## High C_CPI_2506 Passing Score, Study C_CPI_2506 Demo

It is browser-based; therefore no need to install it, and you can start practicing for the SAP Certified Associate - Integration Developer (C_CPI_2506) exam by creating the SAP Certified Associate - Integration Developer (C_CPI_2506) practice test. Our SAP Certified Associate - Integration Developer (C_CPI_2506) exam dumps give help to give you an idea about the actual SAP C_CPI_2506 Exam. You can attempt multiple SAP Certified Associate - Integration Developer (C_CPI_2506) exam questions on the software to improve your performance.

## SAP Certified Associate - Integration Developer Sample Questions (Q61-

# Q66):

## NEW QUESTION # 61

You use an APiKey for authentication in an HTTPS API call.In which part of the Content Modifier is the APIKey included?

- A. Message header
- B. Exchange property
- C. Message body
- D. Attachment

**Answer: A**

Explanation:
When using API Key authentication for HTTP(S) calls in SAP Integration Suite:
The API Key is typically included in the HTTP header (e.g., APIKey: <value> or x-api-key: <value>).
Message headers are configured in the Content Modifier for outbound requests.
Other options:
Attachment # Used for file handling, not authentication.
Message body # Contains payload, not credentials.
Exchange property # Used internally within the flow, not sent externally.
Thus, the API Key must be placed in the Message header.

## NEW QUESTION # 62

Which expression language can you use to access the content of a message in an integration flow?

- A. Simple expression language
- B. XML expression language
- C. Spring expression language
- D. JavaScript expression language

**Answer: A**

Explanation:
To access the content of a message in an integration flow, you can use the Simple expression language. The Simple expression language is a subset of the expressions defined in Camel Simple Expression Language, which is a language for accessing and manipulating message contents and exchange properties in Apache Camel integration framework. The Simple expression language supports various built-in variables, functions, operators, and literals that can be used to construct expressions for different purposes, such as routing conditions, content modification, variable assignment, and so on. You can use the Simple expression language when configuring components that support expressions, such as content modifier, router, filter, write variables, and so on. Reference: Using Camel Simple Expression Language | SAP Help Portal, Get to know Camel's Simple expression language in SAP Cloud Integration | SAP Blogs

## NEW QUESTION # 63

In a Data Store write operation, you want to set an Entry ID by reading a header value from an incoming message.Which notation do you use to implement this?

- A. S${headerreceiver}
- B. S{reaciverheader}
- C. S{reaciverheader}
- D. ${header.receiver}

**Answer: D**

Explanation:
In SAP Cloud Integration, dynamic configuration values (headers, properties, body elements) are accessed using Expression Language (EL) notation:
${header.<headerName>} # Accesses a message header value.
${property.<propertyName>} # Accesses a message property.
${body} # Accesses the payload.

Therefore, when you want to set an Entry ID in a Data Store Write operation using a header value, the correct syntax is ${header.receiver}.

## NEW QUESTION # 64

In which of the following must you call getBody() to access the payload in a Groovy script?

- A. property
- B. message
- C. camelcontext
- D. header

**Answer: B**

Explanation:
To access the payload in a Groovy script, you must use the message object and call the getBody() method on it. The message object represents the current message that is being processed in the integration flow. It has methods to get and set the message body, headers, properties, and attachments. The getBody() method returns the message body as an object of the specified type, such as java.lang.String, java.io.InputStream, or org.w3c.dom.Document. Reference: General Scripting Guidelines | SAP Help Portal, Message | SAP Help Portal

## NEW QUESTION # 65

Which functionalities are used by OData?

- A. SOAP, AtomPub, and JSON
- B. HTTP. AtomPub, and JSON
- C. TCP. AtomPub, and JSON

**Answer: B**

Explanation:
OData uses HTTP, AtomPub, and JSON as its core functionalities. OData is an open protocol that allows the creation and consumption of queryable and interoperable RESTful APIs in a simple and standard way. OData builds on HTTP as the application protocol for transferring data between clients and servers. OData uses AtomPub as one of the formats for representing data feeds and entries in XML. OData also uses JSON as another format for representing data feeds and entries in a lightweight and human-readable way.
