

Get Salesforce Analytics-Arch-201 Dumps - 100% Success Guaranteed

BONUS!!! Download part of Itbraindumps Analytics-Arch-201 dumps for free: <https://drive.google.com/open?id=1L6tGrSCVWF6limW4epLxasPDxynFNevZ>

Everyone has different learning habits, Analytics-Arch-201 exam simulation provide you with different system versions: PDF version, Software version and APP version. Based on your specific situation, you can choose the version that is most suitable for you, or use multiple versions at the same time. After all, each version of Analytics-Arch-201 Preparation questions have its own advantages. If you are very busy, you can only use some of the very fragmented time to use our Analytics-Arch-201 study materials. And each of our Analytics-Arch-201 exam questions can help you pass the exam for sure.

Salesforce Analytics-Arch-201 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none">• Design a Tableau Infrastructure: This section of the exam measures skills of Tableau Consultants and focuses on planning and designing a complex Tableau deployment. It covers gathering user requirements, licensing strategies including Authorization-to-Run, high availability and disaster recovery planning, and mapping server add-ons to the organization's needs. It includes planning and implementing Tableau Cloud with Bridge, authentication, user provisioning, and multi-site configuration. Additionally, it addresses migration planning across Tableau products, operating systems, identity stores, and consolidations, as well as designing process topologies, sizing, node roles, and recommending server configurations including security, hardware, and disaster recovery.

Topic 2	<ul style="list-style-type: none"> • Monitor and Maintain a Tableau Deployment: This section evaluates skills of Tableau Administrators in monitoring, maintaining, and optimizing Tableau environments. It involves creating custom administrative dashboards, conducting load testing using tools like TabJolt, and analyzing test results. Troubleshooting complex performance bottlenecks in workbooks and server resources is key, as is tuning caching and scaling strategies. It covers leveraging observability tools such as the Resource Monitoring Tool, analyzing logs and metrics, and adjusting architecture accordingly. Automation of maintenance functions using APIs, scripting, and scheduling is included, along with managing server extensions, content automation, dashboard extensions, web data connectors, and secure embedded solutions.
Topic 3	<ul style="list-style-type: none"> • Deploy Tableau Server: This domain assesses the ability of Tableau Administrators to perform production-ready deployments of Tableau Server. It encompasses installing and configuring Tableau Server with external components, supporting air-gapped environments, disaster recovery validations, and blue-green deployments. It includes configuring and troubleshooting various authentication methods such as SAML, Kerberos, and LDAP. The section also covers implementing encryption strategies, installing and verifying Tableau Server on Linux and Windows platforms, resolving installation and configuration issues, and managing service accounts and logging.

Certification Salesforce Analytics-Arch-201 Torrent, Test Analytics-Arch-201 Cram Review

Believe it or not, our Analytics-Arch-201 preparation questions will relieve you from poverty. It is important to make large amounts of money in modern society. Our Analytics-Arch-201 practice engine has assisted many people to improve themselves. You also can become the lucky guys as long as you are willing to learn. And with our Analytics-Arch-201 Exam Materials, you will find that to learn something is also a happy and enjoyable experience, and you can be rewarded by the certification as well.

Salesforce Certified Tableau Architect Sample Questions (Q160-Q165):

NEW QUESTION # 160

For a Tableau administrative dashboard designed to monitor user engagement, which metric would be most beneficial to include?

- A. The number of views created by users per month
- B. The server's uptime and downtime statistics
- C. The disk space used by the Tableau Server
- D. The amount of network traffic to and from the Tableau Server

Answer: A

Explanation:

The number of views created by users per month Including the metric of the number of views created by users per month on an administrative dashboard is effective for monitoring user engagement on Tableau Server. This metric provides valuable insights into how actively users are interacting with and utilizing the server, indicating the level of engagement and adoption of the platform. Option A is incorrect because disk space usage, while important for server maintenance, does not directly measure user engagement. Option C is incorrect as server uptime and downtime statistics, while critical for overall server health monitoring, do not directly reflect user engagement. Option D is incorrect because the amount of network traffic, although indicative of server usage, does not specifically measure user engagement in creating and interacting with views.

NEW QUESTION # 161

After installing Tableau Server on a Linux system, you notice that the server is not integrating properly with an external LDAP server for user authentication. What should be the first trouble-shooting step?

