## Free PDF Quiz Adobe AD0-E725 - Adobe Commerce Developer Expert Marvelous Real Dump

Our AD0-E725 training guide always promise the best to service the clients. We are committing in this field for many years and have a good command of the requirements of various candidates. Carefully testing and producing to match the certified quality standards of AD0-E725 Exam Materials, we have made specific statistic researches on the AD0-E725 practice materials. And our pass rate of the AD0-E725 study engine is high as 98% to 100%.

## Adobe Commerce Developer Expert Sample Questions (Q15-Q20):

**NEW QUESTION # 15**
A client requests changes to their Pro Staging and Production environments. They supply a Developer with different domains for new websites to be created with the goal of expanding operations to multiple countries, doubling the current number of SKUs, and adding more customer groups.
Which two issues should the Developer anticipate based on the requested changes? (Choose two.)

- A. Catalog data expands as the number of websites and stores are increased.
- B. Multiple websites may require duplicating custom functionality for each store, which increases code redundancy.
- C. Recreate hierarchy navigation for every new website.
- D. Additional stores can lead to a longer indexing process and slower response times for noncached catalog pages.

**Answer: A,D**

**NEW QUESTION # 16**

A Developer is working on an Adobe Commerce store, and the security team has flagged certain inline scripts in the store as vulnerable to potential attacks. The Developer decides to implement Content Security Policies (CSP) to secure the store's environment.

What will the Developer achieve by taking this action?

- A. Ensure that all user input is sanitized before being processed by the application.
- B. Prevent users from accessing certain areas of the website based on their IP address.
- C. Restrict which resources (scripts, styles, images) are allowed to load on the website.

**Answer: C**

Explanation:

Comprehensive and Detailed Explanation (with official references):

The correct answer is C. Restrict which resources (scripts, styles, images) are allowed to load on the website.

Adobe Commerce supports Content Security Policy (CSP), a browser-level security feature that mitigates certain types of attacks such as Cross-Site Scripting (XSS) and data injection attacks.

By defining a CSP in Adobe Commerce, developers can control:

* Which scripts can be executed (script-src).

* Which stylesheets can be applied (style-src).

* Which images and media can be loaded (img-src, media-src).

* Whether inline scripts or styles are allowed.

This does not sanitize user input (A) nor restrict user access based on IP addresses (B). Instead, it focuses on restricting the sources of content that the browser can load.

Official Documentation Extracts:

* "Content Security Policy (CSP) is an added layer of security that helps to detect and mitigate certain types of attacks, including Cross-Site Scripting (XSS) and data injection attacks. CSP works by restricting the sources from which content can be loaded."- Adobe Commerce DevDocs: Content Security Policy

* "A CSP allows developers to define approved sources of content that browsers can load. These policies help reduce the risk of malicious content injection in Magento storefronts."- Adobe Commerce Security Guide

**NEW QUESTION # 17**

A Developer connects to the Magento-Cloud CLI and creates a new branch for environment using the following Git command:

git checkout -b <branch-name>

The developer notices the branch is not activated and does not automatically build when changes are pushed to the remote environment.

Which solution will fix this issue?

- A. git branch -b <branch-name> should be used instead of Git checkout.
- B. magento-cloud environment:branch <branch-name> should be used instead of Git commands.
- C. magento-cloud environment:redeploy --no-wait should be executed after branch creation.

**Answer: B**

Explanation:

In Adobe Commerce Cloud, simply creating a Git branch locally does not automatically create a corresponding Cloud environment.

The correct way is to use:

magento-cloud environment:branch <branch-name>

This ensures the environment is created in Cloud, builds automatically, and is linked to the new Git branch.

B redeploys an existing environment but does not create one.

C is just another Git command and does not activate the environment.

Adobe Commerce Cloud DevDocs - Manage environments

**NEW QUESTION # 18**

A client recently started using the new Adobe Live Search functionality. They report an issue with content from the website, such as CMS blocks, not returning with the search result.

A Developer is asked to investigate because the client wants this content to be part of the data pool of Live Search.

How should the Developer respond to the client?

- A. Extend the class Magento\LiveSearchAdapter\Model\Attribute\Metadata.
- B. Advise the client to enable content for Live Search from the admin panel.
- C. Share documentation regarding the limitations of Live Search.

**Answer: C**

Explanation:

Adobe Live Search is designed to handle catalog product data only. It does not index or return CMS content such as blocks or pages. This is a known limitation of Live Search.

B is invalid because there is no admin setting to enable CMS content in Live Search.

C is not a supported solution; extending Live Search classes will not include CMS content.

Adobe Commerce DevDocs - Live Search limitations

## NEW QUESTION # 19

A Developer working on a Magento 2 store needs to modify the Content Security Policy (CSP) to allow loading of images from a trusted external domain while maintaining strict policies for other resources. To accomplish this, the csp_whitelist.xml file must be updated.

Which code snippet should the Developer use to update the CSP configuration?

- A. <policies>
  <policy id="default-src">
  <values>
  <value id="trusted_image" type="host">website.com</value>
  </values>
  </policy>
  </policies>
- B. <csp>
  <policies>
  <policy id="media-src">
  <values>
  <value id="trusted_image" type="host">website.com</value>
  </values>
  </policy>
  </policies>
  </csp>
- C. <policies>
  <policy id="img-src">
  <values>
  <value id="trusted_image" type="host">website.com</value>
  </values>
  </policy>
  </policies>

**Answer: C**

Explanation:

To allow loading of external images, the policy that must be updated is img-src in the csp_whitelist.xml.

Option A (default-src) is too broad and not best practice.

Option C (media-src) applies only to audio/video sources, not images.

Thus, B is the correct solution.
