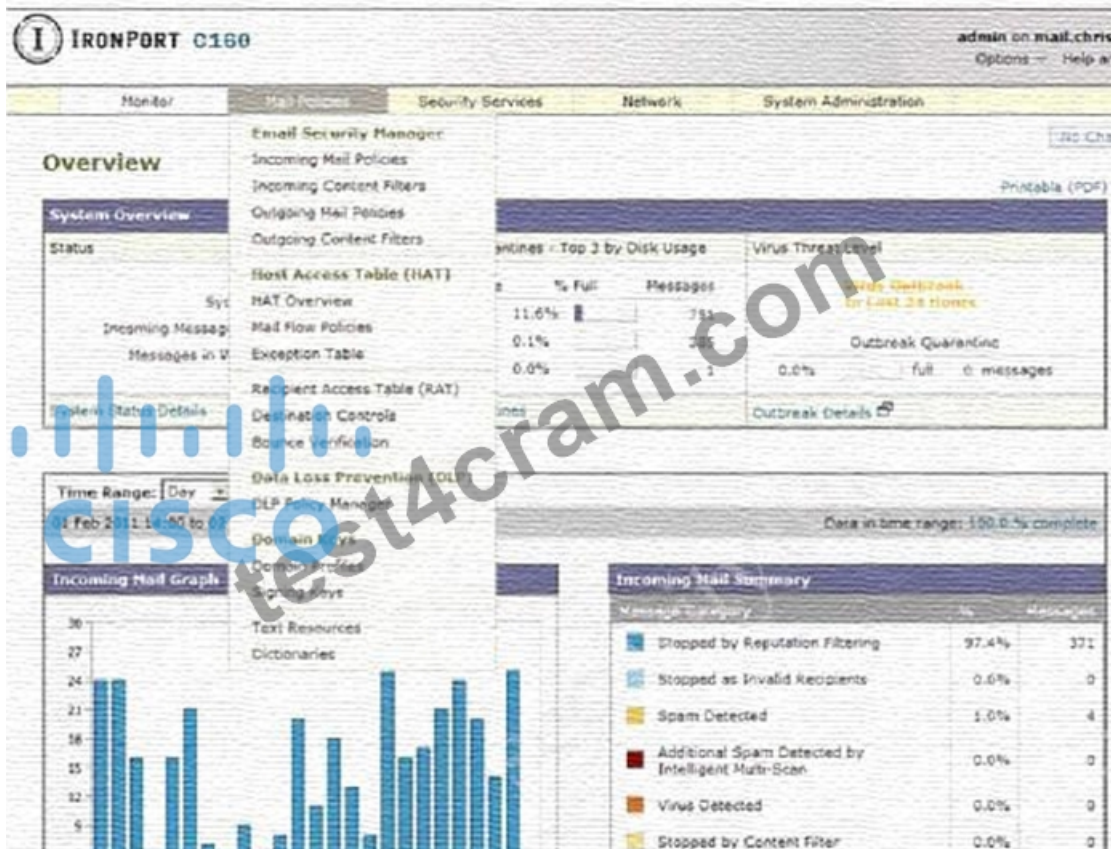

An organization received a large amount of SPAM messages over a short time period. In order to take action on the messages, it must be determined how harmful the messages are and this needs to happen dynamically. What must be configured to accomplish this?

- A. Configure the Cisco ESA to modify policies based on the traffic seen
- B. Configure the Cisco WSA to modify policies based on the traffic seen
- C. Configure the Cisco WSA to receive real-time updates from Talos
- D. Configure the Cisco ESA to receive real-time updates from Talos

