## Palo Alto Networks Cloud Security Professional Sample Questions (Q136-Q141):

### NEW QUESTION # 136

The Unusual protocol activity (Internal) network anomaly is generating too many alerts. An administrator has been asked to tune it to the option that will generate the least number of events without disabling it entirely. Which strategy should the administrator use to achieve this goal?

- A. Change the Training Threshold to Low
- **B. Set the Alert Disposition to Conservative**
- C. Set Alert Disposition to Aggressive
- D. Disable the policy

**Answer: B**

Explanation:

To reduce the number of alerts generated by the "Unusual protocol activity (Internal)" network anomaly without entirely disabling the policy, setting the Alert Disposition to Conservative (option B) is the most effective strategy. This configuration adjusts the sensitivity of the anomaly detection, reducing the likelihood of false positives and minimizing alert fatigue without compromising the ability to detect genuine security threats. By adopting a more conservative approach to anomaly detection, the administrator can ensure that only the most significant and potentially harmful activities trigger alerts, thus maintaining a balance between security vigilance and operational efficiency.

### NEW QUESTION # 137

What are the subtypes of configuration policies in Prisma Cloud?

- A. Security and Compliance
- **B. Build and Run**
- C. Monitor and Analyze
- D. Build and Deploy

**Answer: B**

Explanation:

In Prisma Cloud, configuration policies are categorized to align with the different phases of the cloud security lifecycle, emphasizing a holistic approach to cloud security management. The subtypes "Build and Run" encapsulate this approach by covering both the development phase (Build) - where cloud resources and applications are designed and created, and the operational phase (Run) - where these resources and applications are deployed and actively used. This categorization ensures that security and compliance are integral throughout the lifecycle, from the initial creation of cloud infrastructure and applications to their deployment and day-to-day operation, thereby enhancing the overall security posture.

Reference: <https://docs.paloaltonetworks.com/prisma/prisma-cloud/prisma-cloud-admin/prisma-cloud-policies/create-a-policy.html>

In Prisma Cloud, Config policies have built-in CLI commands for auto-remediation. These policies help in identifying misconfigurations within cloud environments and can automatically execute remediation commands to correct the configurations without manual intervention. This feature is part of Prisma Cloud's comprehensive approach to maintaining cloud security posture by ensuring that cloud resources are configured in accordance with best practices and compliance standards.

### NEW QUESTION # 140

Put the steps involved to configure and scan using the IntelliJ plugin in the correct order.

**Answer:**

Explanation:

□ Explanation:

\* Install IntelliJ IDE

\* Add Prisma Cloud plugin

\* Configure the Prisma Cloud plugin

\* Scan using the Prisma Cloud plugin

To configure and use the Prisma Cloud plugin for scanning within the IntelliJ Integrated Development Environment (IDE), you must follow a series of steps in a specific order to ensure proper setup and functionality.

Firstly, you need to have the IntelliJ IDE installed on your system. Without the IDE, you cannot add or use the Prisma Cloud plugin, as it is designed to work within this development environment.

Secondly, after installing the IntelliJ IDE, you add the Prisma Cloud plugin. This involves navigating to the plugin marketplace within IntelliJ and selecting the Prisma Cloud plugin for installation.

Once the plugin is added to your IntelliJ IDE, the next step is to configure the Prisma Cloud plugin. This configuration may include setting up your Prisma Cloud credentials, specifying your scan options, and other settings that tailor the plugin's functionality to your needs.

Finally, after the plugin is installed and configured, you can proceed to scan your project using the Prisma Cloud plugin. This will check your code against security policies and compliance standards, providing feedback and recommendations for any identified issues.

Following these steps ensures that the Prisma Cloud plugin is properly integrated into your IntelliJ development workflow, allowing for continuous security and compliance checks as part of the development process.
