Do you feel aimless and helpless when the AgilePM-Foundation exam is coming soon? If your answer is absolutely yes, then we would like to suggest you to try our AgilePM-Foundation training materials, which are high quality and efficiency test tools. Your success is 100% ensured to pass the AgilePM-Foundation Exam and acquire the dreaming certification which will enable you to reach for more opportunities to higher incomes or better enterprises.

AgilePM is a highly popular project management approach that is being used by organizations all over the world. The AgilePM framework is designed to be flexible, adaptable, and collaborative, making it ideal for projects that have a high level of uncertainty or require frequent changes. The AgilePM certification is highly valued by employers and is recognized as one of the top certifications in the field of project management.

APMG-International Agile Project Management (AgilePM) Foundation Exam Sample Questions (Q49-Q54):

NEW QUESTION # 49

Which of the following statements, about the use of symbolic actions and symbolism to appeal to people's hearts and minds, are true?

- * Leaders must lead by example.
- * Only leaders can influence change.

- A. Neither 1 nor 2 is true.
- B. Both 1 and 2 are true.
- C. Only 2 is true.
- **D. Only 1 is true.**

Answer: D

Explanation:

* Statement 1: Correct. Leading by example is crucial for inspiring trust and alignment with the change vision. Symbolic actions by leaders play a significant role in fostering engagement.

* Statement 2: Incorrect. Change influence is not limited to leaders; team members and change agents can also drive and inspire change.

Key AgilePM Concepts Referenced:

* Role of Leadership in Change: AgilePM Handbook, Chapter 6, Section 6.2.

NEW QUESTION # 50

Where should the specific measures be recorded, to check whether the beneficiary of a User Story can use it?

- A. Criteria
- B. Conversation
- **C. Confirmation**
- D. Context

Answer: C

Explanation:

In agile practice, a User Story is often framed by the "3 Cs": Card, Conversation, and Confirmation. The Card captures just enough of the requirement to spark dialogue. The Conversation is the collaborative discussion among Product Owner (or Customer/Business), Developers, and other stakeholders that elaborates details and clarifies intent. The Confirmation element records the specific, testable acceptance criteria that will be used to verify the story delivers the intended outcome for its beneficiary (the user or customer). These acceptance criteria translate stakeholder expectations into objective checks-often articulated as scenarios or examples-that determine whether the story is fit for purpose and "Done." Agile Project Management approaches (including AgilePM/DSDM and Scrum-aligned practices) emphasize that acceptance criteria belong with the story as its Confirmation, because that is what allows the team to assert value delivery, guide development and testing, and anchor Sprint Review demonstrations. Therefore, the appropriate place to record the concrete measures by which a user can successfully use the delivered capability is the Confirmation section of the User Story.

NEW QUESTION # 51

How does AgilePM address risk management in the context of a project environment?

- A. By separating risk management from other project activities to ensure that it is treated independently.
- **B. By integrating risk management into the day-to-day project approach and relying on collaboration and transparency.**
- C. By following a rigid, rule-based approach to ensure all risks are documented and tracked.
- D. By emphasizing only contract negotiation over customer collaboration to ensure risk control.

Answer: B

Explanation:

Comprehensive and Detailed Explanation (paraphrased from Agile Project Management guidance):

AgilePM treats risk management as an intrinsic, continuous activity rather than a siloed function. It reduces uncertainty through short timeboxes, early and frequent validation, empowered cross-functional teams, and active business involvement. Collaborative practices-facilitated workshops, visible backlogs, daily coordination, and regular reviews-surface risks early and promote rapid mitigation through transparency. MoSCoW prioritization and incremental delivery protect time and quality, containing exposure while

enabling trade-offs when new information emerges. Formal artifacts and governance still exist, but they are lightweight and outcome-oriented, supporting timely decisions instead of creating bureaucracy. Options B and C conflict with AgilePM's integrated, collaborative stance by proposing rigid or separated processes. Option D contradicts agile values by elevating contracts over customer collaboration. Consequently, the accurate description is A: integrate risk thinking into everyday work, leveraging collaboration and transparency to manage uncertainty.

NEW QUESTION # 52

Which of the following statements about the Project Approach Questionnaire (PAQ) are true?

Should be revisited at the end of Foundations.

Should be revisited each time Foundations is revisited.

- A. Both 1 and 2 are true
- B. Neither 1 or 2 is true
- C. Only 2 is true
- D. Only 1 is true

Answer: A

Explanation:

The PAQ is a living risk and alignment aid used to expose approach-based risks-culture, leadership, governance expectations, stakeholder availability, decision latency, technical readiness-and to agree mitigations. AgilePM positions the PAQ for early use and for periodic re-use at key checkpoints. As the Foundations phase completes, the project has clarified goals, governance, roles, and planning baselines; revisiting the PAQ then helps validate that the agreed approach actually fits the now-explicit context and that residual risks have owners and responses. If Foundations is later revisited (for example, after significant change in scope, funding, or organization), the PAQ should be revisited as well to re-check assumptions and tune mitigations. Treating the PAQ as a one-off document would miss its purpose: to sustain a fit-for-purpose approach as conditions evolve. Therefore, both statements are true.

NEW QUESTION # 53

The Product Owner has identified the need for staff training, to ensure the value from the evolving product is fully realized.

Which role should the Product Owner discuss this with?

- A. Project Manager
- B. Business Visionary
- C. Business Sponsor
- D. Scrum Master

Answer: B

Explanation:

Realizing business value often depends on business change enablement-including user training, readiness, and adoption. In AgilePM, the Business Visionary owns the business vision and ensures the evolving solution will deliver the expected benefits in operational use. They coordinate with Business Ambassadors and other stakeholders to prepare the organization (e.g., training, process updates) so that increments translate into realized value. While a Project Manager may help plan logistics and the Scrum Master facilitates the team, accountability for ensuring the business side is prepared to exploit the product sits with the Business Visionary. The Business Sponsor owns investment and justification; they may support funding for training, but the Visionary leads aligning solution capabilities with people and practice changes needed for benefit realization.
