## Actual HashiCorp Terraform-Associate-003 Test Answers, Terraform-Associate-003 Dumps Download

About choosing the perfect Terraform-Associate-003 study material, it may be reflected in matters like quality, prices, after-sale services and so on. Terraform-Associate-003 exam simulation is accumulation of knowledge about the exam strictly based on the syllabus of the exam. They give users access to information and exam, offering simulative testing environment when you participate it like in the classroom. And if you are afraid of the lack experience of the exam, our Terraform-Associate-003 Practice Engine will be

your good choice.

## HashiCorp Certified: Terraform Associate (003) (HCTA0-003) Sample Questions (Q149-Q154):

### NEW QUESTION # 149

If you manually destroy infrastructure, what is the best practice reflecting this change in Terraform?

- A. Run terraform import
- B. It will happen automatically
- C. Run terraform refresh
- D. Manually update the state file

**Answer: B**

Explanation:

If you manually destroy infrastructure, Terraform will automatically detect the change and update the state file during the next plan or apply. Terraform compares the current state of the infrastructure with the desired state in the configuration and generates a plan to reconcile the differences. If a resource is missing from the infrastructure but still exists in the state file, Terraform will attempt to recreate it. If a resource is present in the infrastructure but not in the state file, Terraform will ignore it unless you use the terraform import command to bring it under Terraform's management. Reference = [Terraform State]

### NEW QUESTION # 150

\_\_\_\_\_ backends support state locking.

- A. Some
- B. Only local
- C. All
- D. No

**Answer: A**

Explanation:

Some backends support state locking, which prevents other users from modifying the state file while a Terraform operation is in progress. This prevents conflicts and data loss. Not all backends support this feature, and you can check the documentation for each backend type to see if it does.

### NEW QUESTION # 151

When does Terraform create the .terraform.lock.hcl file?

- A. After your first terraform init
- B. When you enable state locking
- C. After your first terraform apply
- D. After your first terraform plan

**Answer: A**

Explanation:

Terraform creates the .terraform.lock.hcl file after the first terraform init command. This lock file ensures that the dependencies for your project are consistent across different runs by locking the versions of the providers and modules used.

### NEW QUESTION # 152

What does this code do?

- A. Requires any version of the AWS provider  $\geq 3.0$  and  $<4.0$
- B. Requires any version of the AWS provider  $\geq 3.0$
- C. Requires any version of the AWS provider  $\geq 3.0$  major release. like 4.1
- D. Requires any version of the AWS provider  $> 3.0$

**Answer: A**

Explanation:

This is what this code does, by using the pessimistic constraint operator ( $\sim>$ ), which specifies an acceptable range of versions for a provider or module.

### NEW QUESTION # 153

Before you can use a remote backend, you must first execute terra-form init.

- A. True
- B. False

**Answer: A**

Explanation:

Before using a remote backend in Terraform, it is mandatory to run terraform init. This command initializes a Terraform working directory, which includes configuring the backend. If a remote backend is specified, terraform init will set up the working directory to use it, including copying any existing state to the remote backend if necessary.

Reference = This principle is a fundamental part of working with Terraform and its backends, as outlined in general Terraform documentation and best practices. The specific HashiCorp Terraform Associate (003) study materials in the provided files did not include direct references to this information.

### NEW QUESTION # 154

.....

It is convenient for our consumers to check HashiCorp Terraform-Associate-003 exam questions free of charge before purchasing the HashiCorp Terraform-Associate-003 practice exam. HashiCorp is an excellent platform where you get relevant, credible, and unique HashiCorp Terraform-Associate-003 Exam Dumps designed according to the specified pattern, material, and format as suggested by the HashiCorp Terraform-Associate-003 exam.
