# Implementing Cisco Application Centric Infrastructure valid test questions & 300-620 pdf vce & 300-620 torrent dumps

BONUS!!! Download part of PracticeDump 300-620 dumps for free: https://drive.google.com/open?id=1O7Dm-JnhFbluECwR4940K80CJ5EiPSlk

PracticeDump Implementing Cisco Application Centric Infrastructure (300-620) self-evaluation tests serve as a call to action, guiding you on how to improve your performance before the Cisco 300-620 real exam. PracticeDump's Implementing Cisco Application Centric Infrastructure (300-620) web-based and desktop practice dumps also provide candidates with a realistic 300-620 Exam scenario, allowing them to experience the 300-620 actual exam situation and prepare accordingly. Our 300-620 practice questions offer an excellent opportunity to identify and practice the strategies that work best for you.

Cisco ACI technology is a holistic approach to network infrastructure that enables IT professionals to automate and simplify the management of complex data center networks. The technology provides a unified fabric that integrates physical and virtual environments into a single management domain. It also provides enhanced security features and policy-based automation, which can help organizations improve their network agility, reduce costs, and enhance their overall security posture.

Exam Details

Cisco doesn't usually reveal the details of its certification exams. You will not know the exact number of questions, as well as their formats before you actually sit for the real test. The only thing that we know for sure about Cisco 300-620 DCACI is that it lasts 90 minutes. The passing scores for the Cisco exams are set on the basis of statistical analysis and are not published beforehand as well. The test takers receive a score report together with a score breakout by domain and the pass mark for a particular exam after the completion of the testing session.

To schedule the 300-620 Exam, you need to create an account with the Cisco testing partner – Pearson VUE. You should select the section "Proctored Exams" and insert the code of your test. Additionally, you will have to pay the fee of $300 to have access to the exam. This certification test is delivered in the English language only.

To build a solid foundation for the Cisco 300-620 exam, the learners can use the preparation options offered by Cisco on its official webpage. The potential test takers can choose from an instructor-led course delivered in the classroom, an online instructor-led course, or a self-paced virtual course with practical and video lectures.

Cisco 300-620 Exam Questions: Reduce Your Chances Of Failure

Our 300-620 Online test engine is convenient and easy to learn, it supports all web browsers. If you want, you can have offline practice. One of the most outstanding features of 300-620 Online test engine is it has testing history and performance review. You can have general review of what you have learnt. Besides, 300-620 Exam Braindumps offer you free demo to have a try before buying. You can get the downloading link and password within ten minutes after payment. 300-620 exam dumps contain both questions and answers, and it's convenient for you to check your answers.

Prerequisites

Thus, the Cisco 300-620 Exam is intended for network and security practitioners, including network engineers, network designers, and systems engineers. This professional-level certification test authenticates one's skills in working with data center solutions and allows them to keep up the pace with the ever-changing trends using advanced data center technologies as well as implement them in their daily tasks. Before sitting for this exam, you should deal with the core test and also prepare for the content that will be covered in it.

The whole path covers the details of core technologies and proves your ability to use best practices in designing, troubleshooting, and implementing the infrastructure of a modern data center, configuration of series switches, or usage of the automation for data center solutions. Therefore, you need to be ready for these topics.

Cisco Implementing Cisco Application Centric Infrastructure Sample Questions (Q140-Q145):

NEW QUESTION # 140
An engineer must implement management policy and data plane separation in the Cisco ACI fabric. Which ACI object must be created in Cisco APIC to accomplish this goal?

- A. Bridge domain
- B. Contract
- C. Application profile
- D. Tenant

Answer: D

Explanation:
An ACI tenant is a secure and exclusive virtual computing environment that forms a unit of isolation from a policy perspective but does not represent a private network.
If you investigate further into use cases for tenants in the real world, you will find that tenants are often deployed in order to achieve these two technical controls:
- Administrative separation
- Configuration fault isolation

NEW QUESTION # 141
Which two components are essential parts of a Cisco ACI Virtual Machine Manager (VMM) domain policy configuration? (Choose two.)

- A. IP address pool association
- B. EPG association

- C. Layer 3 outside interface association
- D. EPG static port binding
- E. VMM domain profile

Answer: B,E

Explanation:
https://www.cisco.com/c/en/us/td/docs/switches/datacenter/aci/apic/sw/1-x/aci- fundamentals/b_ACI-Fundamentals/b_ACI-Fundamentals_chapter_01011.html#concept_74EFC437C0AA44A391676F70ACE59DF3

Virtual Machine Manager Domain Main Components

ACI fabric virtual machine manager (VMM) domains enable an administrator to configure connectivity policies for virtual machine controllers. The essential components of an ACI VMM domain policy include the following:

- **Virtual Machine Manager Domain Profile**—Groups VM controllers with similar networking policy requirements. For example, VM controllers can share VLAN pools and application endpoint groups (EPGs). The APIC communicates with the controller to publish network configurations such as port groups that are then applied to the virtual workloads. The VMM domain profile includes the following essential components:

  - **Credential**—Associates a valid VM controller user credential with an APIC VMM domain.

  - **Controller**—Specifes how to connect to a VM controller that is part of a policy enforcement domain. For example, the controller specifies the connection to a VMware vCenter that is part a VMM domain.

  > **Note** A single VMM domain can contain multiple instances of VM controllers, but they must be from the same vendor (for example, from VMware or from Microsoft.

- **EPG Association**—Endpoint groups regulate connectivity and visibility among the endpoints within the scope of the VMM domain policy. VMM domain EPGs behave as follows:

  - The APIC pushes these EPGs as port groups into the VM controller.

  - An EPG can span multiple VMM domains, and a VMM domain can contain multiple EPGs.

- **Attachable Entity Profile Association**—Associates a VMM domain with the physical network infrastructure. An attachable entity profile (AEP) is a network interface template that enables deploying VM controller policies on a large set of leaf switch ports. An AEP specifies which switches and ports are available, and how they are configured.

- **VLAN Pool Association**—A VLAN pool specifies the VLAN IDs or ranges used for VLAN encapsulation that the VMM domain consumes.

NEW QUESTION # 142

An engineer must configure Cisco ACI for VMM integration to VMware vCenter. Which two attributes must be configured on the Cisco APIC to achieve this goal? (Choose two.)

- A. port group
- B. data center name
- C. logon credentials
- D. virtual switch name
- E. cluster name

Answer: C,D

NEW QUESTION # 143

Where is the COOP database located?

- A. leaf
- B. APIC
- C. endpoint
- D. spine

Answer: D

Explanation:
Section: ACI Fabric Infrastructure
Explanation/Reference: https://www.cisco.com/c/en/us/solutions/collateral/data-center-virtualization/application-centric-infrastructure/white-paper-c11-739989.html

NEW QUESTION # 144
How is broadcast forwarded in Cisco ACI Multi-Pod after ARP flooding is enabled?

- A. Within a pod, the ingress leaf switch floods the broadcast frame on all fabric ports.
- B. Broadcast frames are forwarded inside the pod and across the IPN using the multicast address that is associated to the bridge domain.
- C. For the specific bridge domain, all spines forward the broadcast frames to IPN routers.
- D. Ingress replication is used on the spines to forward broadcast frames in the IPN infrastructure.

Answer: B

NEW QUESTION # 145
