

1z0-076 Interactive Course Fantastic Questions Pool Only at Prep4King

P.S. Free 2026 Oracle 1z0-076 dumps are available on Google Drive shared by Prep4King: <https://drive.google.com/open?id=1KV-2caepBPshHMcflzdmrfdiEY0dABp>

Good opportunities are always for those who prepare themselves well. You should update yourself when you are still young. Our 1z0-076 study materials might be a good choice for you. The contents of our 1z0-076 learning braindumps are the most suitable for busy people. And we are professional in this field for over ten years. Our 1z0-076 Exam Questions are carefully compiled by the veteran experts who know every detail of the content as well as the displays. Just have a try and you will love them!

Oracle 1z0-076 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none">• Oracle Data Guard Basics: This topic covers the essential architecture and concepts of Oracle Data Guard. It includes sub-topics such as the physical and logical standby database comparison, benefits of Data Guard, and its integration with multi-tenant databases.

Topic 2	<ul style="list-style-type: none"> Managing Oracle Net Services in a Data Guard Environment: The section focuses on Oracle Net Services and its role in Data Guard networking setup.
Topic 3	<ul style="list-style-type: none"> Enhanced Client Connectivity in a Data Guard Environment: This topic focuses on enhancing client connectivity in a Data Guard setup and implementing failover procedures for seamless client redirection. It also covers application continuity to ensure uninterrupted operations during role transitions.
Topic 4	<ul style="list-style-type: none"> Patching and Upgrading Databases in a Data Guard Configuration: This section provides guidance on patching and upgrading databases in a Data Guard environment, along with performance optimization techniques and monitoring considerations.
Topic 5	<ul style="list-style-type: none"> Oracle Data Guard Broker Basics: An overview of the Data Guard broker, its architecture, components, benefits, and configurations, is provided here. It serves as an introduction to the tool used for managing Data Guard configurations.
Topic 6	<ul style="list-style-type: none"> Monitoring a Data Guard Broker Configuration: The topic covers the use of Enterprise Manager and DGMGRL to monitor Data Guard configurations and explains the various data protection modes available.
Topic 7	<ul style="list-style-type: none"> Performing Role Transitions: Here, the concept of database roles is explained, along with the steps for performing switchovers, failovers, and maintaining physical standby sessions during role transitions.
Topic 8	<ul style="list-style-type: none"> Backup and Recovery Considerations in an Oracle Data Guard Configuration: In this topic, Backup and recovery procedures in a Data Guard configuration are discussed, including RMAN backups, offloading to physical standby, and network-based recovery.
Topic 9	<ul style="list-style-type: none"> Creating a Data Guard Broker Configuration: This section delves into the practical aspects of creating and managing a Data Guard broker configuration, including command-line and Enterprise Manager approaches.

2026 Latest 1z0-076 Interactive Course | 100% Free New Oracle Database 19c: Data Guard Administration Mock Test

Prep4King experts have also developed Oracle Database 19c: Data Guard Administration (1z0-076) test simulation software for you to assess and improve yourself. This is especially useful for intensive preparation and revision. It will provide you with an Oracle Database 19c: Data Guard Administration (1z0-076) exam environment and will give you real exam Oracle 1z0-076 questions.

Oracle Database 19c: Data Guard Administration Sample Questions (Q12-Q17):

NEW QUESTION # 12

Which THREE statements are TRUE about Global Sequences when connected to a physical standby database with Real-Time Query enabled?

- A. If the CACHE option is set then the size of the cache must be at least 100.
- B. Their creation requires that a LOG archive_dest_n parameter be defined in the standby that points back to the primary.
- C. Their usage may have a performance impact on the physical standby database if the CACHE size is too small.
- D. They must have the NOORDEK and CACHE options set.
- E. Their usage will always have a performance impact on the primary database.

Answer: C,D,E

Explanation:

Global Sequences are Oracle sequences that generate unique values across multiple instances in an Oracle RAC or a Data Guard configuration. Regarding their behavior and performance when connected to a physical standby database with Real-Time Query enabled:

A: The usage of Global Sequences can indeed have a performance impact on the primary database due to the need to generate unique values that are consistent across both primary and standby databases.

D: The performance impact on the physical standby database may occur if the CACHE size is too small. This is because the standby database will frequently have to access the primary database to replenish the cache, which can increase the load and potentially lead to performance degradation.

E: Global Sequences should have the NOORDER and CACHE options set. The NOORDER option ensures that sequence numbers are provided without guaranteeing sequence order, thus improving scalability and performance. The CACHE option is used to specify how many sequence values will be held in memory for faster access.

Option B is incorrect as the LOG_ARCHIVE_DEST_n parameter's definition for standbys pointing back to the primary does not directly pertain to the creation of sequences.

Option C is incorrect because there is no requirement that the size of the cache for a sequence must be at least 100. The CACHE size can be set to a different number based on specific use cases or performance considerations.

