

2V0-15.25인기자격증인증시험자료100%유효한시험자료

1. During VMware Cloud Foundation (VCF) deployment, which component validates the prerequisites and generates a deployment parameter workbook?

- A. SDDC Manager
- B. Cloud Builder
- C. NSX Manager
- D. vSphere Lifecycle Manager

Answer: B

2. Which tool is primarily used to scale-out a VCF instance by adding new workload domains?

- A. vSphere Client
- B. SDDC Manager
- C. NSX-T Manager
- D. HCX

Answer: B

3. When upgrading from VCF 8.x to VCF 9.0, which of the following must be upgraded first?

- A. vCenter Server
- B. NSX Manager
- C. SDDC Manager
- D. ESXi Hosts

Answer: C

4. What is required before converting an existing vSphere environment into a VCF workload domain?

- A. vSAN enabled cluster
- B. Distributed vSwitch created
- C. Active Directory integrated
- D. Dedicated NSX Edge cluster

Answer: A

5. Which log bundle is collected to troubleshoot failed workload domain creation in VCF?

- A. NSX logs
- B. vSphere logs
- C. SDDC Manager logs
- D. HCX logs

Answer: C

6. Which type of workload domain is mandatory in every VCF deployment?

- A. VI Workload Domain
- B. Management Workload Domain
- C. Edge Workload Domain
- D. vSAN Workload Domain

Answer: B

7. Which component is automatically deployed during the creation of a new workload domain?

2 / 3

Pass4Test의 VMware인증 2V0-15.25덤프는VMware인증 2V0-15.25시험에 도전장을 던진 분들이 신뢰할수 있는 든든한 길잡이 입니다. VMware인증 2V0-15.25시험대비 덤프뿐만아니라 다른 IT인증시험에 대비한 덤프자료도 적중율이 끝내줍니다. VMware인증 2V0-15.25시험이나 다른 IT인증자격증 시험이나Pass4Test제품을 사용해 보세요. 투자의 덤프비용보다 훨씬 큰 이득을 보실수 있을것입니다.

퍼펙트한VMware 2V0-15.25시험대비덤프자료는 Pass4Test가 전문입니다. VMware 2V0-15.25덤프를 다운받아 가장 쉬운 시험준비를 하여 한방에 패스가것입니다. 다같이 VMware 2V0-15.25덤프로 시험패스에 주문걸어 보아요. 마술처럼VMware 2V0-15.25시험합격이 실현될것입니다.

>> 2V0-15.25인기자격증 인증시험자료 <<

2V0-15.25인기자격증 인증시험자료 인기시험 기출문제

VMware인증 2V0-15.25시험을 등록하였는데 시험준비를 어떻게 해야 될지 몰라 고민중이시라면 이 글을 보고 Pass4Test를 찾아주세요. Pass4Test의VMware인증 2V0-15.25덤프샘플을 체험해보시면 시험에 대한 두려움이 사라질것입니다. Pass4Test의VMware인증 2V0-15.25덤프는VMware인증 2V0-15.25실제시험문제를 마스터한 기초에서 제작한 최신시험에 대비한 공부자료로서 시험패스율이 100%입니다. 하루 빨리 덤프를 마련하여 시험을 준비하시면 자격증 취득이 빨라 집니다.

최신 Professional Level Exams 2V0-15.25 무료샘플문제 (Q56-Q61):

질문 # 56

An administrator is adding a vSphere Supervisor using VMware NSX classic to an existing VMware Cloud Foundation (VCF) cluster using Distributed Connectivity. When attempting to enable the vSphere Supervisor for the domain the cluster shows up as incompatible with the reason:

No valid edge cluster for VDS 50 Ob 4d 9a cb 32 62 4d - 76 78 6b 92 cd 87 c4 5a Why is the cluster showing up as incompatible?

- A. vSphere Supervisor requires Central Connectivity.
- **B. The WCPReady tag has not been assigned to the NSX Edge Cluster.**
- C. AVI load balancing has not been enabled for the NSX Edge Cluster.
- D. The NSX Edge transport nodes have been deployed as large.

