

Analytics-Con-301 Schulungsmaterialien & Analytics-Con-301 Dumps Prüfung & Analytics-Con-301 Studienguide

Task 6

From the desktop, open the **NYC Property Transactions** workbook.

You need to record the performance of the Property Transactions dashboard in the NYC Property Transactions.twbx workbook. Ensure that you start the recording as soon as you open the workbook. Open the **Property Transactions** dashboard, reset the filters on the dashboard to show all values, and stop the recording. Save the recording in C:\CC\Data\.

Create a new worksheet in the performance recording. In the worksheet, create a bar chart to show the elapsed time of each command name by worksheet, to show how each sheet in the Property Transactions dashboard contributes to the overall load time.

From the File menu in Tableau Desktop, click **Save**. Save the performance recording in C:\CC\Data\.

Möchten Sie in kurzer Zeit die Analytics-Con-301 Salesforce Zertifizierungsprüfung bestehen? Unser Fast2test bietet Ihnen die Testfragen und Antworten zur Salesforce Analytics-Con-301 Zertifizierung, die von den IT-Experten durch Experimente und Praxis erhalten werden und über IT-Zertifizierungserfahrungen über 10 Jahre verfügt. Außerdem gewährt unser Fast2test Ihnen die vollständigsten Zertifizierungskriterien sowie Ausbildungsmethoden. Die Ergebnisse von unseren Kunden haben bewiesen, dass die Genauigkeit der Salesforce Analytics-Con-301 Zertifizierung 100% beträgt! Wenn Sie irgendeine Frage über die Analytics-Con-301 Prüfung haben, werden wir so schnell wie möglich beantworten.

Salesforce Analytics-Con-301 Prüfungsplan:

Thema	Einzelheiten
Thema 1	Business Consulting: For Tableau Consultants, this section involves designing and troubleshooting calculations and workbooks to meet advanced analytical use cases. It covers selecting appropriate chart types, applying Tableau's order of operations in calculations, building interactivity into dashboards, and optimizing workbook performance by resolving resource-intensive queries and other design-related issues.
Thema 2	Business Analysis: This section of the exam measures skills of Tableau Consultants focusing on evaluating the current state of analytics within an organization. It covers mapping business needs to Tableau capabilities, translating analytical requirements to best practices in Tableau, and recommending appropriate deployment options like Tableau Server or Tableau Cloud. It also includes evaluating existing data structures for supporting business needs and identifying performance risks and opportunities.
Thema 3	IT Management: This domain measures skills related to managing Tableau environments. It includes planning server upgrades, recommending deployment solutions (on-premise or cloud), and ensuring alignment between technical and business requirements for analytics infrastructure. It also involves troubleshooting and optimizing system performance relevant to Tableau Server and Cloud deployments.

Analytics-Con-301 neuester Studienführer & Analytics-Con-301 Training Torrent prep

Alle Anfang ist schwer. Zögern Sie noch, wie mit der Vorbereitung der Salesforce Analytics-Con-301 Prüfung anfangen? Die Prüfungsunterlagen der Salesforce Analytics-Con-301 von uns zu kaufen wird ein notwendiger Schritt Ihrer Vorbereitung. Was wir Ihnen bieten, ist nicht nur was Sie möchten, sondern auch was für Ihre Vorbereitung der Salesforce Analytics-Con-301 Prüfung unerlässlich ist. Vielleicht haben Sie noch Hemmungen mit diesem Schritt. So können Sie zuerst die Demo der Salesforce Analytics-Con-301 Prüfungsunterlagen herunterladen. Nachdem Sie probiert haben, werden Sie bestimmt diesen Schritt machen.

Salesforce Certified Tableau Consultant Analytics-Con-301 Prüfungsfragen mit Lösungen (Q99-Q104):

99. Frage

A client is searching for ways to curate and document data in order to obtain data lineage. The client has a data source connected to a data lake.

Which tool should the consultant recommend to meet the client's requirements?

- A. Tableau Prep Conductor
- B. Tableau Catalog without Tableau Data Management Add-on
- C. Tableau Catalog with Tableau Data Management Add-on**
- D. Tableau Catalog with Tableau Server Management Add-on

Antwort: C

Begründung:

To effectively curate and document data for obtaining data lineage, particularly from a data source connected to a data lake, the recommended tool is:

* Tableau Catalog with Tableau Data Management Add-on: This add-on enhances the capabilities of Tableau Catalog, providing extensive features for data management, including detailed data lineage, impact analysis, and metadata management.