NEW QUESTION # 13

Which TWO are benefits of using Transaction Guard in a Data Guard environment?

- A. It provides application continuity by replaying transactions interrupted by a failover or a switchover
- B. It protects against user errors being replicated to standby databases.
- C. It protects against recoverable errors during a planned or an unplanned outage of a primary database.
- D. It provides application continuity by rolling back uncommitted transactions interrupted by a failover or switchover.
- E. It protects against logical corruptions being replicated to standby databases.

Answer: C,D

Explanation:

Transaction Guard provides benefits in terms of transaction consistency and recovery in a Data Guard environment:

It provides application continuity by rolling back uncommitted transactions interrupted by a failover or switchover (B): Transaction Guard ensures that any uncommitted transactions at the time of an outage are rolled back consistently, thus preserving the integrity of the application's data and state.

It protects against recoverable errors during a planned or an unplanned outage of a primary database (D): Transaction Guard offers protection against errors that can occur during outages, allowing applications to resume operations more quickly and reliably after recovery.

NEW QUESTION # 14

You have a Data Guard Broker configuration called 'Somewhere' as shown:

```
DGMGRL> SHOW CONFIGURATION;
```

Configuration - Somewhere

Protection Mode: MaxPerformance

Databases:

Nearby - Primary database

FS - Far Sync

Farout - Physical standby database

Fast-Start Failover: DISABLED

Configuration Status:

SUCCESS

You then run this command:

```
DGMGRL> SHOW DATABASE 'Nearby' 'InconsistentProperties';
```

Which two are true about the output of this DGMGRL command?

- A. A far sync instance cannot have inconsistent properties because it has no database.
- B. It shows all properties whose broker configuration values for database Nearby are inconsistent with the broker configuration values for database Farout.
- C. Any inconsistency reported is on an instance-specific basis.
- D. It shows all properties whose broker configuration values for database Nearby are inconsistent with the values in the corresponding server parameter file or the runtime values for database instance Nearby.

Answer: A,D

NEW QUESTION # 15

You are using Data Guard in conjunction with Global Database Services.

You have a Data Guard Broker configuration called Sales and a GDS pool called Prod.

Which three are true concerning the management of the broker configuration when using GDS?

- **A. DGMGRL may be used to add a single database to the Sales configuration even if Sales is a member of the Prod pool.**
- **B. DGMGRL may be used to add the Sales configuration to the Prod pool in gds.**
- C. Adding a database to the Sales configuration with DGMGRL requires that the Sales configuration be disabled first. It must then be enabled after the new database is added to the configuration.
- D. Adding a database to the Sales configuration with DGMGRL automatically adds the database to the Prod Pool.
- **E. Performing a role change with DGMGRL automatically notifies GDS which in turn activates the appropriate services.**

Answer: A,B,E

Explanation:

In the context of Oracle Data Guard and Global Database Services (GDS):

DGMGRL may be used to add the Sales configuration to the Prod pool in gds (A): Data Guard Broker's command-line interface DGMGRL can be utilized to manage configurations with GDS, allowing the addition of Data Guard Broker configurations to GDS pools.

Performing a role change with DGMGRL automatically notifies GDS which in turn activates the appropriate services (B): When a role change is executed using DGMGRL, GDS is automatically notified, and it then activates the services that are appropriate for the new database roles.

DGMGRL may be used to add a single database to the Sales configuration even if Sales is a member of the Prod pool (C):

DGMGRL provides the capability to manage individual databases within a broker configuration, including adding databases to a configuration that is already part of a GDS pool.

NEW QUESTION # 16

Which TWO statements are true for Data Guard environments with multi-tenant databases?

- **A. A multi-tenant standby database can have fewer pluggable databases than the primary container database.**
- **B. Different pluggable databases within a logical standby database may have different guard statuses.**
- C. The Data Guard broker automatically opens all pluggable databases of a primary database after a role change operation.
- D. The CDBDBA privilege must be used instead of the SYSDBA privilege for connections as SYS to the root container of a multi-tenant standby database.
- E. The Data Guard broker automatically always opens the pluggable databases of a standby database after a role change operation.

Answer: A,B

NEW QUESTION # 17

.....

It is important to mention here that the Oracle Database 19c: Data Guard Administration practice questions played important role in their Oracle 1z0-076 Exams preparation and their success. So we can say that with the Oracle 1z0-076 exam questions you will get everything that you need to learn, prepare and pass the difficult Oracle 1z0-076 exam with good scores. The Prep4King 1z0-076 Exam Questions are designed and verified by experienced and qualified Oracle 1z0-076 exam trainers. They work together and share their expertise to maintain the top standard of Oracle 1z0-076 exam practice test. So you can get trust on Oracle 1z0-076 exam questions and start preparing today.
