AVIXA CTS 考試大綱：

主題	簡介
主題 1	• Servicing AV Solutions: This section of the exam measures the skills of AV maintenance managers and focuses on the maintenance and repair of AV solutions. It involves supervising AV operations, conducting preventative maintenance, performing firmware and equipment upgrades, and troubleshooting and repairing AV systems to ensure they remain functional and efficient.
主題 2	• Supporting AV System Operation: This section of the exam measures the skills of AV support specialists and covers the ongoing support of AV systems. It includes troubleshooting issues, providing remote assistance, supporting live events, and offering in-room operation training to ensure smooth system operation.

主題 3	Creating AV Solutions: This section of the exam measures the skills of AV system designers and covers the process of creating audiovisual solutions. It includes conducting customer needs analysis, performing site surveys to assess environmental factors like lighting and acoustics, developing project scopes, and designing AV solutions with detailed drawings and materials lists.
主題 4	Implementing AV Solutions: This section of the exam measures the skills of AV system integrators and focuses on the implementation of AV solutions. It involves integrating AV systems, verifying their functionality, and managing the integration process, including training, documentation, and ensuring operational readiness.

問題 #254

Referring to this mix-minus system, in which zone should zone C's microphones be the LOUDEST? Select the answer by clicking anywhere within the correct zone.

答案：

解題說明：

Explanation:

Zone D

In a mix-minus audio system, the microphones within each zone are typically routed to the speakers in other zones, excluding the zone they are in. This setup helps to avoid feedback, as it minimizes the likelihood of a microphone picking up sound from a nearby speaker broadcasting the same audio. For Zone C's microphones to be the loudest, they should be directed to Zone D, which is adjacent to Zone C but not in the immediate vicinity of Zone C's microphones.

Mix-minus configurations are common in conference rooms and other multi-zone environments, where sound needs to be clear and localized without causing feedback.

CTS Technology Specialist Reference

The CTS guidelines on sound system design discuss mix-minus as an approach to achieve speech clarity and prevent feedback in multi-zone audio systems by broadcasting microphones to other zones rather than the one they are in.

問題 #255

For a design-bid (tender)-build project, the final step for determining the owner's costs for an AV system is

- A. having the owner approve the design.
- **B. ensuring the equipment specification is ready for bid.**
- C. performing a needs analysis.
- D. selecting an Integrator.

答案: B

解題說明:

For a design-bid (tender)-build project, the final step for determining the owner's costs for an AV system is ensuring the equipment specification is ready for bid. This step involves finalizing all equipment details, specifications, and requirements so that accurate bids can be obtained from potential contractors. Axis documentation indicates that having precise and detailed equipment specifications is critical for obtaining accurate project costs and selecting the best contractor for the job.

問題 #256

For ceiling speakers with a 90° effective coverage angle, a ceiling height of 3 m (10 ft), and an ear height of 1.2 m (4 ft), the spacing for a 50% coverage or edge-to-center layout is:

- **A. 3.6 m (12 ft)**
- B. 1.8 m (6 ft)

- C. 3.0 m (10 ft)
- D. 6.0 m (20 ft)

答案： A

解題說明：

The formula for calculating speaker spacing for 50% coverage (edge-to-center) is:

$$\text{Spacing} = 2 \times (H - h) \times \tan(\# / 2)$$

Where:

H = ceiling height = 3 m

h = ear height = 1.2 m

= coverage angle = 90°

Plugging in the values:

$$\text{Spacing} = 2 \times (3 - 1.2) \times \tan(45^\circ)$$

$$\text{Spacing} = 2 \times 1.8 \times 1$$

$$\text{Spacing} = 3.6 \text{ m}$$

Therefore, the correct spacing is 3.6 m (12 ft).

問題 #257

Which of the following is an example of PPE?

- A. fiberglass ladder
- B. company branded polo
- C. high visibility vest
- D. virtual reality headset

答案： C

解題說明：

A high visibility vest is an example of Personal Protective Equipment (PPE), which is worn to increase safety by making the wearer more visible on-site, particularly in low-visibility or high-traffic areas.

CTS Technology Specialist Reference

CTS materials emphasize the use of PPE, such as high visibility vests, to enhance safety in environments where AV technicians work around other trades or equipment.

問題 #258

Owner standards and design manuals are examples of which kind of documentation?

- A. vendor
- B. architectural
- C. existing conditions
- D. technical

答案： B

解題說明：

Owner standards and design manuals are examples of architectural documentation, as they provide guidelines for the physical design, layout, and aesthetics of a space. These documents influence AV design by dictating structural and design requirements.

CTS Technology Specialist Reference

The CTS study materials classify owner standards and design manuals as part of architectural documentation, which provides foundational design parameters for AV integration.