* Functionality: The Tableau Catalog with the Data Management Add-on allows users to see the full history and lineage of the data, trace its usage across all Tableau content, and understand dependencies.

It also facilitates better governance and transparency in data handling.

* Why Choose this Tool: For a client needing comprehensive data lineage and documentation capabilities, this add-on ensures that data stewards and users can maintain and utilize a well-managed data environment. It supports robust data governance practices necessary for large and complex data ecosystems like those typically associated with data lakes.

References

The recommendation is based on the functionalities offered by the Tableau Data Management Add-on, as described in Tableau's

official documentation on managing and documenting data sources for enhanced governance and operational efficiency.

100. Frage

A consultant has a view using a table calculation to calculate percent of total Sales by Category. The consultant would like to filter out particular categories, but wants the percent of total calculation to remain steady even as they filter items in or out. What should the consultant do to achieve the desired impact?

- A. Filter Category by using a Context Filter instead of a Dimension Filter.
- B. Create an aggregate expression, and then use that instead of the table calculation.
- C. Filter Category by using a Data Source Filter instead of a Dimension Filter.
- **D. Create a FIXED Level of Detail (LOD) expression, and then use that instead of the table calculation.**

Antwort: D

Begründung:

Comprehensive and Detailed Explanation From Exact Extract:

The key detail of the question:

"filter out particular categories, but wants the percent of total calculation to remain steady even as they filter items in or out." This means the percent of total must ignore filters.

Table calculations always operate after filters, except table calc filters like "Filter on Table Calculation," and after dimension filters, so filtering categories directly will change the denominator.

Tableau's documented solution for "percent of total that does not change with filtering" is:

Use a FIXED LOD to define the stable denominator

A FIXED LOD expression "freezes" the aggregation level and is unaffected by dimension filters unless explicitly added to context.

This allows the consultant to compute:

{ FIXED : SUM([Sales]) }

or

{ FIXED [Category] : SUM([Sales]) }

Then percent of total becomes:

SUM([Sales]) / { FIXED : SUM([Sales]) }

The FIXED LOD stores the total before filters are applied, ensuring the percent remains steady.

This is exactly what Tableau documentation explains under:

* Level of Detail Expressions

* LODs and Order of Operations

* Using LODs to create filter-independent calculations

Thus, D is correct.

Why the other answers are wrong:

A. Context Filter

Context filters run before FIXED LODs but after raw data.

If Category is put into context, LOD totals would be reduced.

Table calculation totals still change because table calcs run near the bottom of the pipeline.

B. Data Source Filter

Data source filters remove rows before all table calculations and LODs.

This would make the percent of total incorrect, because filtered-out categories would physically be gone.

C. Aggregate Expression

An aggregate field alone does not solve the issue because it still respects dimension filters.

101. Frage

A client wants to count all the distinct orders placed in 2010. They have written the following calculation, but the result is incorrect. IF YEAR([Date])=2010 THEN COUNTD ([OrderID]) END

Which calculation will produce the correct result?

- A. IF YEAR([Date])=2010 THEN {COUNTD ([OrderID])} END
- B. COUNT(IF YEAR([Date])=2010 THEN [OrderID] END)
- C. IF MIN(YEAR([Date]))=2010 THEN WINDOW_COUNTD([OrderID]) END
- **D. COUNTD(IF YEAR([Date])=2010 THEN [OrderID] END)**

Antwort: D

Begründung:

The correct calculation to count all distinct orders placed in 2010 involves placing the conditional inside the aggregation function, not the other way around. Here's how to correct the client's calculation:

Original Calculation Issue: The client's original calculation attempts to apply the COUNTD function within an IF statement, which does not work as expected because the COUNTD function cannot conditionally count within the scope of the IF statement.

Correct Calculation: COUNTD(IF YEAR([Date]) = 2010 THEN [OrderID] END). This calculation checks each order date; if the year is 2010, it returns the OrderID. The COUNTD function then counts all unique OrderIDs that meet this condition.

Why It Works: This method ensures that each order is first checked for the year condition before being counted, effectively filtering and counting in one step. It efficiently processes the data by focusing the distinct count operation only on relevant records.

