

Everybody wants success, but not everyone has a strong mind to persevere in study. If you feel unsatisfied with your present status, our 156-551 actual exam can help you out. Our 156-551 exam questions always boast a pass rate as high as 99%. Using our study materials can also save your time in the exam preparation. If you choose our 156-551 Test Engine, you are going to get the certification easily. Just make your choice and purchase our 156-551 study materials and start your study right now! Knowledge, achievement and happiness are waiting for you!

CheckPoint 156-551, also known as Check Point Certified VSX Specialist - R81 (CCVS), is a certification exam that validates the skills and knowledge of professionals in the field of virtual systems extension (VSX) technology. 156-551 Exam is designed to assess an individual's ability to design, deploy, and manage VSX solutions on Check Point's R81 platform.

CheckPoint Check Point Certified VSX Specialist - R81 (CCVS) Sample Questions (Q33-Q38):

NEW QUESTION # 33

Which networking options are available when adding VSX to a complex environment? (Choose two)

- A. SSL termination
- B. Layer 4 routing
- C. Interface bonding (LACP)
- D. Virtual Switches for Layer 2

Answer: C,D

Explanation:

In complex VSX deployments, administrators can use bonding for redundancy and throughput (LACP) and Virtual Switches for internal Layer 2 connectivity among VSs. These allow flexible, scalable network designs.

NEW QUESTION # 34

Which VSX feature enables routing to be based on user-defined rules?

- A. Centralized Address NAT
- B. OSPF Area Filtering
- C. Policy-Based Routing
- D. Route Injection

Answer: C

Explanation:

Policy-Based Routing (PBR) allows routing decisions to be made based on flexible rules such as source address, service, or incoming interface. It adds customization beyond standard routing table logic.

NEW QUESTION # 35

What are the benefits of Centralized Dynamic Routing in VSX? (Choose two)

- A. No support for route redistribution
- B. Lower CPU resource usage
- C. Full isolation per VS
- D. Simplified route management

Answer: B,D

Explanation:

Centralized Dynamic Routing reduces the configuration overhead by managing all routing processes in VS0. This shared routing model also conserves resources by avoiding redundant routing processes in each VS.

NEW QUESTION # 36

Which command provides visibility into the number of concurrent connections per Virtual System?

- A. fw tab -t connections
- B. fw ctl pstat
- C. cpview
- D. fw ctl multik stat

Answer: C

Explanation:

Inside cpview, under the VS-specific tab, you can view the number of concurrent connections per Virtual System. This metric is crucial for evaluating session pressure or potential overload conditions.

NEW QUESTION # 37

Which options allow integration of dynamic routing into VSX with minimal per-VS configuration?
(Choose two)

- A. Use centralized routing model
- B. Enable route propagation via VS0
- C. Use static routes only
- D. Configure OSPF on each VS individually

Answer: A,B

Explanation:

Using a centralized routing model with route propagation through VS0 reduces the need to configure routing protocols on each VS. This minimizes effort while maintaining dynamic updates across the system.

NEW QUESTION # 38
