- A. Dielectric strength
- **B. Flash point**
- C. Fire point
- D. Pour point

Answer: B

Explanation:

The flash point indicates the minimum temperature at which an insulating liquid emits enough vapor to form an ignitable mixture with air. The breaking capacity of a circuit breaker is typically expressed in:

- **A. Amperes**
- B. Volts
- C. Ohms
- D. Watts

Which portion of a three-phase system carries current through the windings of a transformer or motor?

- A. Neutral current
- B. Line current

Answer: C

Explanation:

Phase current is the current that flows through each individual winding of a three-phase device such as a transformer or motor. Understanding the difference between phase current and line current is critical because their magnitudes differ depending on whether the system is configured as wye or delta.
