ACA-100題庫資訊，ACA-100考試重點

言行一致是成功的開始，既然你選擇通過苛刻的IT認證考試，那麼你就得付出你的行動，取得優異的成績獲得認證，KaoGuTi Appian的ACA-100考試培訓資料是通過這個考試的最佳培訓資料，有了它就猶如有了了一個成功的法寶，KaoGuTi Appian的ACA-100考試培訓資料是百分百信得過的培訓資料，相信你也一定是百分百能通過這次考試的。

最新的 Appian Certification Program ACA-100 免費考試真題 (Q40-Q45):

問題 #40

According to best practices, which two types of tests should be considered during user acceptance testing (UAT)?

- A. Functional testing
- B. Platform security testing
- C. Load testing
- D. Regulation acceptance testing

答案：A,D

解題說明：

Regulation Acceptance Testing (C): During User Acceptance Testing (UAT), it is essential to ensure that the application complies with industry regulations and standards. Regulation acceptance testing focuses on verifying that the system adheres to legal and compliance requirements specific to the industry or region where the application will be used. This ensures that the application meets

all necessary regulatory guidelines before going live. Appian Documentation - Testing and Validation Functional Testing (D): Functional testing is a critical component of UAT as it verifies that the application's functionality works as expected from the end-user's perspective. This includes validating that all features, workflows, and business processes perform correctly according to the specified requirements. UAT is the final phase where end-users interact with the application to confirm that it meets their needs and performs as intended. Appian Documentation - Functional Testing Note: Load testing (A) and platform security testing (B) are important types of tests but are usually conducted during performance and security testing phases rather than UAT. UAT focuses more on ensuring the application meets business requirements and end-user expectations.

問題 #41

What are three of Appian's core capabilities?

- A. Automating business processes with complex workflow
- B. Accommodating applications that need to run completely offline
- C. Connecting to database management systems (e.g., Oracle, MySQL, Microsoft SQL Server)
- D. Designing effective user interfaces by combining available UI components
- E. Building highly-interactive reporting or data exploration applications

答案: A,C,D

解題說明:

Connecting to Database Management Systems (C): One of Appian's core capabilities is its ability to connect with various database management systems. This allows for seamless data integration, retrieval, and management, enabling applications to interact with databases like Oracle, MySQL, and Microsoft SQL Server, among others. Appian Documentation - Database Connections Designing Effective User Interfaces by Combining Available UI Components (D): Appian provides a wide range of UI components that can be combined to design effective and user-friendly interfaces. This capability allows developers to create intuitive and interactive applications that meet user requirements. Appian Documentation - User Interface Design Automating Business Processes with Complex Workflow (E): Appian excels in automating business processes, especially those that involve complex workflows. Its workflow automation capabilities allow for the orchestration of tasks, approvals, and other process activities, making it a powerful tool for process-driven applications. Appian Documentation - Workflow Automation Note: Building highly-interactive reporting or data exploration applications (A) is possible in Appian, but it's not the platform's primary focus. Accommodating applications that need to run completely offline (B) is not one of Appian's core capabilities, as it is primarily designed for online, connected applications.

問題 #42

During a development sprint, a new issue is identified and raised to the team. What should you ask the Product Owner to do?

- A. Add the new issue to the current sprint scope
- B. Add the new issue in the next sprint
- C. Modify the sprint plan to swap a completed story with the new issue
- D. Evaluate the severity of the issue and re-prioritize the sprint if needed

答案: D

解題說明:

When a new issue is identified during a sprint, it is essential to evaluate its impact on the current sprint's goals and priorities. The Product Owner should assess the severity and importance of the issue. If it is critical, they may need to re-prioritize the sprint backlog and adjust the sprint scope accordingly. This approach ensures that the development team focuses on delivering the highest value to the project. Simply adding the issue to the current sprint or the next sprint without proper evaluation could disrupt the sprint's progress and lead to inefficiencies. Appian Documentation - Agile Methodology in Appian Projects

問題 #43

Improvements are being considered for an Expense Process, and you have been asked to capture that there is now an approval task sent to the finance manager.

As part of the approval, the process should also reflect that if the payment has not been authorized within 48 hours, a reminder message is sent to the finance manager to inform them they have an outstanding task.

Which Business Process Model and Notation (BPMN) notation type would you use to illustrate the reminder message?

- A. Intermediate event
- B. Start event
- C. Data object
- D. Gateway

答案： A

解題說明：

In BPMN, an intermediate event is used to indicate events that occur between the start and end of a process. To model a reminder message that is sent if the payment is not authorized within 48 hours, an intermediate event, specifically a timer intermediate event, is the appropriate notation.

Intermediate Event Overview:

An intermediate event can be used to model actions such as delays, triggers, or messages that happen during the course of a process.

A timer intermediate event would be used to trigger the reminder after a set period (in this case, 48 hours).

Why Not Other Options?:

- A . Data Object: Represents data stored or used by the process, not an event or action.
- B . Gateway: Used for decision points or branching paths, not for triggering events.
- D . Start Event: Marks the beginning of a process and cannot be used mid-process.

References:

Appian Documentation on BPMN Events: BPMN Events

Using an intermediate event ensures that the process can trigger the reminder at the right time, enhancing process automation and efficiency.

問題 #44

When writing a user story, which statement best represents the standard format?

- A. "As a user, I want the application to integrate with 3rd party systems."
- B. "As an Investor, I want to see a summary of my investment accounts so that I can decide where to focus my attention."
- C. "As a user, I want to delete a photo and upload a new one."
- D. "As a marketing manager, I want reports on my client base so that I can access them via a dashboard."

答案： B

解題說明：

The standard format for writing user stories follows a specific structure: "As a [role], I want [goal] so that [benefit]." This format ensures that the user story captures who the user is, what they want to achieve, and why it is important.

User Story Format:

Role: The user role that is relevant to the story.

Goal: The specific action or feature the user desires.

Benefit: The reason why this feature or action is valuable to the user.

Example Explanation:

The correct example, "As an Investor, I want to see a summary of my investment accounts so that I can decide where to focus my attention," perfectly fits the standard format. It specifies the user role (Investor), the goal (seeing a summary of accounts), and the benefit (deciding where to focus attention).

Why Not Other Options?:

A and D lack clarity on the benefit or the user's role, making them less effective as user stories.

B is close but is more detailed than the standard format, making it less concise.

References:

Appian Agile Practices Guide: Writing Effective User Stories

Using the standard format for user stories helps ensure that the development team clearly understands the user's needs and the value of the feature being requested.

問題 #45

.....

成千上萬的IT考生通過使用我們的產品成功通過考試， Appian ACA-100考古題質量被廣大考試測試其是高品質的。我們從來不相信第二次機會，因此給您帶來的最好的Appian ACA-100考古題幫助您首次就通過考試， 并取得不錯的成績。KaoGuTi網站幫助考生通過ACA-100考試獲得認證，不僅可以節約很多時間，還能得到輕鬆通過

ACA-100考試的保證，這是IT認證考試中最重要的一項考試之一。