References

This approach is consistent with Tableau's guidance on using conditional logic inside aggregation functions for accurate and efficient data calculations, as detailed in the Tableau User Guide under "Aggregations and Calculations".

102. Frage

A client requests a published Tableau data source that is connected to SQL Server. The client needs to leverage the multiple tables option to create an extract. The extract will include partial data from the SQL Server data source.

Which action will reduce the amount of data in the extract?

- A. Set up the extract as an incremental refresh.
- **B. Use an extract filter.**
- C. Aggregate the extract to the visible dimensions.
- D. Define the filters by using custom SQL.

Antwort: B

Begründung:

Using an extract filter is an effective way to reduce the amount of data in a Tableau extract. Extract filters allow you to specify a subset of the data to include, which can significantly decrease the size of the extract by excluding unnecessary data. This is particularly useful when you only need partial data from a larger SQL Server data source.

References: The recommendation to use extract filters to reduce data size is supported by Tableau's best practices for optimizing extracts. These practices suggest keeping the extract's data set short through filtering¹. Additionally, discussions in the Tableau Community confirm that hiding fields and using extract filters before extracting data can help reduce the extract size².

When dealing with large datasets in SQL Server and needing to create a manageable extract in Tableau, using an extract filter is the most direct and effective method to limit the data included:

Extract Filter: This involves setting filters that apply directly when the data is extracted from the source. This means that only the data meeting the specified criteria will be extracted and loaded into Tableau, significantly reducing the size of the extract.

To apply an extract filter, in the Data Source page in Tableau, drag the fields you want to filter by to the Filters shelf. Then, configure the desired filter criteria. When you create the extract, choose the option to "Add Filters to Extract" and select the configured filters. This ensures that only the data that meets these conditions is extracted from the SQL Server.

This approach not only minimizes the data volume but also speeds up performance in Tableau because it processes a smaller subset of the full dataset.

References

This procedure is described in detail in Tableau's help documentation on managing extracts and optimizing performance by using extract filters, which is recommended for scenarios involving large datasets or when specific subsets of data are required for analysis.

103. Frage

A consultant plans a Tableau deployment for a client that uses Salesforce. The client wants users to automatically see Tableau views of regional sales filtered by customer as soon as the users sign into Salesforce.

Which approach should the consultant use to deliver the final visualization?

- **A. Embed views into Salesforce.**
- B. Publish to Tableau Mobile for viewing.
- C. Create a list of URLs that the users can click in Salesforce.
- D. Create subscriptions for each view to deliver reports by email.

Antwort: A

Begründung:

To ensure that users automatically see Tableau views of regional sales filtered by customer as they sign into Salesforce, embedding

the views directly into Salesforce is most effective:

Embedding Views: Tableau provides capabilities to embed its dashboards into web applications such as Salesforce. This approach ensures that the visualization is part of the Salesforce user interface, enhancing user experience by not requiring users to navigate away from Salesforce to view the data.

Implement this by using Tableau's embedding code, which can be generated from the Tableau Server for each specific view. Place this embed code into the Salesforce Visualforce pages or use Salesforce Canvas to integrate these views seamlessly.

This setup allows the Tableau views to inherit user credentials from Salesforce, enabling personalized data visualization based on the user's access rights and region, directly aligned with their Salesforce login session.

References

The embedding technique is documented in both Tableau's and Salesforce's official integration guides, which provide step-by-step instructions on embedding Tableau views into Salesforce platforms.

104. Frage

.....

IT-Industrie entwickelt sich sehr schnell und die Angestellten in dieser Branche werden mehr gefordert. Wenn Sie nicht ausscheiden möchten, ist das Bestehen der Salesforce Analytics-Con-301 Prüfung notwendig. Vielleicht haben Sie Angst davor, dass Sie die in der Salesforce Analytics-Con-301 durchfallen, auch wenn Sie viel Zeit und Geld aufwenden. Dann lassen wir Fast2test Ihnen helfen! Zahllose Benutzer der Salesforce Analytics-Con-301 Prüfungssoftware geben wir die Konfidenz, Ihnen zu garantieren, dass mit Hilfe unserer Produkte werden Ihr Bestehen der Salesforce Analytics-Con-301 gesichert sein!
