The Juniper JN0-351 practice test by UpdateDumps can be accessed online on different web browsers like Chrome, IE, Firefox, Opera, and Safari without any plugins. You also have the flexibility to open the pdf file of the Enterprise Routing and Switching, Specialist (JNCIS-ENT) JN0-351 Practice Test on mobile devices and tablets. The Juniper JN0-351 pdf dumps version allows you to print the Juniper JN0-351 exam questions easily and access it everywhere.

Juniper JN0-351 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none">BGP: This topic focuses on the operational and conceptual elements of BGP, a cornerstone in enterprise networks.
Topic 2	<ul style="list-style-type: none">Tunnels: The fundamentals of IP tunneling are emphasized, highlighting their requirements and functionalities. Mastery in configuring, monitoring, and troubleshooting tunnels equips professionals to meet the demands of the JN0-351 exam.

Topic 3	<ul style="list-style-type: none"> • OSPF: The concepts and operational details of OSPF are explored, providing tools for routing efficiency. Configuration and troubleshooting mastery ensure readiness for both the exam and complex enterprise environments.
Topic 4	<ul style="list-style-type: none"> • Layer 2 Switching or VLANs: This topic deepens the understanding of Layer 2 switching operations within the Junos OS, including VLAN concepts and benefits. Experienced networking professionals gain insights into configuration, monitoring, and troubleshooting techniques essential for network segmentation and efficiency.
Topic 5	<ul style="list-style-type: none"> • Spanning Tree: Networking professionals explore the principles and advantages of the Spanning Tree Protocol (STP) to ensure loop-free topologies in Layer 2 networks.
Topic 6	<ul style="list-style-type: none"> • High Availability: This topic covers the importance and application of high availability within Junos OS environments. Knowledge in configuring and managing these components is critical for ensuring robust and uninterrupted network operations, aligning with exam expectations.
Topic 7	<ul style="list-style-type: none"> • IS-IS: Aspiring Juniper networking professionals enhance their understanding of IS-IS routing protocols. This topic equips candidates with the knowledge to configure and monitor IS-IS systems, addressing specific exam challenges and practical applications.
Topic 8	<ul style="list-style-type: none"> • Protocol Independent Routing: An essential domain for understanding routing components outside protocol dependencies, this topic enhances expertise in configuring, monitoring, and troubleshooting critical elements.

Get Success in Juniper JN0-351 Exam Dumps with Good Scores

In cyber age, it's essential to pass the JN0-351 exam to prove ability especially for lots of office workers. Our company, with a history of ten years, has been committed to making efforts on developing JN0-351 exam guides in this field. Since the establishment, we have won wonderful feedback from customers and ceaseless business and continuously worked on developing our JN0-351 Exam prepare to make it more received by the public. Moreover, our understanding of the importance of information technology has reached a new level. Efforts have been made in our experts to help our candidates successfully pass JN0-351 exam. Seldom dose the e-market have an authorized study materials for reference.

Juniper Enterprise Routing and Switching, Specialist (JNCIS-ENT) Sample Questions (Q102-Q107):

NEW QUESTION # 102

Two routers share the same highest priority and start time.

- A. The router with the highest MAC address become the DR
- B. The routers perform another DR election.
- C. In this situation, what is evaluated next when determining the designated router? The router with the lowest router ID become the DR.
- D. The router with the highest router ID becomes the DR

Answer: D

Explanation:

According to the OSPF protocol, the designated router (DR) is the router that acts as the focal point for exchanging routing information on a multi-access network segment, such as a LAN1. The DR election process is based on the following criteria, in order of precedence1:

The router with the highest OSPF priority becomes the DR. The default priority is 1, and a priority of 0 means the router will not participate in the election.

If there is a tie in priority, the router with the highest router ID becomes the DR. The router ID is a 32-bit number that uniquely identifies a router in an OSPF domain. It can be manually configured or automatically derived from the highest IP address of a

loopback interface or a physical interface.

