CompTIA Tech+ Certification Exam 認定 FC0-U71 試験問題 (Q28-Q33):

質問 # 28

A group wants to store data while collaborating on a project. Which of the following is the best option to enable high availability of the data?

- A. External hard drive
- B. Flash drive
- C. Cloud storage
- D. Local backup

正解: C

解説:

Cloud storage provides high availability, allowing multiple users to access and collaborate on data anytime and from anywhere with an internet connection.

質問 # 29

Which of the following is an example of a MAC address?

- A. fe80:102d:cd62:5434:82ae
- B. 192.68.10.24
- C. 0x3476
- D. 00:50:09:2D:4D:94

正解: D

解説:

A MAC (Media Access Control) address is a hardware address assigned to a network interface card. It follows a 48-bit hexadecimal format usually displayed as six pairs separated by colons or hyphens:

"MAC addresses typically appear as 00:50:09:2D:4D:94."

192.68.10.24 is an IPv4 address, fe80:102d:cd62:5434:82ae is an IPv6 address, and 0x3476 is simply a hexadecimal number, not a MAC address.

質問 # 30

A school needs a solution that gives all workstations a short period of time to save work during power outages. Which of the following is the best solution?

- A. Cloud
- **B. UPS**
- C. File server
- D. External drive

正解: B

解説:

The correct answer is C. UPS. A UPS, or uninterruptible power supply, provides temporary battery power during a power outage. This gives users or systems enough time to save work and shut down safely. Cloud storage, external drives, and file servers can store data, but they do not provide temporary power during an outage.

Exact Extract/Reference: The CompTIA Tech+ Study Guide defines a UPS as "a battery backup system" and states that during a power outage or brownout, it can supply power "for a limited amount of time and provide for a graceful shutdown." The guide also states that if power fails, UPS batteries can power the computer long enough for the administrator to safely power it down.

質問 # 31

A technician identifies the potential cause of a problem. Which of the following troubleshooting steps should the technician take next?

- A. Verify system functionality.
- **B. Test the theory.**
- C. Document the findings.
- D. Create a plan of action.

正解: B

解説:

After identifying the potential cause of a problem, the next step is to test the theory to confirm if the suspected cause is correct before proceeding with a solution.

Other options:

*Create a plan of action and verify system functionality come after confirmation,

*Document the findings is done after resolution.

質問 # 32

Which of the following has no impact on the outcome of the code?

- A. Booleans
- B. Variables
- **C. Comments**
- D. Strings

正解: C

解説:

Comments are ignored by the compiler or interpreter and do not affect the execution or outcome of the code.
