新版1Z0-1109-25題庫上線，1Z0-1109-25題庫分享

希望成為擁有1Z0-1109-25認證的IT專業人士嗎？想減少獲得1Z0-1109-25認證的成本嗎？想通過所有的Oracle認證嗎？如果“是”，PDFExamDumps是考生最明智的選擇，為您提供涵蓋最新認證考試問題的最佳題庫學習資料。1Z0-1109-25題庫可以在您考前模擬真實的考試環境，也是最有效的考古題。利用Oracle的1Z0-1109-25考古題，您將達到您的目的，得到最佳的效果，給您帶來無限大的利益，在您以後的IT行業道路上可以走的更遠。

最新的 Oracle Cloud Infrastructure 1Z0-1109-25 免費考試真題 (Q44-Q49):

問題 #44

As a DevOps engineer working on an OCI project, you're setting up a deployment pipeline to automate your application deployments.

Which statement is false about deployment pipeline in OCI DevOps?

- A. You can add a Wait stage that adds a specified duration of delay in the pipeline.
- **B. Using deployment pipeline, you can deploy helm charts in OCI Function.**
- C. You can add an Approval stage that pauses the deployment for a specified duration for manual decision from the approver.
- D. You can add a Traffic Shift stage that routes the traffic between two environments.

答案: B

解題說明:

Helm charts are used to manage Kubernetes deployments, not OCI Functions. Helm charts are deployed to Kubernetes clusters, such as OCI Container Engine for Kubernetes (OKE), to manage containerized applications. OCI Functions are serverless and do not use Helm charts for deployment.

問題 #45

As a DevOps engineer working on managing clusters on the OCI platform for your organization, which statement is true about managing cluster add-ons in OCI OKE Cluster?

- A. When you disable a cluster add-on using the console, the add-on is completely removed from the cluster.
- B. When creating a new cluster, essential cluster add-ons are set to manually update.
- C. When enabling a cluster add-on, you cannot configure the add-on by specifying one or more key/value pairs to pass as arguments to the cluster add-on.
- **D. When creating a new cluster, essential cluster add-ons cannot be disabled.**

答案: D

解題說明:

Essential cluster add-ons are required for the basic functioning of the Kubernetes cluster and cannot be disabled during cluster creation. These add-ons provide necessary features such as core DNS, networking, and other critical functionalities for the cluster's operation.

問題 #46

What is the correct approach to upgrade an Oracle Container Engine for Kubernetes (OKE) Cluster to a newer version of Kubernetes?

- A. Upgrade the node pools one at a time, then once all node pools are upgraded, upgrade the control plane.
- **B. Upgrade the control plane, then upgrade the node pools.**
- C. Initiate the automated upgrade process using the OCI Console, CLI, or API.
- D. Initiate the control plane and node pool upgrades simultaneously.

答案: B

解題說明:

The correct approach to upgrade an Oracle Container Engine for Kubernetes (OKE) cluster involves first upgrading the Kubernetes control plane, followed by upgrading the node pools. The control plane must be upgraded first to ensure compatibility with newer versions of Kubernetes, as node pools rely on the control plane for orchestration and management.

After upgrading the control plane, each node pool is upgraded to match the new Kubernetes version. This phased approach ensures the cluster remains in a stable state during the upgrade.

問題 #47

You're using Oracle Cloud Infrastructure (OCI) DevOps service to automate your software releases to release features more frequently and with fewer errors. While deploying an update to production, one of your deployment stages failed. What action should you perform in your Deployment Pipeline?

- A. Automate back up and use the rerelease stage in the Deployment Pipeline.
- **B. Roll back the failed stage in the pipeline to the previous successful released version**
- C. Use OCI DevOps Trigger and Rerun tool to avoid downtime.
- D. Add Rescue and Trigger stages to automatically trigger the failed deployment.

答案: B

解題說明:

When a deployment stage fails in a OCI DevOps Deployment Pipeline, the recommended approach is to roll back to the previous successful version to ensure that the production environment remains in a stable state. This approach minimizes disruption and ensures that your system continues to function properly while the issue with the failed deployment is investigated and fixed.

問題 #48

As an engineer building and deploying applications using an OCI DevOps project, which two capabilities can help ensure the security and reliability of the code in the build and deployment pipelines? (Choose two.)

- A. Using version control tools like Git or SVN to track and manage changes in the codebase
- B. Using JIRA to track user stories and bug fixes in the development process
- C. Using third-party tools like Ansible, Terraform, or OverOps to analyze code for security defects or bugs in code quality
- **D. Using third-party tools like Sonatype, SonarQube, or OverOps to analyze code for security defects or bugs in code quality**
- **E. Using Application Dependency Management (ADM) to identify security weaknesses in software applications by checking their dependencies**

答案: D,E

解題說明:

Application Dependency Management (ADM) is a tool used to identify security weaknesses in software applications by analyzing their dependencies. Dependencies can often introduce vulnerabilities, and managing them properly is a critical part of ensuring application security.

Third-party tools like Sonatype and SonarQube can be used to analyze code for security defects or bugs in code quality. These tools help in identifying vulnerabilities, code smells, and other issues, which can improve the overall security and reliability of the code during the build process.

問題 #49

.....

PDFExamDumps提供的產品有很高的品質和可靠性。你可以先在網上免費下載部分PDFExamDumps提供的關於 Oracle 1Z0-1109-25 認證考試的練習題和答案作為嘗試。在你使用之後，相信你會很滿意我們的產品的。這麼好的一個能幫助你順利通過考試的產品，你還在猶豫什麼，快將PDFExamDumps的產品加入您的購物車吧。
