### 問題 #285

Which two of these Check Point Protocols are used by ?

- A. ELA and CPLOG
- B. ELA and CPD
- C. FWD and CPLOG
- **D. FWD and LEA**

答案：D

解題說明：

The two Check Point Protocols that are used by are FWD and LEA567. FWD is the Firewall Daemon that handles communication between different Check Point components, such as Security Management Server, Security Gateway, SmartConsole, etc. LEA is the Log Export API that allows external applications to retrieve logs from the Security Gateway or Security Management Server. Therefore, the correct answer is B. FWD and LEA. Border Gateway Protocol - Check Point Software, Check Point IPS Datasheet, List of valid protocols for services? - Check Point CheckMates

### 問題 #286

You have discovered suspicious activity in your network. What is the BEST immediate action to take?

- A. Contact ISP to block the traffic.
- **B. Create a suspicious action rule to block that traffic.**
- C. Create a policy rule to block the traffic.
- D. Wait until traffic has been identified before making any changes.

答案： B

解題說明：

The BEST immediate action to take when you have discovered suspicious activity in your network is to create a suspicious action rule to block that traffic. A suspicious action rule is a special type of rule that is triggered when a predefined condition is met, such as a malicious file download, a ransomware attack, or a data exfiltration attempt<sup>13</sup>. A suspicious action rule can block the traffic, quarantine the source, or send an alert to the administrator. Creating a policy rule to block the traffic may not be effective if the traffic does not match the rule criteria or if the policy installation is delayed. Waiting until traffic has been identified before making any changes may allow the threat to spread or cause more damage. Contacting ISP to block the traffic may not be feasible or timely, and may also affect legitimate traffic. #### 問題 #287

Identity Awareness allows easy configuration for network access and auditing based on what three items?

- A. Client machine IP address.
- B. Log server IP address.
- **C. Network location, the identity of a user and the identity of a machine.**
- D. Gateway proxy IP address.

答案： C

解題說明：

Identity Awareness is a blade that enables administrators to define access rules based on the identity of users and machines, rather than just IP addresses. Identity Awareness allows easy configuration for network access and auditing based on three items: network location, the identity of a user, and the identity of a machine. Network location refers to the source or destination network segment of the traffic. The identity of a user refers to the username or group membership of the user who initiates or receives the traffic. The identity of a machine refers to the hostname or certificate of the machine that initiates or receives the traffic. [Check Point R81 Identity Awareness Administration Guide]

#### 問題 #288

What are the steps to configure the HTTPS Inspection Policy?

- **A. Go to Manage & Settings > Blades > HTTPS Inspection > Policy**
- B. Go to Application & URL filtering blade > Https Inspection > Policy
- C. Go to Application & URL filtering blade > Advanced > Https Inspection > Policy
- D. Go to Manage & Settings > Blades > HTTPS Inspection > Configure in SmartDashboard

答案： A

解題說明：

The steps to configure the HTTPS Inspection Policy are as follows<sup>34</sup>:

Go to Manage & Settings > Blades > HTTPS Inspection > Policy.

Click on New HTTPS Inspection Rule or select an existing rule and click on Edit Rule.

Define the Source, Destination, and Action for the rule. The action can be either Inspect, Bypass, or Ask.

Click on OK and then on Install Policy to apply the changes. HTTPS Inspection R81 Administration Guide, Check Point CCSA - R81: Practice Test & Explanation

#### 問題 #289

Which of the following is used to initially create trust between a Gateway and Security Management Server?

- A. Internal Certificate Authority
- **B. One-time Password**

- C. Token
- D. Certificate

答案：B

解題說明：

A one-time password is used to initially create trust between a Gateway and Security Management Server. The administrator generates a one-time password from SmartConsole and enters it on the gateway command line interface using the cpconfig command. This establishes a Secure Internal Communication (SIC) between the gateway and the server. The other options are not used for this purpose.
