OmniStudio-Developer Training Questions & Valid OmniStudio-Developer Exam Labs

With our OmniStudio-Developer practice test software, you can simply assess yourself by going through the OmniStudio-Developer practice tests. We highly recommend going through the OmniStudio-Developer answers multiple times so you can assess your preparation for the Salesforce Certified OmniStudio Developer. Make sure that you are preparing yourself for the OmniStudio-Developer test with our practice test software as it will help you get a clear idea of the real OmniStudio-Developer exam scenario. By passing the exams multiple times on practice test software, you will be able to pass the real OmniStudio-Developer test in the first attempt.

Salesforce OmniStudio-Developer Certification Exam is a highly sought-after credential for individuals looking to demonstrate their expertise in Salesforce's powerful suite of tools for automating business processes. Salesforce Certified OmniStudio Developer certification is designed for developers who specialize in the Salesforce platform and are looking to expand their skills to include the OmniStudio suite of automation tools.

Salesforce Certified OmniStudio Developer Sample Questions (Q79-Q84):

NEW QUESTION # 79
A developer needs to use the COUNTIF function to process data entered by the user in an OmniScript.
The output of the function needs to be displayed to the user immediately in the current step.
Based on best practice, which element should the developer use this function in?

- A. Formula element
- B. Set Values element
- C. Range element

Answer: A

Explanation:
In OmniScripts, if you need to apply a function (like COUNTIF) to dynamic data and show the result immediately, the Formula element is the correct choice.
* B. Formula element - The Formula element supports real-time calculation using OmniStudio expression functions (like COUNTIF, SUM, etc.) and updates values instantly on the screen without the need for server calls.
Incorrect Options:
* A. Set Values element is used to set static or conditional values but doesn't support formula evaluation.
* C. Range element is used for value comparisons and conditions, not for calculations.
:
Salesforce OmniStudio Developer Guide # OmniScript Formula Element

NEW QUESTION # 80
A developer writes an OmniScript that includes a DataRaptor that updates the Account statue based on information provided from the OmniScript. The information must be updated only if the Account record already exists. Otherwise, a new account must be created.
How should the developer accomplish this task?

- A. Check the Upset key and is required for Upsert checkboxes on the Account id field
- B. Populate the Lookup object and Lookup fields
- C. Check Overwrite Target for all Null input checkbox on the Account id field
- D. Check the Upsert key checkbox on the Account Status field

Answer: A

NEW QUESTION # 81
A developer is building a DataRaptor Load for an Integrate Procedure used in an OmniScript.
Based on best practices, how should the developer configure the Input JSON?

- A. Build the Input JSON node by node m an editor.
- B. Build the Input JSON node by node m the DataRaptor Designer.
- C. Copy the Input JSON from the DataRaptor Acton Debug node.
- D. Copy the Input JSON from the OmniScript {Data} modal.

Answer: D

Explanation:
Explanation
The best practice for configuring the Input JSON for a DataRaptor Load is to copy the Input JSON from the OmniScript {Data} modal. This ensures that the Input JSON matches the data structure and format of the OmniScript data. The DataRaptor Action Debug node may not have the same data as the OmniScript data, and building the Input JSON node by node in an editor or in the DataRaptor Designer may introduce errors or inconsistencies.

NEW QUESTION # 82
Refer to the exhibit below. A developer has configured an integration Procedure element with Additional input.

Alternatively, how could the developer configure SEND/RESPONSE TRNSFORMATION to send exactly the same data? Assume the developer has un-checked Send Only Additional input.

- A. ☐
- B. ☐
- C. ☐
- D. ☐

Answer: C

Explanation:
Explanation
The Send JSON Path syntax for accessing an element from an Integration Procedure structure is BlockName.ElementName. In this case, the BlockName is BlockX and the ElementName is ActionZ. The colon (:) is used to separate the input and output parameters, not the block and element names. The order of the block and element names should follow the hierarchy of the structure, from top to bottom. The Additional input parameter is not needed in this case, as it is already included in the Send JSON Path.

NEW QUESTION # 83
A developer creates an Integration Procedure with a Set Values and a DataRaptor Extract Action that requires AccountId as a key. When the developer previews the Integration Procedure, thedeveloper enters the AccountId correctly and execute the Preview. The developer sees the data extract by the DataRaptor in the Debug Log, but the response is empty.
What is the likely cause of this issue?

- A. The Response cannot be previewed directly.
- B. A Response Action was not added to the integration Procedure.
- C. The AccountId used for the preview is invalid.
- D. The DataRaptor Action did not have the add response Ro Response JSON property set to true.

Answer: B

Explanation:
According to the OmniStudio Developer Guide, "To return a response from an Integration Procedure, add a Response action as the last action in your Integration Procedure." Therefore, the correct answer is C.
