

# TRY Juniper JN0-460 DUMPS - SUCCESSFUL PLAN TO PASS THE EXAM

P.S. Free & New JN0-460 dumps are available on Google Drive shared by Itcertmaster: [https://drive.google.com/open?id=16vgU8-nPLkRHEVT\\_xnh2-Q93s9c0btoi](https://drive.google.com/open?id=16vgU8-nPLkRHEVT_xnh2-Q93s9c0btoi)

Itcertmaster's JN0-460 certification is a dispensable part in IT area. So how can we achieve it in a short time? Itcertmaster will be your choice. JN0-460 test training materials of Itcertmaster are organized by experienced IT experts. If you still worry, you can download JN0-460 free demo before purchase.

## Juniper JN0-460 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none"> <li>Wired Assurance Provisioning or Deployment: This section of the exam measures the skills of Network Deployment Specialists and focuses on the provisioning and deployment processes of Wired Assurance. It includes the essential steps and options involved in setting up networks, from configuration templates to deployment methodologies. Candidates learn about provisioning procedures, supported architectures, and the use of site variables to streamline automation and consistency across wired infrastructures.</li> </ul>
Topic 2	<ul style="list-style-type: none"> <li>Campus EVPN-VXLAN: This section of the exam measures the skills of Data Center Network Engineers and explores the key principles of VXLAN and EVPN technologies. Candidates learn about Layer 2 tunneling, data and control plane operations, and the functions of VTEPs and VXLAN gateways. Additionally, it covers advanced EVPN concepts such as multipath routing, route types, and identifiers. The section concludes with a focus on MAC learning and policy applications to ensure efficient, scalable, and resilient network fabrics.</li> </ul>
Topic 3	<ul style="list-style-type: none"> <li>Wired Assurance Management or Operations: This section of the exam measures the skills of Network Operations Engineers and focuses on the management and operational aspects of Wired Assurance. It covers switch management, port profiles, and dynamic port configuration to ensure optimal network performance. The section also explores service-level expectations, client insights, and the use of APIs for improved monitoring and automation. Candidates gain an understanding of how MistAI enables proactive management and predictive troubleshooting to maintain service quality.</li> </ul>

Topic 4	<ul style="list-style-type: none"> <li>• <b>Campus Fabric Architecture:</b> This section of the exam measures the skills of Network Design Engineers and focuses on understanding and deploying Campus Fabric Architectures. It introduces essential design concepts such as EVPN multihoming, IP Clos architecture, and micro-segmentation. The section also compares CRB and ERB models, explains scaling requirements, and highlights how the Campus Fabric Core-Distribution design supports high-performance, scalable, and secure enterprise networks.</li> </ul>
Topic 5	<ul style="list-style-type: none"> <li>• <b>Wired Assurance Fundamentals:</b> This section of the exam measures the skills of Network Support Engineers and covers the foundational elements of Wired Assurance within the Mist AI ecosystem. It introduces candidates to key concepts such as supported devices, solution architecture, and the main features and components that define Wired Assurance functionality. Additionally, it highlights how Mist AI accounts, analytics, and subscriptions integrate to deliver intelligent insights for network performance and operations.</li> </ul>

### Maximize Your Chances of Getting JN0-460

Whether you are at home or out of home, you can study our JN0-460 test torrent. You don't have to worry about time since you have other things to do, because under the guidance of our JN0-460 study tool, you only need about 20 to 30 hours to prepare for the exam. Sincere and Thoughtful Service Our goal is to increase customer's satisfaction and always put customers in the first place. As for us, the customer is God. We provide you with 24-hour online service for our JN0-460 Study Tool. If you have any questions, please send us an e-mail. We will promptly provide feedback to you and we sincerely help you to solve the problem.

### Juniper Mist AI Wired, Specialist (JNCIS-MistAI-Wired) Sample Questions (Q82-Q87):

#### NEW QUESTION # 82

Which statement is correct about the Switch Insights section?