정답: B

설명:

A Comprehensive and Detailed Explanation: When enabling vSphere Supervisor with NSX Classic (using the traditional NSX-T Data Center networking stack rather than the newer NSX VPC mode), the vSphere Workload Management wizard filters the list of available NSX Edge Clusters to ensure they are explicitly designated for use with Kubernetes workloads.

The "WCPReady" Tag Requirement: The primary mechanism vCenter uses to identify a valid, compatible Edge Cluster for Workload Management is a specific tag on the NSX Edge Cluster object. This tag must be WCPReady (case-sensitive).

Symptoms: If this tag is missing-which often happens if the Edge Cluster was created manually in NSX Manager rather than through the SDDC Manager automation-the validation process will fail to find any usable clusters. This results in the specific error message: "No valid edge cluster for VDS [UUID]", or simply an empty list of compatible clusters in the wizard.

Resolution: The administrator must log in to the NSX Manager, navigate to System > Fabric > Nodes > Edge Clusters, select the target cluster, and manually add the tag WCPReady (often with the scope "Created for", though the tag itself is the critical filter).

Why other options are incorrect:

B: Large Edge nodes are actually a requirement for vSphere Supervisor (Small/Medium are typically unsupported for this role), so deploying them as Large would make the cluster compatible, not incompatible.

C: vSphere Supervisor fully supports Distributed Connectivity (connecting directly to the VDS), so Central Connectivity is not a hard requirement causing this specific error.

D: While AVI (NSX Advanced Load Balancer) is a supported load balancer, the "No valid edge cluster" error occurs during the Edge Cluster discovery phase, preceding the load balancer configuration.

질문 # 57

An administrator logs into the vSphere client to check the health of a cluster. An alert appears on the cluster stating, "vSphere HA host status".

The administrator toggles vSphere HA off and on and the following error appears on the host "A general system error occurred: Failed to start fdm service on host".

What is the cause of this issue?

- A. vSphere HA Admission Control settings are not configured correctly.
- **B. The vmware-fdm vib is missing from the ESX host.**
- C. vSphere HA startup policy is not configured correctly.
- D. The vmware-fdm service is disabled on the ESX host.

정답: B

설명:

vSphere High Availability (HA) depends on the FDM agent (Fault Domain Manager) that runs on every ESXi host in the cluster.

When an administrator enables HA on a cluster, vCenter automatically installs or updates the vmware-fdm VIB on each participating ESXi host. This VIB contains the HA agent binaries and is mandatory for HA services to start.

The error encountered:

"A general system error occurred: Failed to start fdm service on host"

is a classic and well-documented symptom of a missing or corrupted vmware-fdm VIB. When vSphere HA is toggled off and on, vCenter attempts to reinstall or restart the FDM agent; if the VIB is not present, HA cannot deploy successfully, and the FDM service fails to start.

Why the other answers are incorrect:

* A. The vmware-fdm service is disabled ESXi does not allow manual disabling of this system service in normal operations. If the

service fails to start, the root cause is usually the absence or corruption of the VIB-not a disabled service.

* C. Admission Control settings not configured correctly Admission Control errors affect VM failover capacity, not the ability to start FDM services.

* D. HA startup policy not configured correctly There is no per-host HA startup policy that prevents FDM from starting.

질문 # 58

An administrator is troubleshooting a problem with NSX.

Which command can be used to validate installed NSX VIBs on the ESX host?

- A. nsxcli get version
- B. esxcfg software list
- C. esxcli software vib list
- D. esxtop -b -d 2 -n 100

정답: C

설명:

When troubleshooting NSX on an ESXi host, VMware requires verification that NSX VIBs (vSphere Installation Bundles) are installed and in the correct state. VIBs are responsible for NSX datapath, control- plane modules, and kernel extensions on ESXi. The authoritative and documented method to list VIBs on an ESXi host is the command:

esxcli software vib list

This command displays all installed kernel modules, version numbers, NSX packages, and their installation status. For NSX-T (now part of VCF networking), administrators expect to see VIBs such as nsx-agg-service, nsx-bridge, nsx-esx-datapath, and others. If any required NSX VIBs are missing or inconsistent, the ESXi host will fail to join NSX transport nodes or will show "Not Ready."

