Valid Mule-Dev-202 Test Topics, Mule-Dev-202 New Dumps Book

We have the Mule-Dev-202 Questions and answers with high accuracy and timely update. Our professional team checks Mule-Dev-202 answers and questions carefully with their professional knowledge. We also have the latest information about the exam center, and will update the version according to the new requirements. Pass guarantee and money back guarantee are also our principles, and if you have any questions, you can also consult the service stuff.

If you want to become a future professional person in this industry, getting qualified by Salesforce certification is necessary. Now, pass your Mule-Dev-202 actual exam in your first time by the help of Dumps4PDF study material. Our Mule-Dev-202 pdf torrent contains the best relevant questions and verified answers which exactly matches with the Mule-Dev-202 Actual Exam and surely helps you to pass the exam. Besides, one year free update of Mule-Dev-202 practice torrent is available after purchase.

Pass-Sure Valid Mule-Dev-202 Test Topics & Leading Offer in Qualification Exams & Marvelous Salesforce Salesforce Certified MuleSoft Hyperautomation Developer

Don't worry because "Dumps4PDF" is here to save you from these losses with its updated and real Salesforce Mule-Dev-202 exam questions. We provide you with the latest prep material which is according to the content of Salesforce Mule-Dev-202 Certification

Exam and enhances your knowledge to crack the test. Dumps4PDF practice material is made by keeping in focus all the sections of the current syllabus.

Salesforce Certified MuleSoft Hyperautomation Developer Sample Questions (Q40-Q45):

NEW QUESTION # 40

A non-technical employee from AnyAirlines creates a hyperautomation solution. The solution needs to meet the following criteria:

The process needs to begin when a record is created in Salesforce.

Then, it needs to pass data to a pre-existing RPA process which includes a User Task for data integrity purposes.

The output of the RPA process needs to be used to create a record in NetSuite.

According to best practices, how should this automated process be structured?

- A. 1. A MuleSoft Composer flow triggers on the creation of the record and calls the RPA process.2. Then, a second MuleSoft Composer flow triggers when the RPA process is completed and creates a record in NetSuite.
- B. 1. A Salesforce flow triggers on the creation of the record and makes an outbound request to a MuleSoft Composer flow.2. Then, the same MuleSoft Composer flow calls the RPA process and uses the result to create a record in NetSuite.
- C. 1. A MuleSoft Composer flow triggers on the creation of the record and calls the RPA process.2. Then, the same flow uses the response to create a record in NetSuite.B 1. A Salesforce flow triggers on the creation of the record and calls too RPA process.2. Then, the same flow uses the response to create a record in NetSuite.

Answer: C

Explanation:

To structure the automated process to meet the given criteria, the following approach is recommended:

MuleSoft Composer Flow Triggers on Record Creation:

Use MuleSoft Composer to create a flow that is triggered when a new record is created in Salesforce. This is done by setting up a trigger event in MuleSoft Composer that listens for new record creation events in Salesforce.

Call the RPA Process:

Once the flow is triggered, it should call the pre-existing RPA process. MuleSoft Composer can invoke MuleSoft RPA bots, and you can pass the necessary data from the Salesforce record to the RPA process.

The RPA process will include the User Task for data integrity purposes.

Use the RPA Process Output to Create a Record in NetSuite:

After the RPA process completes, the MuleSoft Composer flow can capture the output from the RPA process.

The same MuleSoft Composer flow will then use this output to create a record in NetSuite, ensuring a seamless data transfer and process automation.

NEW QUESTION # 41

A MuleSoft developer at AnyAirlines wants to retrieve customer data from an external system.

Before designing a new integration, what should they use to determine if the integration exists and can be reused?

- A. Design Center
- B. Anypoint Studio
- C. MuleSoft Composer
- D. Anypoint Exchange

Answer: D

Explanation:

To determine if an integration exists and can be reused, the MuleSoft developer should use Anypoint Exchange:

Anypoint Exchange:

Anypoint Exchange is a repository where developers can publish, share, and discover reusable assets such as APIs, connectors, templates, and examples. It serves as a centralized location for all reusable components within the MuleSoft ecosystem.

By searching Anypoint Exchange, the developer can find existing integrations or assets that might fulfill the requirements for retrieving customer data, avoiding the need to design and develop a new integration from scratch.