- A. Users can rollback to a previously known configuration from this page.
- **B. A user can view traffic per port on this page.**
- C. Only the top five switch events are available on this page.
- D. The Switch Insights feature is only available for EX Series switches.

**Answer: B**

Explanation:

The Switch Insights section in the Mist dashboard provides detailed switch telemetry, including interface statistics, port utilization, client count, and traffic analysis. It allows administrators to view real-time and historical traffic per port, identify top talkers, and detect anomalies.

"The Switch Insights page displays real-time and historical data such as traffic per port, PoE usage, connected clients, and interface errors for every switch managed by Mist." Option A: Correct - port-level traffic and utilization metrics are visible in Switch Insights.

Option B: Incorrect - available for all Mist-managed switches (EX and supported QFX).

Option C: Incorrect - displays complete event history, not limited to five events.

Option D: Incorrect - configuration rollback is done via the configuration history section, not Switch Insights.

#### NEW QUESTION # 83

In a Campus Fabric setup, micro-segmentation helps to \_\_\_\_\_.

- A. Simplify network design
- B. Reduce security
- C. Increase broad network access

- **D. Isolate workloads**

**Answer: D**

#### NEW QUESTION # 84

What is the purpose of an EVPN Type 4 route?

- A. to provide MAC advertisement
- B. to provide BUM flooding
- C. to provide a mass withdraw
- **D. to provide a designated forwarder election**

**Answer: D**

Explanation:

According to Juniper Networks' EVPN documentation, an EVPN Type 4 route, also known as an Ethernet Segment route, is a critical component of the BGP EVPN control plane used specifically in multihoming scenarios. When a Customer Edge (CE) device is connected to two or more Provider Edge (PE) routers via a Link Aggregation Group (LAG), these PE routers must coordinate to manage traffic flow and prevent network loops.

The primary purpose of the Type 4 route is to enable Designated Forwarder (DF) election. In a multihomed Ethernet Segment (identified by a unique Ethernet Segment Identifier or ESI), only one PE router—the Designated Forwarder—is permitted to forward Broadcast, Unknown unicast, and Multicast (BUM) traffic from the EVPN core to the CE device. Without this election process, multiple PE routers would forward the same BUM packets to the CE, leading to traffic duplication and potential broadcast storms. The workflow begins when a PE router is configured with an ESI on a physical or logical interface; it then generates and advertises a Type 4 route to all other PE routers in the network. This route carries the ESI and an "ES-import" extended community, which allows other PEs connected to the same segment to automatically discover their peers. Once these "peering" PEs are discovered, they collectively execute a DF election algorithm—such as the default modulo-based algorithm or the newer preference-based algorithm—to select the DF and Backup Forwarder (BDF) for each VLAN or bridge domain. By ensuring a deterministic and synchronized selection of the forwarder, Type 4 routes provide the foundational stability required for active-active and active-standby multihoming in modern campus and data center fabrics.

#### NEW QUESTION # 85

When deploying wired assurance, which of the following deployment options is best suited for a dynamic environment with frequent configuration changes?

- A. Manual switch configuration
- B. Fixed network architecture
- C. Static IP assignment
- **D. Template-based provisioning**

**Answer: D**

#### NEW QUESTION # 86

You are asked to identify whether your wired network is experiencing issues with jitter.

Which Juniper Mist Wired Assurance service-level expectation (SLE) metric provides these details?

- **A. Throughput**
- B. Switch Health
- C. Successful Connect
- D. Capacity

**Answer: A**

Explanation:

In Juniper Mist Wired Assurance, SLEs (Service Level Expectations) measure key performance indicators for wired network quality. Throughput SLE monitors data transfer quality, including latency, jitter, and packet loss, which directly impact real-time applications such as voice or video.

"The Throughput SLE provides visibility into end-to-end network performance by tracking latency, jitter, and packet loss, helping
