Amazon AWS Certified Developer Associate Exam (DVA-C02) Sample Questions (Q32-Q37):

NEW QUESTION # 32

A software company needs to make sure user-uploaded documents are securely stored in Amazon S3. The documents must be encrypted at rest in Amazon S3. The company does not want to manage the security infrastructure in-house, but the company still needs extra protection to ensure it has control over its encryption keys due to industry regulations Which encryption strategy should a developer use to meet these requirements?

- A. Server-side encryption with AWS KMS managed keys (SSE-KMS)
- B. Server-side encryption with customer-provided encryption keys (SSE-C)
- C. Client-side encryption
- D. Server-side encryption with Amazon S3 managed keys (SSE-S3)

Answer: C

NEW QUESTION # 33

Which of the following are good use cases for how Amazon ElastiCache can help an application? (Select TWO.)

- A. Improve performance of compute-intensive applications.
- B. Improve latency and throughput for read-heavy application workloads.
- C. Improve the latency of deployments performed by AWS CodeDeploy
- D. Reduce the time required to merge AWS CodeCommit branches
- E. Improve the performance of S3 PUT operations

Answer: A,B

NEW QUESTION # 34

A development team maintains a web application by using a single AWS CloudFormation template. The template defines web servers and an Amazon RDS database. The team uses the Cloud Formation template to deploy the Cloud Formation stack to different environments.
During a recent application deployment, a developer caused the primary development database to be dropped and recreated. The result of this incident was a loss of data. The team needs to avoid accidental database deletion in the future.
Which solutions will meet these requirements? (Choose two.)

- A. Add a Cloud Formation DeletionPolicy attribute with the Retain value to the stack.
- B. Modify the database to use a Multi-AZ deployment.
- C. Add a CloudFormation Deletion Policy attribute with the Retain value to the database resource.
- D. Update the CloudFormation stack policy to prevent updates to the database.
- E. Create a CloudFormation stack set for the web application and database deployments.

Answer: C,E

NEW QUESTION # 35

Which one of the following operations is NOT a DynamoDB operation?

- A. DescribeTable
- B. BatchGetItem
- C. BatchDeleteItem
- D. BatchWriteItem

Answer: C

Explanation:
In DynamoDB, DeleteItem deletes a single item in a table by primary key, but BatchDeleteItem doesn't exist.
