Salesforce Order Management Administrator Accredited Professional Sample Questions (Q50-Q55):

NEW QUESTION # 50

Which two process exceptions are available out of the box in order management? (Choose 2)

- A. Navigate invoice amount
- B. Find location fault
- C. Inventory check exception
- D. Unable to capture payment

Answer: B,D

NEW QUESTION # 51

Universal Containers (UC) is evaluating Salesforce Order Management for managing its overarching process because their current system is written mostly in Apex code and has proved difficult to modify, deploy and debug. What are three advantages of using Flow Builder vs writing Apex code to manage the main flow of Order data?

- A. Because it is visual it is also self-documenting as changes are made
- B. The admin can easily debug specific business cases visually.
- C. It will notify the admin before a third party integration's data interface has changed
- D. It allows for non-coding members of staff to contribute suggestions for optimizations and better overall customer experience
- E. The admin can attach a debugger to live customer sessions

Answer: A,B,E

Explanation:

Three advantages of using Flow Builder vs writing Apex code to manage the main flow of Order data are:

The admin can attach a debugger to live customersessions. This allows the admin to monitor and troubleshoot the flow execution in real time, without affecting the customer experience or data integrity.

The admin can easily debug specific business cases visually. This allows the admin to test the flow with different input values and see how the flow behaves in a graphical interface, without writing any code.

Because it is visual it is also self-documenting as changes are made. This allows the admin to easily understand and maintain the flow logic, as well as track the changes and versions of the flow.

NEW QUESTION # 52

Which set of conditions is required for an Order Summary object to be created?

- A. An Order is created, its status is set to Draft, Create OrderSummaryFlow is installed and Create OrderSummary Flow is activated.
- **B. An Order is created, the Create Order Summary Process is installed and the Create Order Summary Process is active**
- C. An Order is created, its status is set to Activated. Create OrderSummary Flow is installed and the Create OrderSummary Process is installed.
- D. An Order is created, its status is set to Activated. Create OrderSummary Flow is installed and Create OrderSummary Flow is activated.

Answer: B

Explanation:

The Order Summary object is a custom object that stores information about an order, such as the total amount, the number of items, and the fulfillment status. The Order Summary object is created by a process called Create Order Summary Process, which runs whenever an order is created or updated. The process calls a flow called Create OrderSummary Flow, which calculates the order summary fields and creates or updates the order summary record. The process and the flow are part of the Order Management package and must be installed and activated for the order summary object to be created. NEW QUESTION # 53

When can an Invoice be created?

- A. At any point after the Fulfillment Order is created, by customizing flow 'Create Invoice and Ensure Funds'
- B. At any point before the Fulfillment Order is created, by customizing flow "Create invoice"
- C. At any point before the Fulfillment Order is created, by customizing flow "Create Invoice and Ensure Funds"
- **D. At any point after the Fulfillment Order is created, by customizing flow "Create Invoice"**

Answer: D

Explanation:

The correct time and way for creating an Invoice is at any point after the Fulfillment Order is created, by customizing flow "Create Invoice". This flow is a core action that creates an Invoice record from a Fulfillment Order record, and updates the status of both records accordingly. The administrator can customize this flow to suit their business needs, such as adding conditions, actions, or subflows. NEW QUESTION # 54

How can an administrator synchronize licenses from the production org when preparing a sandbox for development?

- A. Use a custom shell script
- B. Export a Change Set
- C. Import a Change Set
- **D. Run the Match Production Licenses to Sandbox without a Refresh tool in Setup**

Answer: D

Explanation:

The best way for an administrator to synchronize licenses from the production org when preparing a sandbox for development is to run the Match Production Licenses to Sandbox without a Refresh tool in Setup. This tool allows administrators to match their sandbox licenses with their production licenses without refreshing their sandbox. This way, the administrator can ensure that the sandbox has the same number and type of licenses as the production org, and avoid any license-related issues when developing or testing in the sandbox.
