New Cisco 350-701 Study Materials, Reliable 350-701 Test Forum

Our Cisco 350-701 practice exam simulator mirrors the 350-701 exam experience, so you know what to anticipate on Implementing and Operating Cisco Security Core Technologies (350-701) certification exam day. Our Implementing and Operating Cisco Security Core Technologies practice test ITdumpsfree features various question styles and levels, so you can customize your Cisco 350-701 Exam Questions preparation to meet your needs.

Cisco 350-701 Certification Exam, also known as Implementing and Operating Cisco Security Core Technologies, is designed to test the knowledge and skills of IT professionals in the field of network security. 350-701 exam is aimed at those individuals who want to validate their expertise in implementing and operating core security technologies, such as network security, cloud security, endpoint protection, secure network access, visibility and enforcement, and more.

Cisco Implementing and Operating Cisco Security Core Technologies Sample Questions (Q621-Q626):

NEW QUESTION # 621

Which PKI enrollment method allows the user to separate authentication and enrollment actions and also provides an option to specify HTTP/TFTP commands to perform file retrieval from the server?

- A. url
- B. selfsigned
- C. profile
- D. terminal

Answer: C

Explanation:

Explanation A trustpoint enrollment mode, which also defines the trustpoint authentication mode, can be performed via 3 main methods: 1. Terminal Enrollment - manual method of performing trustpoint authentication and certificate enrolment using copy-paste in the CLI terminal. 2. SCEP Enrollment - Trustpoint authentication and enrollment using SCEP over HTTP. 3. Enrollment Profile - Here, authentication and enrollment methods are defined separately. Along with terminal and SCEP enrollment methods, enrollment profiles provide an option to specify HTTP/TFTP commands to perform file retrieval from the Server, which is defined using an authentication or enrollment url under the profile. Reference: <https://www.cisco.com/c/en/us/support/docs/security-vpn/public-key-infrastructure-pki/211333-IOSPKI-Deployment-Guide-Initial-Design.html> A trustpoint enrollment mode, which also defines the trustpoint authentication mode, can be performed via 3 main methods:

NEW QUESTION # 622

Which public cloud provider supports the Cisco Next Generation Firewall Virtual?

- A. Google Cloud Platform
- B. Red Hat Enterprise Visualization
- C. VMware ESXi
- D. Amazon Web Services

Answer: D

Explanation:

Explanation:

Cisco Firepower NGFW Virtual (NGFWv) is the virtualized version of Cisco's Firepower next generation firewall.

The Cisco NGFW virtual appliance is available in the AWS and Azure marketplaces. In AWS, it can be deployed in routed and passive modes. Passive mode design requires ERSPAN, the Encapsulated Remote Switched Port Analyzer, which is currently not available in Azure.

In passive mode, NGFWv inspects packets like an Intrusion Detection System (IDS) appliance, but no action can be taken on the packet.

In routed mode NGFWv acts as a next hop for workloads. It can inspect packets and also take action on the packet based on rule and policy definitions.

NEW QUESTION # 623

Drag and drop the descriptions from the left onto the correct protocol versions on the right.

Answer:

Explanation:

NEW QUESTION # 624

What provides the ability to program and monitor networks from somewhere other than the DNAC GUI?

- A. API
- B. desktop client
- C. NetFlow
- D. ASDM

Answer: A

NEW QUESTION # 625

Refer to the exhibit. When configuring this access control rule in Cisco FMC, what happens with the traffic destined to the DMZ_inside zone once the configuration is deployed?

- A. No traffic will be allowed through to the DMZ_inside zone regardless of if it's trusted or not.
- B. All traffic from any zone will be allowed to the DMZ_inside zone only after inspection.
- C. All traffic from any zone to the DMZ_inside zone will be permitted with no further inspection.
- D. No traffic will be allowed through to the DMZ_inside zone unless it's already trusted.

Answer: C
