NEW QUESTION # 25

Refer to the exhibit.

North-south traffic inspection

Which two types of traffic flow must the FortiGate cluster inspect, if the client at 198.51.100.10 sends traffic to the Workload A instance? (Choose two.)

- A. West-bound
- B. South-bound
- C. East-bound
- D. North-bound

Answer: B,C

Explanation:

South-bound traffic refers to traffic coming from outside the network (the client 198.51.100.10) into the internal environment. East-bound traffic refers to traffic moving laterally within the internal network, such as between VPCs or workloads, which the FortiGate cluster can inspect for internal threats.

NEW QUESTION # 26

An organization has decided to deploy an active-active high-availability cluster in Google Cloud.

Which three load balancing features are critical to the successful deployment of the cluster? (Choose three.)

- A. The session termination of the external passthrough network load balancer
- B. The forwarding rule for the internal passthrough network load balancer as the next hop for custom routes
- C. The symmetric hashing of the internal passthrough network load balancer
- D. The L3_DEFAULT protocol in the forwarding rule of the internal passthrough network load balancer
- E. The health check used by the internal and the external passthrough network load balancer

Answer: B,C,E

Explanation:

Health checks ensure load balancers route traffic only to healthy cluster members.

Forwarding rules act as next hops in routing, directing traffic appropriately within the HA cluster.

Symmetric hashing ensures consistent and balanced traffic distribution across cluster members, critical for active-active deployments.

NEW QUESTION # 27

Your organization has deployed an active-active high-availability (HA) FortiGate cluster in Google Cloud. You have noticed a significant increase in asymmetrical traffic flow. Which two actions can you take to mitigate the issue? (Choose two.)

- A. Enable the layer 3 unified threat management (UTM) scanning feature if the FortiGate devices are on FortiOS 6.4 or later.
- B. Enable source NAT for ingress traffic.
- C. Enable symmetric hashing on the external load balancer.
- D. Enable destination NAT for ingress traffic.

Answer: B,C

Explanation:

Enabling source NAT ensures consistent source IPs, promoting symmetric traffic flow.

Symmetric hashing on the load balancer helps distribute traffic flows evenly and consistently across cluster members, reducing asymmetric routing.