- A. Changing the LDAP server to a different authentication model
- B. Installing additional security certificates on the LDAP server

- C. Reconfiguring all user roles and permissions within Tableau Server
- **D. Verifying the network connectivity and port accessibility between the Tableau Server and the LDAP server**

Answer: D

Explanation:

Verifying the network connectivity and port accessibility between the Tableau Server and the LDAP server The first step in troubleshooting integration issues between Tableau Server on Linux and an external LDAP server is to verify network connectivity and port accessibility. This includes ensuring that the necessary ports are open and that there are no network barriers preventing communication between the two servers. Option A is incorrect because changing the LDAP server's authentication model does not address potential connectivity issues. Option C is in-correct as reconfiguring user roles and permissions within Tableau Server is unrelated to LDAP integration issues. Option D is incorrect because installing additional security certificates on the LDAP server is unlikely to resolve a connectivity or integration issue.

NEW QUESTION # 162

A company is experiencing high demand for complex data processing tasks in its Tableau environment. To optimize performance, when should the company consider using external services?

- A. Only for basic data visualization tasks to reduce the load on Tableau Server
- B. External services should never be used with Tableau Server
- **C. For complex data blending and analytics tasks that are resource-intensive**
- D. Use external services for all data processing tasks, regardless of complexity

Answer: C

Explanation:

For complex data blending and analytics tasks that are resource-intensive Utilizing external services for complex and resource-intensive tasks like data blending and analytics can help in optimizing the performance of the Tableau environment by offloading these demanding processes. Option A is incorrect because basic data visualization tasks are typically well-handled by Tableau Server itself. Option C is incorrect as external services can be beneficial for specific re-source-intensive tasks. Option D is incorrect because using external services for all tasks, regardless of complexity, can be inefficient and unnecessary.

NEW QUESTION # 163

In a multi-node Tableau Server environment, you are experiencing intermittent database connectivity issues. What should be the first step in troubleshooting this problem?

- A. Changing the database server to a different platform that is known for more stable connectivity
- **B. Checking the network configuration and firewalls between the Tableau Server nodes and the database server for any connectivity barriers**
- C. Upgrading the database server's hardware to improve its ability to handle connections
- D. Increasing the number of worker nodes in the Tableau Server environment to enhance overall connectivity

Answer: B

Explanation:

Checking the network configuration and firewalls between the Tableau Server nodes and the database server for any connectivity barriers The first step in troubleshooting intermittent database connectivity issues in a multi-node Tableau Server environment is to check the network configuration and firewall settings. This involves ensuring that there are no barriers or misconfigurations in the network that could be blocking or interrupting the connectivity between the Tableau Server nodes and the database server. Option A is incorrect because simply increasing the number of worker nodes may not address the underlying network connectivity issues. Option C is incorrect as upgrading the database server's hardware does not directly resolve network connectivity problems. Option D is incorrect because changing the database platform is a drastic measure and should be considered only after ruling out network-related issues.

NEW QUESTION # 164

In a scenario where Tableau Server on Linux is experiencing performance issues, which logs would be most useful to analyze first to diagnose the problem?

- A. The Tableau Server performance logs that include information on server processes and re-source usage
- B. The Linux system's boot logs to review the server startup sequence
- C. The database logs to assess query execution times and database performance
- D. The Linux system's authentication logs to check for unauthorized access attempts

Answer: A

Explanation:

The Tableau Server performance logs that include information on server processes and resource usage. When diagnosing performance issues with Tableau Server on Linux, the Tableau Server performance logs are most useful. These logs provide information on server processes, resource usage, and potential bottlenecks in server performance. Analyzing these logs can help identify specific areas that are impacting the overall performance of Tableau Server. Option A is incorrect because authentication logs are primarily used for security auditing and are less likely to provide insights into performance issues. Option C is incorrect as boot logs are useful for startup issues but not typically for ongoing performance problems. Option D is incorrect because while database logs can provide insights into database performance, they are not the first resource to check for general performance issues with Tableau Server.

NEW QUESTION # 165

.....

Our Analytics-Arch-201 training materials are excellent. The quality is going through official authentication. So your money paid for our Analytics-Arch-201 practice engine is absolutely worthwhile. In addition, you are advised to invest on yourselves. After all, no one can be relied on except yourself. And you can rely on our Analytics-Arch-201 learning quiz. We can claim that if you study with our Analytics-Arch-201 exam questions for 20 to 30 hours, then you are bound to pass the exam for we have high pass rate as 98% to 100%.