NEW QUESTION # 42

Northern Trail Outfitters (NTO) uses Flow Orchestration to automate quote development. The "Review Quote" work item is performed by their team of technical writers but can be fulfilled by any technical writer on the team.

How can NTO ensure the "Review Quote" work item is assigned to the correct Salesforce user?

- A. Use backend steps to automate work item assignment to the next available technical writer.
- B. Use MuleSoft RPA to review the document and submit it for approval if no issues are found.
- C. Create a user collection variable and assign the work item to the user collection.
- D. Create a Group for the team of Salesforce Users and assign the work item to the group.

Answer: D

Explanation:

To ensure the "Review Quote" work item is assigned to the correct Salesforce user within the team of technical writers, the following approach can be used:

Creating a Group:

Create a Group in Salesforce that includes all the technical writers who are eligible to perform the "Review Quote" work item. This group acts as a collective resource pool.

Assigning the Work Item to the Group:

When the "Review Quote" work item is created in Flow Orchestration, assign it to the group rather than an individual user.

Salesforce will then allow any available technical writer within the group to pick up and complete the task.

Ensuring Flexibility and Availability:

This method ensures that the work item can be completed by any technical writer in the team, providing flexibility and improving the chances of timely completion by utilizing the group's collective availability.

NEW QUESTION # 43

AnyAirlines has a MuleSoft Composer flow between NetSuite and Salesforce. One of the data elements coming from NetSuite is a string that needs to be put into a Boolean field in a Salesforce object.

Which Composer function should be used to change the datatype of the value?

- A. substitute()
- B. fromStringToBoolean()
- C. today()
- D. fromBooleanToString()

Answer: B

Explanation:

To convert a string from NetSuite into a Boolean field in a Salesforce object within MuleSoft Composer, you should use thefromStringToBoolean()function:

Function Purpose:

ThefromStringToBoolean()function is specifically designed to convert string values to Boolean values. It interprets common Boolean strings like "true", "false", "yes", "no" and converts them into their corresponding Boolean values.

Usage:

Within MuleSoft Composer, use this function in a transformation step to ensure the data coming from NetSuite (as a string) is correctly transformed into a Boolean value before it is mapped to the Salesforce object.

Example:

If the string value from NetSuite is "true",fromStringToBoolean("true")will convert this totruein the Boolean field in Salesforce.

NEW QUESTION # 44

Any Airlines is developing a new integration and wants built-in automated testing.

Which tool must be used to satisfy this requirement?

- A. MuleSoft RPA
- B. Anypoint Platform
- C. Flow Orchestration
- D. MuleSoft Composer

Answer: B

Explanation:
To implement built-in automated testing for new integrations at Any Airlines, the Anypoint Platform is the appropriate tool.
Anypoint Platform Capabilities:
Automated Testing:Anypoint Platform includes various tools such as MUnit for automated testing of Mule applications. MUnit allows developers to create, design, and run tests natively within Anypoint Studio.
Test Automation Features:It supports comprehensive testing features including unit tests, integration tests, and mock services to ensure robust and reliable integrations.
Continuous Integration and Deployment:Anypoint Platform can be integrated with CI/CD pipelines, allowing automated tests to run as part of the deployment process, ensuring that any new code changes do not break existing functionality.
Why Not Other Options:
MuleSoft RPA:Primarily used for automating repetitive manual tasks, not for testing integrations.
MuleSoft Composer:Focuses on low-code integrations and automation, not specifically designed for automated testing.
Flow Orchestration:While useful for process automation within Salesforce, it does not provide the testing capabilities required for MuleSoft integrations.
References:
For detailed information on automated testing with Anypoint Platform and MUnit, refer to the official MuleSoft documentation

NEW QUESTION # 45

......

It's time to take the Salesforce Mule-Dev-202 practice test for self-assessment once you have prepared with Mule-Dev-202 PDF questions. Taking Dumps4PDF's web-based Salesforce Mule-Dev-202 practice test is the best method to feel the real Salesforce Mule-Dev-202 Exam scenario. Dumps4PDF offers the customizable web-based Salesforce Mule-Dev-202 practice test that is compatible with all browsers like MS Edge, Chrome, Firefox, etc.
