## TDA-C01 Latest Dumps & TDA-C01 Dumps Torrent & TDA-C01 Valid Dumps

As you can see on our website, there are versions of the PDF, Software and APP online. PDF version of our TDA-C01 study materials- it is legible to read and remember, and support customers' printing request. Software version of our TDA-C01 exam questions-It support simulation test system and times of setup has no restriction. Remember this version support Windows system users only. App online version of TDA-C01 Practice Engine -Be suitable to all kinds of equipment or digital devices.

Achieving the Tableau TDA-C01 certification demonstrates a candidate's ability to use Tableau software to solve complex data problems and effectively communicate insights from data. Tableau Certified Data Analyst certification is recognized by top companies and organizations worldwide, making it a valuable asset for professionals looking to advance their careers in the field of data analysis. With the increasing demand for skilled data analysts, the Tableau TDA-C01 Certification can give candidates a competitive edge in the job market and open up new career opportunities.

## Tableau Certified Data Analyst Sample Questions (Q68-Q73):

### NEW QUESTION # 68

You have a data source that contains 20 tables.

You want the tables to be organized within the Data pane based on the type of data contained within the tables.

What should you use?

- A. Sets

- B. Folders
- C. Groups
- D. Hierarchies

**Answer: B**

Explanation:

To organize the tables in the Data pane based on the type of data contained within the tables, you should use folders. Folders are a way to manually group fields, parameters, sets, or tables in the Data pane according to your preference. You can create folders by right-clicking on the fields or tables you want to group and selecting Folders > Create Folder. You can also drag and drop fields or tables into existing folders. You can name the folders according to the type of data they contain, such as sales, customer, product, etc. Folders can help you find and access the fields or tables you need more easily and efficiently. Tableau Certified Data Analyst Study Guide

**NEW QUESTION # 69**

A Data Analyst has a data source that contains data for every city in the United States. The following is a sample of the data.

City	State	Country	Population
Miami	Florida	United States	454,279
New York	New York	United States	8,419,000
Seattle	Washington	United States	724,905
Chicago	Illinois	United States	2,710,000
...	...	...	...

The analyst needs to use the City dimension to create a dynamic filter that shows the cities that have a population greater than 1 million.

Which type of filter should the analyst use?

- A. Special
- B. Top
- C. Range
- D. Condition

**Answer: D**

**NEW QUESTION # 70**

You have a data source that contains data for every city in the United States. The following is a sample of the data.

You need to use the City dimension to create a dynamic filter that shows the cities that have a population greater than one million.

Which type of filter should you use?

- A. Top filter
- B. Condition filter
- C. Wildcard filter
- D. General filter

**Answer: B**

Explanation:

To use the City dimension to create a dynamic filter that shows the cities that have a population greater than one million, you should use a condition filter. A condition filter is a type of filter that shows only the values that meet a specified condition based on a measure or a calculation. You can create a condition filter by dragging a dimension to the Filters shelf and selecting Condition from the dialog box. Then you can enter a formula or choose an option that defines your condition.

In this case, you want to create a condition filter based on Population, which is a measure. You can drag City to the Filters shelf and select Condition from the dialog box. Then you can choose By field from the tab and select Population > Sum > Greater than > 1000000 from the drop-down lists. This will create a condition filter that shows only the cities that have a sum of population greater than one million.

The other options are not correct for this scenario. A general filter is not a specific type of filter, but a term that refers to any type of filter in Tableau. A wildcard filter is a type of filter that shows only the values that match a specified pattern or string, such as "New\*" or "\*ton". A top filter is a type of filter that shows only the top or bottom N values of a measure or dimension based on a ranking or an aggregation. References:
