Salesforce Sample Questions (Q29-Q34):

NEW QUESTION # 29
Visualforceページ内のカスタムデータテーブルで数千件の取引先レコードを一度に読み込むと、レンダリング時間が遅くなるというユーザーからの苦情が寄せられています。開発者はこのような問題を軽減するために何ができるでしょうか?

- A. 標準のアカウント リスト コントローラを使用してページ区切りを実装します。
- B. アカウントレコードをクエリするときに、Apex コードで transient キーワードを使用します。
- C. JavaScript リモート処理を使用してアカウントを照会します。
- D. サードパーティのデータ テーブル ライブラリを静的リソースとしてアップロードします。

Answer: A

Explanation:
Loading "thousands" of records at once into a Visualforce page causes performance issues primarily due to the heavy DOM processing required to render thousands of table rows and the large View State generated.
The most effective way to improve performance and user experience in this scenario is pagination. Instead of rendering all records simultaneously, pagination displays a subset (e.g., 20 records) at a time. Using the StandardSetController (which is implied by "standard Account List controller" in the context of lists) allows for efficient server-side pagination. It queries and retrieves only the records needed for the current page view, drastically reducing the View State size and the DOM elements the browser must render.
While JavaScript Remoting (Option D) is fast for data retrieval, pagination is the fundamental pattern required to solve the "render time" issue for large lists.

NEW QUESTION # 31
開発者はテストの失敗をサンドボックスで確認しますが、本番環境では確認しません。サンドボックスの作成以来、どちらの環境にもコードやメタデータの変更は積極的に加えられていません。
問題を解決するにはどの考慮事項を確認する必要がありますか?

- A. [並列 Apex テストを無効にする] がオフになっていることを確認します。
- B. Apex クラスが同じ API バージョンであることを確認します。
- C. サンドボックスが運用環境と同じリリースであることを確認してください。
- D. テスト クラスが SeeAllData = true を使用していることを確認します。

Answer: C

Explanation:
If test failures are occurring in a sandbox but not in production and there have been no active code or metadata changes, it could be due to differences in the Salesforce release versions between the two environments.
Sandboxes can be on preview instances which get upgraded to new releases before production instances. This can lead to differences in behavior and could affect test executions. Ensuring that both the sandbox and production are on the same release can resolve such issues. API version differences and parallel testing settings typically do not cause discrepancies if the code hasn't changed, and while using SeeAllData=true is generally not recommended due to its dependence on the organization's data, it's unlikely to be the cause if the issue is related to the environment rather than the data.
