## MCD-Level-1최고품질 인증시험공부자료 - MCD-Level-1유효한 공부자료

요즘같이 시간인즉 금이라는 시대에, 우리 Fast2test선택으로MuleSoft MCD-Level-1인증시험응시는 아주 좋은 일입니다. 우리는 100%시험패스를 보장하고 또 일년무료 업데이트서비스를 제공합니다. 그리고 시험에서 떨어지셨다고 하시면 우리는 덤프비용전액 환불을 약속 드립니다.

MuleSoft MCD-Level-1: MuleSoft Certified Developer - Level 1 (Mule 4)은 Mule 4를 사용하여 MuleSoft 애플리케이션을 설계, 구축, 테스트 및 배포하는 MuleSoft 개발자의 기술을 인증하는 전 세계적으로 인정받는 자격증입니다. 이 시험은 산업 표준 및 모범 사례에 기반하며 조직이 숙련된 MuleSoft 개발자를 식별하고 고용하는 데 도움이 됩니다. 또한 이 자격증은 개발자가 전문가들의 MuleSoft 커뮤니티에 액세스하여 다른 사람들과 지식을 배우고 공유할 수 있

도록 지원합니다. 시험 준비에는 온라인 코스, 교육 세션, 실습 및 학습 자료의 조합이 필요하며, 개발자는 MuleSoft 전문가 커뮤니티에 가입하여 도움과 지원을 받을 수도 있습니다.

## 최신 MuleSoft Certified Developer MCD-Level-1 무료 샘플문제 (Q97-Q102):

### 질문 # 97

Refer to the exhibits.

A web client sends a GET request to the HTTP Listener.

What response message is returned to the web client?

□

- A. ""
- B. "Start"
- C. "String is not blank"
- D. "End"

정답: D

설명:

1. Set Payload "Start"
2. 'Is Blank String' Creates an Error object with #[error.description] ="String is not blank"
3. Default Error Handler catches and Propagates error
4. 'On Error Propagate' is 'RED IN RED OUT'. It Returns Status Code : 500 & #[error.description]

----- Correct

answer is String is not blank. Because validation component will throw an error as payload is not blank.

□

### 질문 # 98

Refer to the exhibits.

□

In the Choice router, the When expression for the domesticShipping route is set to "[payload = 'FR']". What is logged after the Choice router completes?

- A. A DataWeave syntax error
- B. The result of the domesticShipping flow
- C. The result of the internationalShipping flow
- D. A string with value "FR"

정답: A

### 질문 # 99

What MuleSoft API-led connectivity layer is intended to expose part of a backend database without business logic?

- A. System layer
- B. Experience layer
- C. Process layer
- D. Data layer

정답: A

설명:

Correct answer is System layer

System APIs provide a means for insulating the data consumers from the complexity or changes to the underlying backend systems. MuleSoft recommends three-layered approach to API-led connectivity, highlighting the three layers:

\* System APIs

\* Process APIs

\* Experience APIs

System APIs are the core systems of record underlying core systems of record (e.g. ERPs, key customer and billing systems, databases, etc.). Process APIs allow you to define a common process which the organization can share, and these APIs perform specific functions, provide access to non-central data, and may be built by either Central IT or Line of Business IT. And finally, the

Experience APIs are the means by which data can be reconfigured so that it is most easily consumed by its intended audience, all from a common data source.

The three-layered structure allows for a seamless flow of data from systems of record to new experiences, and allows for reusability of assets rather than point to point connections. This approach provides a distributed and tailored approach to architecture, greater flexibility through loose coupling, and deeper operational visibility into what is being built.

#### 질문 # 100

Refer to the exhibits.

The main flow contains a Flow Reference to the child flow.

A web client sends a GET request to the main flow's HTTP Listener that includes a make query parameter.

What values are accessible in the child flow?

- A. payload
- B. payload  
model var
- C. payload  
make query param
- D. payload  
make query param model var

정답: D

#### 질문 # 101

A Database On Table Row listener retrieves data from a CUSTOMER table that contains a primary key userjd column and an increasing kxjin\_date\_time column. Neither column allows duplicate values.

How should the listener be configured so it retrieves each row at most one time?

- A. Set the watermark column to the bgin\_date\_time column
- B. Set the target value to the last retrieved login\_date\_time value
- C. Set the target value to the last retrieved user\_jd value
- D. Set the watermark column to the user\_Id column

정답: A

설명:

\* Watermark allows the poll scope to poll for new resources instead of getting the same resource over and over again.

\* The database table must be ordered so that the "watermark functionality" can move effectively in the ordered list. Watermark stores the current/last picked up "record id."

\* If the Mule application is shut down, it will store the last picked up "record id" in the Java Object Store and the data will continue to exist in the file. This watermark functionality is valuable and enables developers to have increased transparency.

\* Developers do not need to create code to handle caching; it is all configurable!

\* There are two columns and both are unique but user\_id can't guaranty sequence whereas date\_time will always be in increasing order and table content can easily be ordered on the basis of last processed date\_time.

So correct answer is: Set the watermark column to the date\_time column