If there is a tie in router ID, the router that was first to become an OSPF neighbor becomes the DR.

In your scenario, two routers share the same highest priority and start time. This means that they have equal chances of becoming the DR based on the first and third criteria. Therefore, the second criterion will be used to break the tie, which is the router ID. The router with the highest router ID will become the DR, and the other router will become the backup designated router (BDR), which is ready to take over the role of DR if it fails.

NEW QUESTION # 103

Which statement is correct about IP-IP tunnels?

- A. IP-IP tunnels only support encapsulating IP traffic.
- B. There are 24 bytes of overhead with IP-IP encapsulation.
- C. The TTL in the inner packet is decremented during transit to the tunnel endpoint.
- D. IP-IP tunnels only support encapsulating non-IP traffic.

Answer: C

Explanation:

IP-IP tunnels encapsulate IP packets within other IP packets, allowing them to traverse networks that wouldn't normally support the original IP packets. This encapsulation involves the TTL (Time-to-Live) of the inner packet being decremented as it traverses through the tunnel towards its endpoint.

NEW QUESTION # 104

What are two reasons for creating multiple areas in OSPF? (Choose two.)

- A. to increase the size of the LSDB
- B. to reduce the convergence time
- C. to reduce LSA flooding across the network
- D. to increase the number of adjacencies in the backbone

Answer: B,C

Explanation:

Option A is correct. Creating multiple areas in OSPF can help to reduce the convergence time. This is because changes in one area do not affect other areas, so fewer routers need to run the SPF algorithm in response to a change.

Option D is correct. Creating multiple areas in OSPF can help to reduce Link State Advertisement (LSA) flooding across the network. This is because LSAs are not flooded out of their area of origin.

NEW QUESTION # 105

You are asked to connect an IP phone and a user computer using the same interface on an EX Series switch.

The traffic from the computer does not use a VLAN tag, whereas the traffic from the IP phone uses a VLAN tag.

Which feature enables the interface to receive both types of traffic?

- A. native VLAN
- B. voice VLAN
- C. DHCP snooping
- D. MAC limiting

Answer: B

Explanation:

Explanation

The feature that enables an interface on an EX Series switch to receive both untagged traffic (from the computer) and tagged traffic (from the IP phone) is the voice VLAN.

The voice VLAN feature in EX-series switches enables access ports to accept both data (untagged) and voice (tagged) traffic and separate that traffic into different VLANs. This allows the switch to differentiate between voice and data traffic, ensuring that voice traffic can be treated with a higher priority. Therefore, option B is correct.

NEW QUESTION # 106

What is a purpose of using a spanning tree protocol?

- A. to route IP packets
- B. to look up MAC addresses
- C. to tunnel Ethernet frames
- D. to eliminate broadcast storms

Answer: D

Explanation:

A broadcast storm is a network condition where a large number of broadcast packets are sent and received by multiple devices, causing congestion and performance degradation¹. A broadcast storm can occur when there are loops in the network topology, meaning that there are multiple paths between two devices².

A spanning tree protocol is a network protocol that prevents loops from being formed when switches or bridges are interconnected via multiple paths. It does this by creating a logical tree structure that spans all the devices in the network, and disabling or blocking the links that are not part of the tree, leaving a single active path between any two devices³.

By eliminating loops, a spanning tree protocol also eliminates broadcast storms, as broadcast packets will not be forwarded endlessly along the looped paths. Instead, broadcast packets will be sent only along the tree structure, reaching each device once and avoiding congestion³.

NEW QUESTION # 107

.....

We offer you free demo for JN0-351 pdf dumps. You can check out the questions quality and usability of our training material before you buy. Juniper JN0-351 questions are written to the highest standards of technical accuracy with accurate answers. If you prepare for your exams using UpdateDumps JN0-351 practice torrent, it is easy to succeed for your certification in the first attempt. Besides, we offer the money refund policy, in case of failure, you can ask for full refund.