Option A (esxtop) is for performance monitoring and does not show VIB information.

Option C (nsxcli get version) checks NSX version on Edge Nodes or host transport nodes but does not list VIBs.

Option D (esxcfg software list) is an outdated and invalid command.

질문 # 59

In VMware Cloud Foundation (VCF) Automation an administrator is troubleshooting an issue with a newly created Organization. When the Organization administrator attempts to create a Namespace, they receive an error "Failed to list VPC after selecting a region."

The administrator logs into the NSX Manager for the Region and does not see an NSX Project for the Organization. What could cause these symptoms?

- A. The Organization Administrator hasn't created a VPC in the selected Region.
- B. The Organization Administrator hasn't created a Project in the selected Region.
- C. The Provider Administrator hasn't granted the Organization Administrator role to the First User.
- D. The Provider Administrator hasn't set up the Organization's Networking Configuration for the selected Region.

정답: D

설명:

In VMware Cloud Foundation 9.0 Automation, every Organization requires a properly configured Networking Configuration for each Region in which it operates. This configuration step-performed by the Provider Administrator-creates the NSX Project corresponding to the Organization, enabling Namespace creation, VPC visibility, and workload provisioning.

The error "Failed to list VPC after selecting a region" combined with the absence of an NSX Project in NSX Manager is a direct indicator that the Organization's Networking Configuration was never initialized. VCF Automation automatically creates the NSX Project only when the Provider Admin completes this step.

Option B is invalid because the Organization Administrator cannot create NSX Projects manually; they are system-generated during networking setup.

Option C is incorrect because role assignment affects administrative permissions, not NSX project creation.

Option D is also incorrect-the Organization Admin cannot create a VPC until the NSX Project exists.

질문 # 60

An administrator has been tasked with expanding an existing VMware Cloud Foundation (VCF) workload domain by adding a new cluster. The VCF fleet has the following configuration:

* Three workload domains, including the management domain are configured.
 * The management domain (WLD-01) and one of the workload domains (WLD-02) are running VCF 9.0.
 * The other workload domain (WLD-03) is running VCF 5.2.1 and is an isolated workload domain.
 When attempting to perform the required steps using the vSphere Client UI the cluster cannot be added to the WLD-02 workload domain. What step should the administrator perform to complete the workload domain expansion?

- A. Use the VCF Operations Fleet Manager UI to create the cluster in WLD-02.
- B. Use the SDDC Manager UI to create the cluster in WLD-02.
- C. Use the SDDC Manager API to create the cluster in WLD-03.
- D. Use the vSphere Client UI to create the cluster in WLD-03.

정답: A

설명:

VMware Cloud Foundation 9.0 introduces a major architectural redesign that replaces the traditional SDDC Manager-centric domain management model with unified Fleet Management architecture implemented through VCF Operations Fleet Manager. In this model, each Workload Domain operates with its own vCenter, but Enhanced Linked Mode (ELM) is removed to improve isolation, reduce blast radius, and support multi-site scalability. As a result, administrators logged into the vSphere Client of the Management Domain can no longer manage or expand clusters in other Workload Domains, which explains why the vSphere UI blocks the attempted expansion of WLD-02.

Fleet Manager becomes the new authoritative control plane for lifecycle, topology, host commissioning, and workload domain expansion. Only Fleet Manager maintains the full global view necessary to orchestrate cluster addition operations across distributed vCenters and domains. Because WLD-02 is running VCF 9.0 and is fully fleet-aware, its expansion must occur through VCF Operations Fleet Manager, not through the vSphere Client or legacy SDDC Manager workflows.

Options involving WLD-03 are invalid since that domain is running VCF 5.2.1, is isolated, and cannot participate in fleet-aware operations. SDDC Manager (A) is no longer the correct interface for VCF 9.0 domain expansion operations.