Answer: A

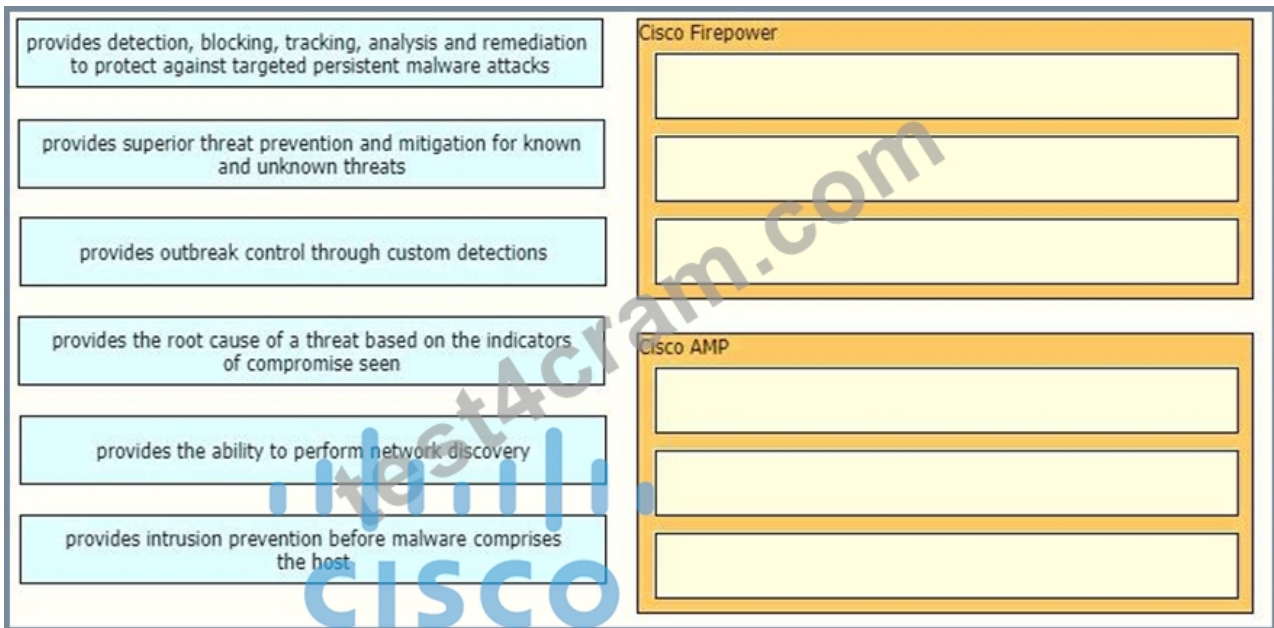

Explanation:

ExplanationExplanationThe Mail Policies menu is where almost all of the controls related to email filtering happens. All the security and content filtering policies are set here, so it's likely that, as an ESA administrator, the pages on this menu are where you are likely to spend most of your time.

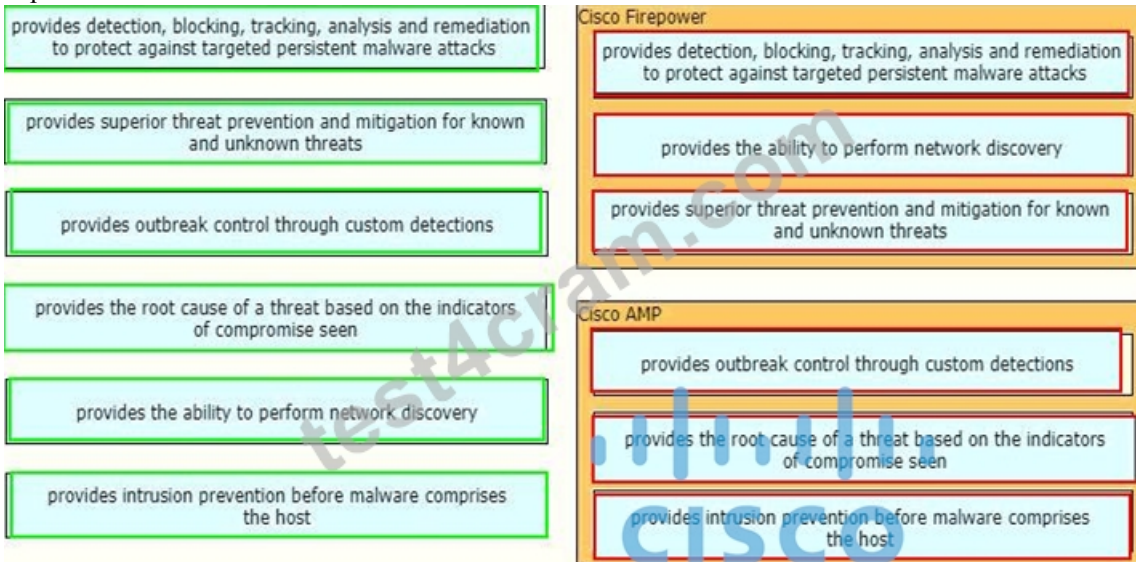

NEW QUESTION # 495

Drag and drop the capabilities of Cisco Firepower versus Cisco AMP from the left into the appropriate category on the right.

Answer:

Explanation:

NEW QUESTION # 496

Which command enables 802.1X globally on a Cisco switch?

- A. dot1x pae authenticator
- B. authentication port-control auto
- C. dot1x system-auth-control
- D. aaa new-model

Answer: C

NEW QUESTION # 497

Which method is used to deploy certificates and configure the supplicant on mobile devices to gain access to network resources?

- A. MAC authentication bypass
- B. Simple Certificate Enrollment Protocol
- C. Client provisioning

- **D. BYOD on boarding**

Answer: D

Explanation:

Explanation:

When supporting personal devices on a corporate network, you must protect network services and enterprise data by authenticating and authorizing users (employees, contractors, and guests) and their devices. Cisco ISE provides the tools you need to allow employees to securely use personal devices on a corporate network.

Guests can add their personal devices to the network by running the native supplicant provisioning (Network Setup Assistant), or by adding their devices to the My Devices portal.

Because native supplicant profiles are not available for all devices, users can use the My Devices portal to add these devices manually; or you can configure Bring Your Own Device (BYOD) rules to register these devices.

NEW QUESTION # 498

A Cisco AMP for Endpoints administrator configures a custom detection policy to add specific MD5 signatures. The configuration is created in the simple detection policy section, but it does not work. What is the reason for this failure?

- A. The APK must be uploaded for the application that the detection is intended
- B. The MD5 hash uploaded to the simple detection policy is in the incorrect format
- C. The administrator must upload the file instead of the hash for Cisco AMP to use.
- **D. Detections for MD5 signatures must be configured in the advanced custom detection policies**

Answer: D

NEW QUESTION # 499

.....
