AZ-104 Reliable Exam Syllabus | AZ-104 Training Material

It is a truth universally acknowledged that the exam is not easy but the related AZ-104 certification is of great significance for workers in this field so that many workers have to meet the challenge, I am glad to tell you that our company aims to help you to pass the AZ-104 examination as well as gaining the related certification in a more efficient and simpler way. During nearly ten years, our AZ-104 Exam Questions have met with warm reception and quick sale in the international market. Our AZ-104 study materials are distinctly superior in the whole field.

Microsoft Azure Administrator Sample Questions (Q244-Q249):

NEW QUESTION # 244

You plan to deploy an Azure container instance by using the following Azure Resource Manager template.

Use the drop-down menus to select the answer choice that completes each statement based on the information presented in the template.

Answer:

Explanation:

Explanation

Box 1: can connect to the container from any device

In the policy "osType": "window" refer that it will create a container in a container group that runs Windows but it won't block access depending on device type.

Box 2: the container will restart automatically

Docker provides restart policies to control whether your containers start automatically when they exit, or when Docker restarts.

Restart policies ensure that linked containers are started in the correct order. Docker recommends that you use restart policies, and avoid using process managers to start containers.

on-failure : Restart the container if it exits due to an error, which manifests as a non-zero exit code.

As the flag is mentioned as "on-failure" in the policy, so it will restart automatically

Reference:

<https://docs.microsoft.com/en-us/cli/azure/container?view=azure-cli-latest>

<https://docs.docker.com/config/containers/start-containers-automatically/>

NEW QUESTION # 245

Your network contains an on-premises Active Directory forest named contoso.com that contains two domains named contoso.com and east.contoso.com

The forest contains the users shown in the following table.

You plan to sync east.contoso.com to an Azure Active Directory (Azure AD) tenant by using Azure AD Connect.

You need to select an account for Azure AD Connect to use to connect to the forest.

Which account should you select?

- A. User2
- **B. User4**
- C. User3
- D. User1

Answer: B

Explanation:

Explanation

It is no longer supported to use an enterprise admin or a domain admin account as the AD DS Connector account.

<https://docs.microsoft.com/en-us/azure/active-directory/hybrid/reference-connect-accounts-permissions>

NEW QUESTION # 246

You have an Azure subscription that contains an Azure Storage account storageaccount1.

You export storage account as an Azure Resource Manager template. The template contains the following sections.

For each of the following statements, select Yes if the statement is true. Otherwise, select No.

NOTE: Each correct selection is worth one point.

Answer:

Explanation:

Explanation

Explanation

NEW QUESTION # 247

You plan to deploy five virtual machines to a virtual network subnet.

Each virtual machine will have a public IP address and a private IP address.

Each virtual machine requires the same inbound and outbound security rules.

What is the minimum number of network interfaces and network security groups that you require? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

Answer:

Explanation:

Explanation

Box 1: 5

A public and a private IP address can be assigned to a single network interface.

Box 2: 1

You can associate zero, or one, network security group to each virtual network subnet and network interface in a virtual machine. The same network security group can be associated to as many subnets and network interfaces as you choose.

Reference:

<https://docs.microsoft.com/en-us/azure/virtual-network/virtual-network-network-interface-addresses>

NEW QUESTION # 248

You have the Azure virtual networks shown in the following table.

To which virtual networks can you establish a peering connection from VNet1?

- A. VNet2, VNet3, and VNet4
- B. VNet2 and VNet3 only
- C. VNet2 only
- D. VNet3 and VNet4 only

Answer: D

Explanation:

References:

<https://docs.microsoft.com/en-us/azure/virtual-network/tutorial-connect-virtual-networks-portal> You can connect virtual networks to each other with virtual network peering. These virtual networks can be in the same region or different regions (also known as Global VNet peering). Once virtual networks are peered, resources in both virtual networks are able to communicate with each other, with the same latency and bandwidth as if the resources were in the same virtual network.

Global VNet Peering is now generally available in all Azure public regions, excluding the China, Germany, and Azure Government regions.

The address space is the most critical configuration for a VNet in Azure. This is the IP range for the entire network that will be divided into subnets. The address space can almost be any IP range that you wish (public or private). You can add multiple address spaces to a VNet. To ensure this VNet can be connected to other networks, the address space should never overlap with any other networks in your environment. If a VNet has an address space that overlaps with another Azure VNet or on-premises network, the networks cannot be connected, as the routing of traffic will not work properly.
